Contents

Part I In General 1

Chapter 1 What this Book Is About and How to Read It 3

- 1.1 “Exercises” vs. “Problems” 3
- 1.2 The Three Levels of Problem Solving 5
 - A Mountaineering Analogy 5
 - From Mountaineering to Mathematics 6
- 1.3 A Problem Sampler 8
 - Recreational Problems 8
 - Contest Problems 9
 - Open-Ended Problems 11
- 1.4 How to Read This Book 13

Chapter 2 Strategies for Investigating Problems 15

- 2.1 Psychological Strategies 16
 - Mental Toughness: Learn from Pólya’s Mouse 16
 - Creativity 19
 - Problems and Exercises 25
- 2.2 Strategies for Getting Started 29
 - The First Step: Orientation 29
 - I’m Oriented. Now What? 30
 - Problems and Exercises 40
- 2.3 Methods of Argument 44
 - Common Abbreviations and Stylistic Conventions 45
 - Deduction and Symbolic Logic 46
 - Argument by Contradiction 46
 - Mathematical Induction 50
 - Problems and Exercises 55
- 2.4 Other Important Strategies 58
 - Draw a Picture! 59
 - Pictures Don’t Help? Recast the Problem in Other Ways! 60
 - Change Your Point of View 64
 - Problems and Exercises 65

Chapter 3 Fundamental Tactics for Solving Problems 68

- 3.1 Symmetry 69
 - Geometric Symmetry 70
 - Algebraic Symmetry 74
 - Problems and Exercises 79
- 3.2 The Extreme Principle 82
 - Problems and Exercises 91
- 3.3 The Pigeonhole Principle 92
 - Basic Pigeonhole 92
 - Intermediate Pigeonhole 94
 - Advanced Pigeonhole 96
 - Problems and Exercises 100
- 3.4 Invariants 102
 - Parity 104
 - Modular Arithmetic and Coloring 110
 - Monovariants 112
 - Problems and Exercises 116

Chapter 4 Three Important Crossover Tactics 119

- 4.1 Graph Theory 119
 - Connectivity and Cycles 121
 - Eulerian and Hamiltonian Paths 123
 - The Two Men of Tibet 126
 - Problems and Exercises 128
- 4.2 Complex Numbers 131
 - Basic Operations 131
 - Roots of Unity 137
 - Some Applications 138
 - Problems and Exercises 141
- 4.3 Generating Functions 143
 - Introductory Examples 144
 - Recurrence Relations 145
 - Partitions 146
 - Problems and Exercises 152

Part II Specifics 155

Chapter 5 Algebra 157

- 5.1 Sets, Numbers, and Functions 157
 - Sets 157
 - Functions 159
 - Problems and Exercises 160
- 5.2 Algebraic Manipulation Revisited 162
 - The Factor Tactic 163
 - Manipulating Squares 164
 - Substitutions and Simplifications 165
 - Problems and Exercises 170
- 5.3 Sums and Products 171
 - Notation 171
 - Arithmetic Series 172
 - Geometric Series and the Telescope Tool 173
 - Infinite Series 175
 - Problems and Exercises 178
- 5.4 Polynomials 179
 - Polynomial Operations 180
 - The Zeros of a Polynomial 181
 - Problems and Exercises 188
- 5.5 Inequalities 189
 - Fundamental Ideas 190
 - The AM-GM Inequality 192
 - Massage, Cauchy-Schwarz, and Chebyshev 197
 - Problems and Exercises 202

Chapter 6 Combinatorics 205

- 6.1 Introduction to Counting 205
 - Permutations and Combinations 205
 - Combinatorial Arguments 208
 - Pascal's Triangle and the Binomial Theorem 209
 - Strategies and Tactics of Counting 212
 - Problems and Exercises 212
- 6.2 Partitions and Bijections 213
 - Counting Subsets 213
 - Information Management 216
 - Balls in Urns and Other Classic Encodings 220
 - Problems and Exercises 222

- 6.3 The Principle of Inclusion-Exclusion 225
 - Count the Complement 225
 - PIE with Sets 226
 - PIE with Indicator Functions 230
 - Problems and Exercises 232
- 6.4 Recurrence 233
 - Tiling and the Fibonacci Recurrence 234
 - The Catalan Recurrence 236
 - Problems and Exercises 239

Chapter 7 **Number Theory 243**

- 7.1 Primes and Divisibility 243
 - The Fundamental Theorem of Arithmetic 243
 - GCD, LCM, and the Division Algorithm 245
 - Problems and Exercises 249
- 7.2 Congruence 251
 - What's So Good About Primes? 253
 - Fermat's Little Theorem 253
 - Problems and Exercises 255
- 7.3 Number Theoretic Functions 257
 - Divisor Sums 257
 - Phi and Mu 259
 - Problems and Exercises 261
- 7.4 Diophantine Equations 263
 - General Strategy and Tactics 264
 - Problems and Exercises 269
- 7.5 Miscellaneous Instructive Examples 271
 - Can a Polynomial Always Output Primes? 271
 - If You Can Count It, It's an Integer 273
 - A Combinatorial Proof of Fermat's Little Theorem 273
 - Sums of Two Squares 274
 - Problems and Exercises 277

Chapter 8 **Calculus 282**

- 8.1 The Fundamental Theorem of Calculus 282
- 8.2 Convergence and Continuity 284
 - Convergence 285
 - Continuity 288
 - Uniform Continuity 289
 - Problems and Exercises 290

8.3	Differentiation and Integration	294
	Approximation and Curve Sketching	294
	The Mean Value Theorem	297
	A Useful Tool	300
	Integration	301
	Problems and Exercises	303
8.4	Power Series and Eulerian Mathematics	308
	Don't Worry!	308
	Taylor Series with Remainder	310
	Eulerian Mathematics	312
	Problems and Exercises	315

Appendix A Hints to Selected Problems 319
