CONTENTS

	LIST PRI FRO	F OF TABLES EFACE xi DM THE PREFACE TO THE FIRST EDITION x	xi iii cv			
1	OVERVIEW					
	1.0	Introduction	1			
	1.1	Signals	1			
	1.2	Systems	3			
	1.3	The Frequency Domain	4			
	1.4	From Concept to Application	7			
2	ANA	ALOG SIGNALS	8			
	2.0	Scope and Objectives	8			
	2.1	Signals	8			
	2.2	Operations on Signals	12			
	2.3	Signal Symmetry	14			
	2.4	Harmonic Signals and Sinusoids	16			
	2.5	Commonly Encountered Signals	18			
	2.6	The Impulse Function	21			
	2.7	The Doublet	26			
	2.8	Moments	28			
		Problems	30			
3	DIS	CRETE SIGNALS	39			
	3.0	Scope and Objectives	39			
	3.1	Discrete Signals	39			
	3.2	Operations on Discrete Signals	41			
	3.3	Decimation and Interpolation	44			
	3.4	Common Discrete Signals	47			
	3.5	Discrete-Time Harmonics and Sinusoids	49			
	3.6	Aliasing and the Sampling Theorem	52			
	3.7	Random Signals	55			
		Problems	59			

4	ANA	ALOG SYSTEMS	68
	4.0	Scope and Objectives	68
	4.1	Introduction	68
	4.2	System Classification	70
	4.3	Analysis of LTI Systems	76
	4.4	LTI Systems Described by Differential Equations	76
	4.5	The Impulse Response of LTI Systems	81
	4.6	System Stability	85
	4.7	Application-Oriented Examples	86
		Problems	89
5	DISC	CRETE-TIME SYSTEMS	96
-	5.0	Scope and Objectives	96
	5.1	Discrete-Time Operators	96
	5.2	System Classification	97
	5.3	Digital Filters	101
	54	Digital Filters Described by Difference Equations	103
	5.5	Impulse Response of Digital Filters	111
	5.6	Stability of Discrete-Time LTI Systems	115
	5.7	Connections: System Representation in Various Forms	116
	5.8	Application-Oriented Examples	117
	0.0	Problems	121
6	CON	VTINUOUS CONVOLUTION	130
	6.0	Scope and Objectives	130
	6.1	Introduction	130
	6.2	Convolution of Some Common Signals	133
	6.3	Some Properties of Convolution	135
	6.4	Convolution by Ranges (Graphical Convolution)	138
	6.5	Stability and Causality	144
	6.6	The Response to Periodic Inputs	146
	6.7	Periodic Convolution	150
	6.8	Connections: Convolution and Transform Methods	151
	6.9	Convolution Properties Based on Moments	153
	6.10	Correlation	156
		Problems	160
7	DISCRETE CONVOLUTION 169		
	7.0	Scope and Objectives	169
	7.1	Discrete Convolution	169
	7.2	Convolution Properties	171
	7.3	Convolution of Finite Sequences	172
	7.4	Stability and Causality of LTI Systems	177
	7.5	System Response to Periodic Inputs	178

	7.6	Periodic Convolution
	7.7	Connections: Discrete Convolution and Transform Methods
	7.8	Deconvolution
	7.9	Discrete Correlation
		Problems
8	FOU	RIER SERIES 197
0	80	Scope and Objectives 197
	81	Fourier Series: A First Look 197
	82	Simplifications Through Signal Symmetry 201
	8.3	Parseval's Relation and the Power in Periodic Signals 205
	8.4	The Spectrum of Periodic Signals
	8.5	Properties of Fourier Series
	8.6	Signal Reconstruction and the Gibbs Effect
	87	System Besponse to Periodic Inputs
	8.8	Application-Oriented Examples
	8.9	The Dirichlet Kernel and the Gibbs Effect
	8.10	The Fourier Series. Orthogonality, and Least Squares
	8.11	Existence. Convergence, and Uniqueness
	8.12	A Historical Perspective
		Problems
0	THE	POURIER TRANSPORM 948
9	1 ПЕ	Score and Objectives 248
	9.0	Scope and Objectives
	9.1	Equipion Transform Dairs and Droporties
	9.2	System Analysis Using the Fourier Transform
	9.5	Frequency Response of Filters
	9.4	Energy and Power Spectral Density 282
	9.0	Time Bandwidth Massures
	9.0	Problems 280
		1 IODIEIIIS
10	MO	DULATION 300
	10.0	Scope and Objectives
	10.1	Amplitude Modulation
	10.2	Single-Sideband AM
	10.3	Angle Modulation
	10.4	Wideband Angle Modulation
	10.5	Demodulation of FM Signals
	10.6	The Hilbert Transform
		Problems
11	тнь	LAPLACE TRANSFORM 330
	11.0	Scope and Objectives
	11.1	The Laplace Transform

11.2	Properties of the Laplace Transform	332
11.3	Poles and Zeros of the Transfer Function	339
11.4	The Inverse Laplace Transform	34 0
11.5	The s-Plane and BIBO Stability	344
11.6	The Laplace Transform and System Analysis	347
11.7	Connections	358
·	Problems	36 0
12 APF	PLICATIONS OF THE LAPLACE TRANSFORM	367
12.0	Scope and Objectives	367
12.1	Frequency Response	367
12.2	Minimum-Phase Filters	369
12.3	Bode Plots	370
12.4	Performance Measures	378
12.5	Feedback	382
12.6	Application of Feedback: The Phase-Locked Loop	387
	Problems	390
13 AN/	ALOG FILTERS	398
13.0	Scope and Objectives	398
13.1	Introduction	398
13.2	The Design Process	402
13.3	The Butterworth Filter	403
13.4	The Chebyshev Approximation	412
13.5	The Inverse Chebyshev Approximation	421
13.6	The Elliptic Approximation	427
13.7	The Bessel Approximation	432
	Problems	440
14 SAN	IPLING AND QUANTIZATION	446
14.0	Scope and Objectives	446
14.1	Ideal Sampling	446
14.2	Sampling, Interpolation, and Signal Recovery	456
14.3	Quantization	460
14.4	Digital Processing of Analog Signals	465
14.5	Compact Disc Digital Audio	470
14.6	Dynamic Range Processors	472
	Problems	475
15 THE	E DISCRETE-TIME FOURIER TRANSFORM	482
15.0	Scope and Objectives	482
15.1	The Discrete-Time Fourier Transform	482
15.2	Connections: The DTFT and the Fourier Transform	483
15.3	Properties of the DTFT	487

.

	The Transfer Function
15.5	System Analysis Using the DTFT
15.6	Connections
15.7	Ideal Filters
15.8	Some Traditional and Non-traditional Filters
15.9	Frequency Response of Discrete Algorithms
15.10	Oversampling and Sampling Rate Conversion
	Problems
16 TH	E DFT AND FFT 535
16.0	Scope and Objectives
16.1	Introduction
16.2	Properties of the DFT
16.3	Connections
16.4	Approximating the DTFT by the DFT
16.5	The DFT of Periodic Signals
16.6	The DFT of Nonperiodic Signals
16.7	Spectral Smoothing by Time Windows
16.8	Applications in Signal Processing
16.9	Spectrum Estimation
16.10) Matrix Formulation of the DFT and IDFT
16.1	The FFT
16 19	Why Equal Longths for the DET and IDET? 577
10.14	why Equal Delignes for the DTT and IDTT:
10.12	Problems
10.12	Problems
17 TH	Problems 581 E z-TRANSFORM 592
10.12 17 THI 17.0	Problems 581 E z-TRANSFORM 592 Scope and Objectives 592
10.12 17 THI 17.0 17.1	Problems 577 Problems 581 E z-TRANSFORM 592 Scope and Objectives 592 The Two-Sided z-Transform 592
17 THI 17.0 17.1 17.2	Problems 577 Problems 581 E z-TRANSFORM 592 Scope and Objectives 592 The Two-Sided z-Transform 592 Properties of the z-Transform 596
17 THI 17.0 17.1 17.2 17.3	Problems 581 E z-TRANSFORM 592 Scope and Objectives 592 The Two-Sided z-Transform 592 Properties of the z-Transform 596 Poles, Zeros, and the z-Plane 600
17 THI 17.0 17.1 17.2 17.3 17.4	Problems 577 Problems 581 E z-TRANSFORM 592 Scope and Objectives 592 The Two-Sided z-Transform 592 Properties of the z-Transform 596 Poles, Zeros, and the z-Plane 600 The Transfer Function 602

18.5	Application-Oriented Examples	649
18.6	Allpass Filters	658
18.7	Application-Oriented Examples: Digital Audio Effects	660
	Problems	664
19 IIR	DIGITAL FILTERS	673
19.0	Scope and Objectives	673
19.1	Introduction	673
19.2	IIR Filter Design	674
19.3	Response Matching	676
19.4	The Matched z-Transform for Factored Forms	684
19.5	Mappings from Discrete Algorithms	685
19.6	The Bilinear Transformation	691
19.7	Spectral Transformations for IIR Filters	694
19.8	Design Recipe for IIR Filters	703
	Problems	707
20 FIR	DIGITAL FILTERS	715
20.0	Scope and Objectives	715
20.1	Symmetric Sequences and Linear Phase	715
20.2	Window-Based Design	720
20.3	Half-Band FIR Filters	733
20.4	FIR Filter Design by Frequency Sampling	736
20.5	Design of Optimal Linear-Phase FIR Filters	740
20.6	Application: Multistage Interpolation and Decimation	744
20.7	Maximally Flat FIR Filters	748
20.8	FIR Differentiators and Hilbert Transformers	749
20.9	Least Squares and Adaptive Signal Processing	751
	Problems	754
21 MA	TLAB EXAMPLES	762
21.0	Introduction	762
21.1	The ADSP Toolbox and Its Installation	762
21.2	MATLAB Tips and Pointers	763
21.3	Graphical User Interface Programs	765
21.4	The ADSP Toolbox	766
21.5	Examples of MATLAB Code	769
REI	FERENCES	798
