Spectrometric Titrations

Analysis of Chemical Equilibria

Contents

Part I The Theoretical and Methodological Basis of Spectrometric Titration

1 Basic Principles and the Classification of Titration Methods . . 3

1.1 Definitions 3
1.2 The Classification of Spectrometric Titration Methods 5
Literature 7

2 Graphic Treatment of the Data from a Spectrometric Titration . 9

Literature 12

3 Basic Principles of Multiple Wavelength Spectrometry as Applied to Titration Systems 13

3.1 Generalized Lambert-Beer-Bouguer Law 13
3.2 Matrix-Rank Analysis of a Titration System 15
3.2.1 Numeric Matrix-Rank Analysis 15
3.2.2 Graphic Methods of Matrix-Rank Analysis 16
Literature 20

4 Thermodynamic and Electrochemical Principles of Spectrometric Titration Systems 23

Literature 25

Part II The Formal Treatment and Evaluation of Titration Systems – Analysis of Chemical Equilibria

5 The Goal of a Spectrometric Titration 29

6	**Single-Step Acid-Base Equilibria**	33
6.1	Basic Equations	33
6.2	Graphic Matrix-Rank Analysis	34
6.3	Determination of Absolute pK Values	39
6.3.1	Inflection Point Analysis	39
6.3.2	Determining the Midpoint of Overall Change in Absorbance (the "Halving Method")	42
6.3.3	Linearization of Spectrometric Titration Curves	42
6.3.4	Numeric Evaluation of pK Through the Use of Linear Equations	44
6.3.5	Non-linear Curve-Fitting Methods	46
6.3.6	Photometric Determination of pK in the Absence of pH Measurements	47
6.4	The Treatment of Non-overlapping, Multi-Step Titration Systems as Combinations of Single-Step Subsystems	48
6.5	Summary	60
6.5.1	Single-Step ($s = 1$) Titrations	60
6.5.2	Non-overlapping, Multi-Step Titration Systems	64
	Literature	66
7	**Two-Step Acid-Base Equilibria**	67
7.1	Basic Equations	67
7.2	Graphic Matrix-Rank Analysis (ADQ-Diagrams)	69
7.3	The Determination of Absolute pK Values	75
7.3.1	Inflection Point Analysis (First Approximate Method)	75
7.3.2	Uniform Subregions in an Absorbance Diagram (Second Approximate Method)	80
7.3.3	Dissociation Diagrams	84
7.3.4	Bisection of the Sides of an Absorbance Triangle	88
7.3.5	Pencils of Rays in an Absorbance Triangle	90
7.3.6	Linear and Non-linear Regression Methods	92
7.4	Determining the Quotient K_1/K_2 ($\Delta pK = pK_2 - pK_1$)	95
7.4.1	Distance Relationships Within an Absorbance Triangle	96
7.4.2	Non-linear Regression Analysis	98
7.5	The Characteristic Concentration Diagram	105
7.5.1	Second-Order Curves (Conic Sections)	106
7.5.2	Poles and Polars of Conic Sections	108
7.5.3	Pencils of Rays, and Lines Bisecting the Sides of the Triangle	109
7.5.4	Distance Relationships	112
7.6	Geometric Relationships Between Concentration Diagrams and Absorbance Diagrams	115
7.7	Concentration Difference Quotient (CDQ) Diagrams	117
7.8	Geometric Relationships Between ADQ-, CDQ-, and A-Diagrams	121

7.9	Summary and Tabular Overview	126
	Literature	129
8	**Three-Step Acid-Base Equilibria**	133
8.1	Basic Equations	133
8.2	Graphic Matrix-Rank Analysis (ADQ3-Diagrams)	135
8.3	Absolute pK Determination	136
8.3.1	Analysis of Inflection Points	136
8.3.2	Uniform Subregions Within Absorbance Diagrams	136
8.3.3	Dissociation Diagrams	141
8.3.4	Pencils of Rays in an Absorbance Tetrahedron	144
8.3.5	Pencils of Planes in the Absorbance Tetrahedron	145
8.3.6	Correlation of Two-dimensional A- and ADQ-Diagrams	148
8.3.6.1	Determining the Molar Absorptivities of BH_2^- and BH^{2-}	148
8.3.6.2	Reducing the System by One Stage of Equilibrium	152
8.3.6.3	Determining pK Values from the Three Separate Equilibria	153
8.3.7	Linear and Non-linear Regression Analysis	155
8.4	The Determination of K_1/K_2 and K_2/K_3 with the Aid of the Absorbance Tetrahedron	160
8.5	The Characteristic Concentration Diagram	162
8.5.1	Tangents and Osculating Planes	162
8.5.2	Pencils of Rays	166
8.5.3	Pencils of Planes	168
8.5.4	Determining K_1/K_2 and K_2/K_3 from the Concentration Tetrahedron	171
8.6	Geometrical Relationships Between A- and ADQ-Diagrams	173
8.7	Summary and Tabular Overview	180
	Literature	180
9	***s*-Step Overlapping Acid-Base Equilibria**	183
9.1	Basic Equations	183
9.2	Characteristic Concentration Diagrams and Absorbance Diagrams	185
9.3	The Generalized Form of an ADQ-Diagram	189
9.4	The Establishment of Absorbance Polyhedra	191
9.5	The Determination of Absolute pK-Values	194
9.6	Summary	197
	Literature	198
10	**Non-Linear Curve-Fitting of Spectrometric Data from *s*-Step Acid-Base Equilibrium Systems**	201
10.1	Basic Equations	201
10.2	Iterative Curve-Fitting Procedures	202

10.3 Statistical Analysis 207
10.4 Summary 208
Literature 210

11 Simultaneous Titrations 211

11.1 Basic Equations 211
11.2 Graphic Matrix-Rank Analysis 214
11.3 The Determination of Relative p*K* Values 214
11.3.1 Creation of a Dissociation-Degree Diagram 215
11.3.2 Points of Bisection in a Dissociation-Degree Diagram 219
11.3.3 Terminal Slope in a Dissociation-Degree Diagram 219
11.3.4 Complete Evaluation of a Dissociation-Degree Diagram 220
11.3.5 The Diagonal of a Dissociation-Degree Diagram 220
11.3.6 A Comparison of the Various Methods 221
Literature 222

12 Branched Acid-Base Equilibrium Systems 223

12.1 Macroscopic and Microscopic p*K* Values: The Problem of Assignment 223
12.2 p*K* Assignments Based on Extrapolations from Unbranched Systems . 226
12.3 Assignment of Spectral Features to Specific Dissociable Groups . . 227
12.3.1 UV–VIS Spectroscopy 227
12.3.2 IR and Raman Spectroscopy 229
12.3.3 NMR Spectroscopy 230
12.3.4 The Dependence of Spectra on Solvent and Temperature; Band Shape Analysis 232
12.4 Summary 237
Literature 238

13 Metal-Complex Equilibria 241

13.1 The System $BH \rightleftarrows B\ (H)$, $M + B \rightleftarrows MB$ 241
13.1.1 Concentration Diagrams 241
13.1.2 Absorbance Diagrams 245
13.2 Determination of Overall Stability Constants for Metal Complexes Related to Multi-Step Acid-Base Equilibria 252
13.3 The Method of Continuous Variation ("Job's Method") 256
13.4 The System $M + B \rightleftarrows MB$, $MB + B \rightleftarrows MB$ 259
13.4.1 Concentration Diagrams 259
13.4.2 Excess-Absorbance Diagrams 261
13.4.3 The System Daphnetin/$FeCl_3$ 265
13.5 Ion-Selective Electrodes in the Determination of Stability Constants . 270

13.6 Summary 272
Literature 273

14 Association Equilibria 277

14.1 Establishing Association Constants for Dimerism Equilibria Related to Protolysis Systems 277
14.2 Determining Association Constants for the System $2B \leftrightarrows C$ by Successively Increasing the Dye Concentration 280
14.2.1 Absorbance Diagrams 280
14.2.2 A Practical Example Based on the Eosine System 284
14.2.3 Excess Absorbance and Reduced Absorbance Diagrams 287
14.3 Reduced Absorbance Difference Quotient Diagrams and Excess Absorbance Quotient Diagrams ($2B \leftrightarrows C$, $C + B \leftrightarrows E$) 290
14.4 Determining Association Constants of Charge-Transfer Complexes . 292
14.5 Summary 296
Literature 297

15 Redox Equilibria 299

15.1 Determining Standard Electrode Potentials 299
15.2 The Redox System $Red_1 + Ox_2 \leftrightarrows Ox_1 + Red_2$ 303
15.2.1 Evaluating the Equilibrium Constant by Successively Increasing the Concentration of One Component (First Method) 303
15.2.2 Determining the Equilibrium Constant by the Method of Continuous Variation (Second Method) 306
15.2.3 Determining the Equilibrium Constant for an NADH-Dependent Dehydrogenase Reaction 310
15.3 Summary 313
Literature 313

Part III Instrumental Methods

16 Suitable Apparatus for Spectrometric Titration 317

16.1 *m* Experiments, Each Performed in a Different Buffer Medium . . . 317
16.2 Discontinuous Spectrometric Titration in the Strictest Sense 319
16.2.1 Titration Outside the Spectrometer 319
16.2.2 Titration Inside the Spectrometer 324
16.3 Optimal Sample Size for Spectrometric Titration 325
16.4 Introducing the Titrant: Burets and Other Alternatives 326
Literature 327

17 Electrochemical Methods 329

17.1 Problems Associated with the Conventional pH Scale 329
17.2 Calibrating a pH Meter Using Standard Buffers 331
17.3 pH Measurements 334
Literature 336

18 Spectrometric Methods 337

18.1 UV–VIS Absorption 337
18.1.1 Spectrometric Data Collection 337
18.1.2 The Lambert-Beer-Bouguer Law and its Associated Error Function 340
18.2 Fluorescence 344
18.2.1 Spectrometric Data Collection 344
18.2.2 Quantitative Fluorescence Spectrometry and Predictable Sources of Error 346
18.2.3 Protolysis Equilibria: The Electronic Ground State vs. Excited States . 350
18.3 Circular Dichroism (CD) and Optical Rotatory Dispersion (ORD) . . 356
18.3.1 Spectrometric Data Collection 356
18.3.2 Quantitative CD and ORD Spectrometry 359
18.4 IR Absorption 365
18.4.1 Spectrometric Data Collection 365
18.4.2 Quantitative Spectrometry in Aqueous Solution 366
18.5 Raman Scattering 368
18.5.1 Spectrometric Data Collection 368
18.5.2 Quantitative Spectrometry in Aqueous Solution 370
18.6 Nuclear Magnetic Resonance (NMR) 372
18.6.1 Basic Principles and Spectrometric Data Collection 372
18.6.2 Quantitative NMR Analysis of Titration Equilibria 379
Literature 386

19 Automation and Data Processing 391

Literature 394
