# Contents

<b>Introduction</b>	<b>11</b>
<b>0 Geometry of Crystal Lattices</b>	<b>11</b>
0.1 Translational Symmetry . . . . .	11
0.2 Simple and Composite Crystal Lattices . . . . .	12
0.3 Bravais Lattice . . . . .	13
0.4 The Reciprocal Lattice . . . . .	14
0.5 Use of Penetrating Radiation to Determine Crystal Structure . . .	18
Problems . . . . .	20
<b>Classical Dynamics of a Crystal Lattice</b>	<b>21</b>
<b>1 Vibrations of Monatomic Lattices</b>	<b>21</b>
1.1 Equations of Small Vibrations . . . . .	21
1.2 The Dispersion Law of Stationary Vibrations . . . . .	25
1.3 Normal Modes of Vibrations . . . . .	29
1.4 Analysis of the Dispersion Law . . . . .	30
1.5 Spectrum of Quasi-Wave Vector Values . . . . .	33
1.6 Normal Coordinates of Crystal Vibrations . . . . .	35
1.7 The Crystal as a Violation of Space Symmetry . . . . .	37
1.8 Long-Wave Approximation and Macroscopic Equations for the Displacements Field . . . . .	38
1.9 The Theory of Elasticity . . . . .	41
Problem . . . . .	44
<b>2 Models of Crystals of Various Dimensions</b>	<b>46</b>
2.1 Mechanics of a One-Dimensional Crystal . . . . .	46
2.2 Vibrations of a Linear Chain . . . . .	50
2.3 Two-Dimensional Dipole Lattice . . . . .	57
2.4 Vibrations of a Strongly Anisotropic Crystal (Scalar Model) . . .	60
2.5 "Bending" Waves in a Strongly Anisotropic Crystal . . . . .	62
Problems . . . . .	68

<b>3</b>	<b>Vibrations of Polyatomic Lattices</b>	<b>70</b>
3.1	Optical Vibrations . . . . .	70
3.2	General Analysis of Vibrations of Polyatomic Lattice . . . . .	75
3.3	Molecular Crystals . . . . .	79
3.4	Optical Vibrations of 1D Crystal . . . . .	83
3.5	Optical Vibrations of a 2D Lattice of Bubbles . . . . .	85
3.6	Long-Wave Librational Vibrations of a 2D Dipole Lattice . . . . .	89
3.7	Longitudinal Vibrations of a 2D Electron Crystal . . . . .	93
3.8	Long-Wave Vibrations of an Ionic Crystal . . . . .	98
	Problems . . . . .	105
<b>4</b>	<b>Frequency Spectrum and Its Relation to the Green Function</b>	<b>106</b>
4.1	Constant Frequency Surface . . . . .	106
4.2	Frequency Spectrum of Vibrations . . . . .	111
4.3	Analysis of Vibrational Frequency Distribution . . . . .	113
4.4	Dependence of Frequency Distribution on Crystal Dimensionality	118
4.5	Green Function for the Vibration Equation . . . . .	123
4.6	Retarding and Advancing Green Functions . . . . .	127
4.7	Relation Between Density of States and Green Function . . . . .	129
4.8	The Spectrum of Eigenfrequencies and the Green Function of a Deformed Crystal . . . . .	132
	Problems . . . . .	134
<b>5</b>	<b>Nonlinear Dynamics of One-Dimensional Crystals</b>	<b>135</b>
5.1	Solitary Nonlinear Wave in an Anharmonic Crystal . . . . .	135
5.2	Frenkel-Kontorova Model and sine-Gordon Equation . . . . .	139
5.3	Soliton as a Particle in 1D Crystals . . . . .	143
5.4	Harmonic Vibrations in a 1D Crystal Containing a Crowdion (kink)	147
5.5	Solitons of Bending Vibrations in a Linear Chain . . . . .	149
	<b>Quantum Mechanics of Crystals</b>	<b>154</b>
<b>6</b>	<b>Quantization of Crystal Vibrations</b>	<b>154</b>
6.1	Occupation Number Representation . . . . .	154
6.2	Phonons . . . . .	159
6.3	Quantum Mechanical Definition of the Green Function . . . . .	161
6.4	Displacement Correlator and the Mean Square of Atomic Displace- ment . . . . .	163
6.5	Atomic Localization near a Crystal Lattice Site . . . . .	166
6.6	Quantization of Elastic Deformation Field . . . . .	168

<b>7</b>	<b>Interaction of Excitations in a Crystal</b>	<b>171</b>
7.1	Anharmonicity of Crystal Vibrations and Phonon Interaction . . .	171
7.2	The Effective Hamiltonian for Phonon Interaction and Decay Processes . . . . .	175
7.3	Inelastic Diffraction by a Crystal and the Vibration Dispersion Law	179
7.4	Effect of Thermal Atomic Motion on Elastic $\gamma$ Quantum Scattering	184
7.5	Equation of Phonon Motion in a Deformed Crystal . . . . .	187
<b>8</b>	<b>Quantum Crystals</b>	<b>191</b>
8.1	Stability Condition of a Crystal State . . . . .	191
8.2	The Ground State of a Quantum Crystal . . . . .	194
8.3	Equations for Small Vibrations of a Quantum Crystal . . . . .	195
	<b>Crystal Lattice Defects</b>	<b>200</b>
<b>9</b>	<b>Point Defects</b>	<b>200</b>
9.1	Point Defect Models in the Crystal Lattice . . . . .	200
9.2	Defects in Quantum Crystals . . . . .	204
9.3	Mechanisms of Classical Diffusion and Quantum Diffusion of Defects . . . . .	207
9.4	Quantum Crowdion Motion . . . . .	211
9.5	Point Defects in Elasticity Theory . . . . .	213
	Problem . . . . .	217
<b>10</b>	<b>Linear Crystal Defects</b>	<b>218</b>
10.1	Dislocations . . . . .	218
10.2	Dislocations in Elasticity Theory . . . . .	220
10.3	Glide and Climb of a Dislocation . . . . .	223
10.4	Disclinations . . . . .	226
10.5	Disclinations and Dislocations . . . . .	229
	Problem . . . . .	230
<b>11</b>	<b>Localization of Vibrations</b>	<b>232</b>
11.1	Localization of Vibrations near an Isolated Isotope Defect . . . .	232
11.2	Elastic Wave Scattering by Point Defects . . . . .	237
11.3	Green Function for a Crystal with Point Defects . . . . .	245
11.4	Influence of Defects on the Density of Vibrational States in a Crystal	250
11.5	Quasi-Local Vibrations . . . . .	253
11.6	Collective Excitations in a Crystal with Heavy Impurities . . . .	256
11.7	Possible Rearrangement of the Spectrum of Long-Wave Crystal Vibrations . . . . .	259
	Problems . . . . .	262

<b>12</b>	<b>Localization of Vibrations near Extended Defects</b>	<b>264</b>
12.1	Crystal Vibrations with 1D Local Inhomogeneity . . . . .	264
12.2	Quasi-Local Vibrations Near a Dislocation . . . . .	268
12.3	Localization of Small Vibrations in the Elastic Field of a Screw Dislocation . . . . .	271
12.4	Frequency of Local Vibrations in the Presence of a Two-Dimensi- onal (Planar) Defect . . . . .	274
12.5	Surface Vibrations and the Problem of Boundary Conditions in Elasticity Theory . . . . .	279
<b>13</b>	<b>Elastic Field of Dislocations in a Crystal</b>	<b>285</b>
13.1	Equilibrium Equation for an Elastic Medium Containing Disloca- tions . . . . .	285
13.2	Stress Field Action on Dislocation . . . . .	287
13.3	Fields and the Interaction of Straight Dislocations . . . . .	290
13.4	The Peierls Model . . . . .	297
13.5	Dislocation Field in a Sample of Finite Dimensions . . . . .	300
13.6	Long-Range Order in a Dislocated Crystal . . . . .	302
	Problems . . . . .	306
<b>14</b>	<b>Dislocation Dynamics</b>	<b>308</b>
14.1	Elastic Field of Moving Dislocations . . . . .	308
14.2	Dislocations as Plasticity Carriers . . . . .	311
14.3	Energy and Effective Mass of a Moving Dislocation . . . . .	314
14.4	Equation for Dislocation Motion . . . . .	319
	<b>Subject Index</b>	<b>324</b>
