# **Stability and Stabilization of Infinite Dimensional Systems with Applications**

Springer

# Contents

<b>Notation and Symbols</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Overview and examples of infinite dimensional systems . . . . .	1
1.2 Organization and brief summary . . . . .	7
1.3 Remarks on notation . . . . .	14
1.4 Notes and references . . . . .	14
<b>2 Semigroups of Linear Operators</b>	<b>15</b>
2.1 Motivation and definitions . . . . .	15
2.2 Properties of semigroups . . . . .	19
2.3 Generation theorems for semigroups . . . . .	26
2.4 Relation with the Laplace transform . . . . .	42
2.5 Differentiability and analytic semigroups . . . . .	47
2.6 Compact semigroups . . . . .	56
2.7 Abstract Cauchy problem . . . . .	61
2.7.1 Homogeneous initial value problems . . . . .	61
2.7.2 Inhomogeneous initial value problems . . . . .	66
2.7.3 Lipschitz perturbations . . . . .	68
2.8 Integrated semigroups . . . . .	71
2.9 Nonlinear semigroups of contractions . . . . .	92
2.10 Notes and references . . . . .	107
<b>3 Stability of <math>C_0</math>-Semigroups</b>	<b>109</b>
3.1 Spectral mapping theorems . . . . .	112
3.2 Spectrum-determined growth condition . . . . .	114
3.3 Weak stability and asymptotic stability . . . . .	122
3.4 Exponential stability — time domain criteria . . . . .	133
3.5 Exponential stability — frequency domain criteria . . . . .	135
3.6 Essential spectrum and compact perturbations . . . . .	145
3.7 Invariance principle for nonlinear semigroups . . . . .	157
3.8 Notes and references . . . . .	164

<b>4 Static Sensor Feedback Stabilization of Euler-Bernoulli Beam Equations</b>	<b>165</b>
4.1 Modeling of a rotating beam with a rigid tip body . . . . .	167
4.2 Stabilization using strain or shear force feedback . . . . .	179
4.3 Damped second order systems . . . . .	186
4.4 Exponential stability and spectral analysis . . . . .	198
4.4.1 Exponential stability . . . . .	199
4.4.2 Spectral analysis . . . . .	206
4.5 Shear force feedback control of a rotating beam . . . . .	216
4.5.1 Well-posedness and exponential stability . . . . .	217
4.5.2 Asymptotic behavior of the spectrum . . . . .	231
4.6 Stability analysis of a hybrid system . . . . .	235
4.6.1 Well-posedness and exponential stability . . . . .	235
4.6.2 Spectral analysis . . . . .	241
4.7 Gain adaptive strain feedback control of Euler-Bernoulli beams	247
4.8 Notes and references . . . . .	256
<b>5 Dynamic Boundary Control of Vibration Systems Based on Passivity</b>	<b>259</b>
5.1 A general framework for system passivity . . . . .	260
5.1.1 Uncontrolled case . . . . .	262
5.1.2 Controlled case . . . . .	262
5.2 Dynamic boundary control using positive real controllers . .	276
5.2.1 Positive real controllers and their characterizations .	277
5.2.2 Stability analysis of control systems with SPR controllers	279
5.3 Dynamic boundary control of a rotating flexible beam . . . .	290
5.3.1 Stabilization problem using SPR controllers . . . . .	292
5.3.2 Orientation problem using positive real controllers .	297
5.4 Stability robustness against small time delays . . . . .	301
5.5 Notes and references . . . . .	307
<b>6 Other Applications</b>	<b>309</b>
6.1 A General linear hyperbolic system . . . . .	310
6.2 Stabilization of serially connected vibrating strings . . . .	333
6.3 Two coupled vibrating strings . . . . .	341
6.4 A vibration cable with a tip mass . . . . .	347
6.5 Thermoelastic system with Dirichlet - Dirichlet boundary conditions . . . . .	355
6.6 Thermoelastic system with Dirichlet - Neumann boundary conditions . . . . .	374
6.7 Renardy's counter-example on spectrum-determined growth condition . . . . .	380
6.8 Notes and references . . . . .	386
