## Part I: THERMOSTATICS

1

<b>1</b>	<b>BASIC PRINCIPLES OF THERMOSTATICS</b>	<b>5</b>
1.1	Introduction . . . . .	5
1.2	Extensive and Intensive Variables . . . . .	5
1.3	Entropy and Temperature . . . . .	8
1.4	Concept of Equilibrium . . . . .	9
1.5	Internal Energy and the First Law . . . . .	10
1.6	"Processes" in Thermostatrics; Cycles . . . . .	11
1.7	Constraints and Walls . . . . .	11
1.8	Fundamental Relation, Equations of State . . . . .	12
1.9	Euler and Gibbs-Duhem Relations . . . . .	18
1.10	Second Law of Thermostatrics . . . . .	20
1.11	Third Law of Thermostatrics . . . . .	22
1.12	Conditions for Fundamental Relations . . . . .	24
1.13	Extremum Principles for Equilibrium . . . . .	24
	1.13.1 Entropy-maximum/Energy-minimum Principles . . . . .	24
	1.13.2 Concept of a Reservoir . . . . .	26
	1.13.3 Why $T$ is Called Temperature . . . . .	27
	1.13.4 Thermostatic Potentials and Equilibrium . . . . .	28
1.14	Response Functions . . . . .	33
1.15	Thermostatic Relations . . . . .	35
1.16	Second Law: Alternative Statements . . . . .	38
1.17	Some Applications of Thermostatrics . . . . .	40
1.18	Chapter Summary . . . . .	45
1.19	Historical Notes . . . . .	46
	1.19.1 First Law of Thermostatrics . . . . .	46
	1.19.2 Second Law of Thermostatrics . . . . .	50
	1.19.3 Third Law of Thermostatrics . . . . .	53
	1.19.4 Gibbs and Modern Thermostatrics . . . . .	53
	1.19.5 Duhem and Applications of Thermostatrics . . . . .	54
1.20	Problems . . . . .	56
1.21	Supplementary Notes . . . . .	57
	S.1.1 Convexity and Concavity of Thermostatic Variables . . . . .	57
	S.1.2 Mathematical Foundation of Thermostatrics . . . . .	57
	S.1.3 Applications of Thermostatrics . . . . .	58

<b>2</b>	<b>THERMOSTATICS OF PHASE TRANSITIONS</b>	<b>59</b>
2.1	Introduction . . . . .	59
2.2	Phases and Components . . . . .	59
2.3	Phase Diagrams and Critical Point . . . . .	61
2.3.1	Fluids . . . . .	61
2.3.2	Magnets . . . . .	64
2.4	Stability of Phases . . . . .	66
2.4.1	Intrinsic Stability of Homogeneous State . . . . .	66
2.4.2	Mutual Stability of Coexisting Phases . . . . .	68
2.5	Stable, Metastable and Unstable States . . . . .	74
2.5.1	Van der Waals Gas . . . . .	77
2.5.2	Curie-Weiss Magnet . . . . .	80
2.6	Derivatives of Thermostatic Potentials . . . . .	82
2.7	Classification of Phase Transitions . . . . .	83
2.8	Critical Exponents . . . . .	87
2.9	Scaling Relations . . . . .	90
2.10	Chapter Summary . . . . .	91
2.11	Historical Notes . . . . .	92
2.11.1	Concept of Latent Heat . . . . .	92
2.11.2	Critical Phenomena in Fluids . . . . .	92
2.11.3	Critical Phenomena in Magnets . . . . .	94
2.12	Problems . . . . .	95
2.13	Supplementary Notes . . . . .	96
S.2.1	Tricritical and Multicritical Phenomena . . . . .	96

## PART II

### BASIC PRINCIPLES OF STATISTICAL MECHANICS

and

#### Rules of Calculation

99

<b>3</b>	<b>RULES OF CALCULATION</b>	<b>109</b>
3.1	Introduction . . . . .	109
3.2	Isolated Classical Systems . . . . .	109
3.2.1	Boltzmann Hypothesis . . . . .	109
3.2.2	Illustration with Ideal Classical Ising Magnet . . . . .	111
3.2.3	Illustration with Ideal Classical Monatomic Gas . . . . .	112
3.2.4	Entropy of Mixing and Gibbs' Paradox . . . . .	113
3.2.5	Equipartition of Energy . . . . .	116

3.2.6	Concepts of Ensemble and Ergodicity . . . . .	117
3.3	Closed Classical Systems . . . . .	118
3.3.1	The Partition Function . . . . .	119
3.3.2	Connection with Thermostatistics . . . . .	121
3.3.3	Illustration with Ideal Classical Ising Magnet . . . . .	125
3.3.4	Illustration with Ideal Classical Monatomic Gas . . . . .	125
3.3.5	Equipartition of Energy . . . . .	127
3.4	Open Classical Systems . . . . .	128
3.4.1	Grand Partition Function . . . . .	128
3.4.2	Connection with Thermostatistics . . . . .	129
3.4.3	Illustration with Ideal Classical Monatomic Gas . . . . .	130
3.5	Unified Presentation of the Rules . . . . .	131
3.5.1	Micro-canonical Ensemble . . . . .	132
3.5.2	Canonical Ensemble . . . . .	133
3.5.3	Grand-canonical Ensemble . . . . .	133
3.6	Maximum Entropy Principle . . . . .	133
3.6.1	Microcanonical Ensemble . . . . .	134
3.6.2	Canonical Ensemble . . . . .	134
3.6.3	Grand Canonical Ensemble . . . . .	135
3.7	Illustration with Ideal Quantum Gases . . . . .	136
3.7.1	Micro-Canonical Ensemble . . . . .	136
3.7.2	Canonical Ensemble . . . . .	144
3.7.3	Grand-Canonical Ensemble . . . . .	147
3.8	Quantum Systems; Density Operator . . . . .	147
3.8.1	Micro-Canonical Ensemble . . . . .	148
3.8.2	Canonical Ensemble . . . . .	150
3.9	Chapter Summary . . . . .	152
3.10	Historical Notes . . . . .	154
3.10.1	James Clerk Maxwell . . . . .	155
3.10.2	Ludwig Boltzmann . . . . .	156
3.10.3	Josiah Willard Gibbs . . . . .	157
3.10.4	Maximum Entropy Principle . . . . .	158
3.11	Problems . . . . .	160
3.12	Supplementary Notes . . . . .	167
S.3.1	Entropy Calculation from Trajectory . . . . .	167
S.3.2	Entropy and Information . . . . .	167
S.3.3	Wigner Function . . . . .	169

<b>4</b>	<b>FLUCTUATIONS, CORRELATIONS AND RESPONSE</b>	<b>171</b>
4.1	Introduction . . . . .	171
4.2	Energy: Most Probable and Mean . . . . .	172
4.3	Particle Number: Most Probable and Mean . . . . .	172
4.4	Fluctuations . . . . .	173
4.4.1	Fluctuations in Energy . . . . .	174
4.4.2	Fluctuations in Volume . . . . .	175
4.4.3	Fluctuations in Particle Number . . . . .	176
4.4.4	Cross Correlation Between Fluctuations . . . . .	176
4.4.5	Fluctuations in Entropy . . . . .	178
4.5	Microstate Population Fluctuations . . . . .	179
4.5.1	Ideal Bose Gas . . . . .	179
4.5.2	Ideal Fermi Gas . . . . .	179
4.5.3	Ideal Boltzmann Gas . . . . .	180
4.6	Classical versus Quantum Fluctuations . . . . .	180
4.7	Correlation Functions . . . . .	181
4.8	Fluctuation-Response Theorem . . . . .	182
4.8.1	Illustration with Ising Magnets . . . . .	182
4.8.2	Illustration with Simple Fluids . . . . .	184
4.9	Scattering Measures Correlation . . . . .	184
4.10	Foundations of Laws of Thermostatistics . . . . .	187
4.11	Chapter Summary . . . . .	188
4.12	Historical Notes . . . . .	189
4.13	Problems . . . . .	190
4.14	Supplementary Notes . . . . .	192
S.4.1	Radial Distribution Functions for Fluids . . . . .	192
<b>5</b>	<b>STATISTICAL PHYSICS OF IDEAL CLASSICAL GASES</b>	<b>196</b>
5.1	Introduction . . . . .	196
5.2	Monatomic Gas; MB Distribution . . . . .	196
5.3	Full Partition Function . . . . .	198
5.3.1	Monatomic Molecules . . . . .	200
5.3.2	Diatomic Molecules . . . . .	201
5.4	Chapter Summary . . . . .	208
5.5	Historical Notes . . . . .	208
5.6	Problems . . . . .	210
5.7	Supplementary Notes . . . . .	213
S.5.1	Kinetic Theory of Gases . . . . .	213

**6 STATISTICAL PHYSICS OF IDEAL QUANTUM GASES 216**

6.1	Introduction . . . . .	216
6.2	Some General Results . . . . .	216
6.2.1	Concept of Density of Levels . . . . .	217
6.3	Ideal Fermi Gas at $T = 0$ . . . . .	219
6.3.1	Fermi Energy . . . . .	220
6.3.2	Internal Energy . . . . .	221
6.3.3	Pressure . . . . .	221
6.4	Ideal Fermi Gas at $T \neq 0$ . . . . .	222
6.4.1	Sommerfeld Expansion . . . . .	222
6.4.2	Chemical Potential . . . . .	225
6.4.3	Specific Heat . . . . .	225
6.4.4	Magnetic Susceptibility . . . . .	227
6.5	Fermi-Dirac and Bose-Einstein Integrals . . . . .	230
6.6	Ideal Bose Gas: Bose-Einstein Condensation . . . . .	231
6.6.1	Number density and Chemical Potential . . . . .	231
6.6.2	Internal energy and Specific Heat . . . . .	236
6.6.3	Entropy . . . . .	239
6.6.4	Isotherms on the PV diagram . . . . .	240
6.7	Chapter Summary . . . . .	243
6.8	Historical Notes . . . . .	244
6.8.1	FD Statistics . . . . .	244
6.8.2	BE Statistics and Discovery of BE Condensation . . . . .	245
6.9	Problems . . . . .	247
6.10	Supplementary Notes . . . . .	249
S.6.1	Quantum Gases in Astrophysics . . . . .	249
S.6.2	Phonon Contribution to Specific Heat of Crystals . . . . .	249

**PART III**  
**STATISTICAL MECHANICS**  
**OF**  
**INTERACTING SYSTEMS**

253

**7 INTERACTING SYSTEMS; THERMODYNAMIC LIMIT 257**

7.1	Introduction . . . . .	257
7.2	Models of Fluids . . . . .	258
7.2.1	Partition Function . . . . .	261
7.3	Lattices . . . . .	262

7.3.1	Bravais Lattices . . . . .	262
7.3.2	Bethe Lattice . . . . .	264
7.4	Spin Models on Lattices . . . . .	265
7.4.1	Classical Spin-1/2 Ising Model . . . . .	266
7.4.2	Spin-1/2 Ising Model: Physical Realizations . . . . .	270
7.4.3	Generalization: From Spin-1/2 to Spin-1 Ising Model . . . . .	276
7.4.4	Generalization: From Ising to Vector Spins . . . . .	277
7.4.5	Generalization: From Ising to Potts Variables . . . . .	279
7.4.6	Quantum Spin Models . . . . .	279
7.4.7	Classical Limit of Quantum Spin Models . . . . .	280
7.4.8	Magnetic Physical Realizations of Spin Models . . . . .	281
7.5	Restrictions on the Interactions . . . . .	281
7.6	Zeroes of the Grand Partition Function . . . . .	285
7.6.1	Yang-Lee Theorems and Their Consequences . . . . .	286
7.7	Chapter Summary . . . . .	291
7.8	Historical Notes . . . . .	292
7.8.1	Spin Models and Their Physical Realizations . . . . .	292
7.8.2	Thermodynamic Limit . . . . .	294
7.8.3	Yang-Lee Theorem . . . . .	295
7.9	Problems . . . . .	296
7.10	Supplementary notes . . . . .	299
S.7.1	Continuum Models of Fluids . . . . .	299
S.7.2	Spin Models on Discrete Lattices . . . . .	299
S.7.3	Vertex Models . . . . .	300
S.7.4	Generalization: From "Hard" Spins to "Soft" Spins . . . . .	300
S.7.5	Spin Models with Quenched Disorder . . . . .	303
S.7.6	Anisotropic Hamiltonians for Spin System . . . . .	303
S.7.7	Thermodynamic Limit . . . . .	304
S.7.8	Complex Temperature Plane: Zeroes of Partition Function . . . . .	308
S.7.9	Quantum Phase Transitions and Critical Phenomena . . . . .	308
<b>8</b>	<b>EXACT SOLUTION OF SOME INTERACTING SYSTEMS</b>	<b>310</b>
8.1	Introduction . . . . .	310
8.2	Ising Model in $d = 1$ : Partition Function . . . . .	311
8.2.1	Open Chain in the Absence of External Field . . . . .	311
8.2.2	Closed Chain: Transfer Matrix Approach . . . . .	313
8.2.3	Zeroes of the Partition Function . . . . .	317
8.3	Ising Model in $d = 1$ : Thermostatistics . . . . .	321

8.3.1	Spontaneous Magnetization . . . . .	321
8.3.2	Magnetic Susceptibility . . . . .	321
8.3.3	Magnetic Specific Heat . . . . .	322
8.4	Ising Model in $d = 1$ : Correlations . . . . .	322
8.4.1	Open Chain in Zero Field . . . . .	322
8.4.2	Closed Chain: Transfer Matrix Approach . . . . .	324
8.5	Important Concepts in Phase Transitions . . . . .	326
8.5.1	Order Parameter . . . . .	326
8.5.2	Peierls-Griffiths Argument . . . . .	327
8.5.3	Phase Transitions: A "Mathematical Mechanism" . . . . .	328
8.5.4	Lower Critical Dimension . . . . .	329
8.6	Critical Exponents . . . . .	329
8.7	Exact Solution of Fluid Models in $d = 1$ . . . . .	330
8.7.1	Tonks Gas . . . . .	330
8.7.2	Takahashi Gas . . . . .	333
8.8	Chapter Summary . . . . .	334
8.9	Historical Notes . . . . .	335
8.9.1	From Ising to Peierls . . . . .	335
8.9.2	From Kramers to Onsager . . . . .	335
8.9.3	One-dimensional Models of Fluids . . . . .	337
8.10	Problems . . . . .	338
8.11	Supplementary Notes . . . . .	340
S.8.1	Peierls-Griffiths Arguments . . . . .	340
S.8.2	Duality and Star-Triangle Transformations; Exact $T_c$ 's . . . . .	340
S.8.3	Relevance of the Range of the Interaction . . . . .	341
S.8.4	Exact Solution of the Two-dimensional Ising Model . . . . .	341
S.8.5	Exact Solution of the $n$ -vector Model . . . . .	343
S.8.6	Exact Solution of the Spherical Model in $d$ -dimension . . . . .	343
<b>9</b>	<b>COMPUTER SIMULATION METHODS</b> . . . . .	<b>347</b>
9.1	Introduction . . . . .	347
9.2	Monte Carlo Simulation . . . . .	350
9.2.1	Random Sampling Illustrated: Random Walk . . . . .	351
9.2.2	Importance Sampling Illustrated: Ising Model . . . . .	353
9.2.3	Fluctuations . . . . .	361
9.2.4	Equilibration Time and Correlation Time . . . . .	361
9.2.5	MC Simulation in Micro-canonical Ensemble . . . . .	362
9.2.6	MC Simulation of Fluids . . . . .	363
9.3	Molecular Dynamics . . . . .	364

9.3.1	Constant-Energy Molecular Dynamics . . . . .	364
9.3.2	Constant Temperature/Constant Pressure MD . . . . .	368
9.4	Non-Self-Averaging Quantities . . . . .	369
9.5	Chapter Summary . . . . .	370
9.6	Historical Notes . . . . .	370
9.6.1	MD approach . . . . .	370
9.6.2	MC approach . . . . .	371
9.7	Problems . . . . .	373
9.8	Supplementary Notes . . . . .	374
S.9.1	Random Numbers and Random-Number Generators . . . . .	374
S.9.2	Multi-Spin Coding . . . . .	374
S.9.3	MC Simulation: Tricks of the Trade . . . . .	375
S.9.4	MD Simulation: Tricks of the Trade . . . . .	376
S.9.5	Langevin Dynamics Simulation . . . . .	376
S.9.6	Vector- and Parallel Processors; Special Computers . . . . .	376
S.9.7	Q2R update rules . . . . .	377
<b>10 MEAN-FIELD THEORY I:</b>		
	<b>Van der Waals-Weiss Formulation</b>	<b>379</b>
10.1	Introduction . . . . .	379
10.2	MFA for the d-dimensional Ising Model . . . . .	379
10.2.1	A Pedestrian's Approach . . . . .	380
10.2.2	An Alternative Variational Approach . . . . .	381
10.2.3	Ordering Temperature . . . . .	383
10.2.4	Thermostatic Properties . . . . .	385
10.2.5	Correlation Function . . . . .	388
10.2.6	Critical Exponents . . . . .	391
10.3	MFA for the d-dimensional Fluid . . . . .	392
10.3.1	The Equation of State . . . . .	392
10.3.2	Critical Point . . . . .	394
10.3.3	The Law of Corresponding States . . . . .	396
10.3.4	Critical Exponents . . . . .	396
10.4	Comparison of Magnets and Fluids . . . . .	398
10.5	Validity and Accuracy of MFA . . . . .	400
10.6	Chapter Summary . . . . .	403
10.7	Historical Notes . . . . .	405
10.7.1	Weiss and MFT of Magnets . . . . .	405
10.7.2	Van der Waals and MFT of Fluids . . . . .	406
10.7.3	Inadequacies of MFT . . . . .	408

10.8	Problems . . . . .	410
10.9	Supplementary notes . . . . .	413
	S.10.1 Order-disorder Transition in Binary Alloys . . . . .	413
	S.10.2 Bethe-Peierls-Weiss (BPW) Approximation . . . . .	413
	S.10.3 Correlation Function of Fluids in the MFA . . . . .	417
	S.10.4 Mean-field Theory of Polymers . . . . .	417
<b>11</b>	<b>MEAN-FIELD THEORY II:</b>	
	<b>Exact Solution in Infinite Dimension</b>	<b>418</b>
11.1	Introduction . . . . .	418
11.2	Infinite-Range Ising Model . . . . .	418
	11.2.1 First Approach: Largest Term Method . . . . .	419
	11.2.2 Second Approach: Method of Steepest Descent . . . . .	422
11.3	Infinite-Range Classical Gas . . . . .	425
11.4	Chapter Summary . . . . .	426
11.5	Historical Notes . . . . .	427
11.6	Problems . . . . .	428
11.7	Supplementary Notes . . . . .	429
	S.11.1 Classical n-vector Models with Long-range Interactions	429
	S.11.2 Potts Model with Infinite-range Interactions . . . . .	429
	S.11.3 Ising Model on a Bethe Lattice . . . . .	430
	S.11.4 Classical Fluids in Infinite Dimension . . . . .	431
<b>12</b>	<b>MEAN-FIELD THEORY III:</b>	
	<b>Landau Formulation</b>	<b>432</b>
12.1	Introduction . . . . .	432
12.2	Second Order Phase Transitions . . . . .	433
	12.2.1 Critical Exponents in Landau Theory . . . . .	435
12.3	First Order Phase Transitions . . . . .	437
	12.3.1 Field-driven Transition . . . . .	438
	12.3.2 $T$ -driven Transition; Asymmetric Case . . . . .	439
	12.3.3 $T$ -driven Transition; Symmetric Case . . . . .	441
12.4	Landau-Ginzburg Theory . . . . .	443
12.5	Two-Point Correlation Function . . . . .	448
	12.5.1 Fourier Transform Method . . . . .	449
	12.5.2 Method of Solving Differential Equation . . . . .	451
12.6	Ginzburg Criterion . . . . .	453
12.7	Chapter Summary . . . . .	455
12.8	Historical Notes . . . . .	456
12.9	Problems . . . . .	458

12.10	Supplementary notes . . . . .	459
S.12.1	Landau theory for Tricritical Points . . . . .	459
S.12.2	Gaussian Fluctuations and Ginzburg Criterion . . . . .	464
S.12.3	"Derivation" of Landau-Ginzburg Effective Hamiltonian	466

### 13 BEYOND MEAN-FIELD APPROXIMATION:

<b>Scaling and Renormalization Group</b>		<b>470</b>
13.1	Introduction . . . . .	470
13.2	Scaling and Universality . . . . .	470
13.2.1	Scaling Hypothesis . . . . .	472
13.2.2	Scaling Theory: a General Formulation . . . . .	474
13.2.3	Concept of Universality and Universality Classes . . . . .	477
13.2.4	Heuristic Justification of Scaling . . . . .	478
13.3	Renormalization, Fixed Points and RG Flow . . . . .	479
13.4	Chapter Summary . . . . .	483
13.5	Historical Notes . . . . .	484
13.6	Problems . . . . .	485
13.7	Supplementary Notes . . . . .	486
S.13.1	Renormalization Group Treatment of Percolation . . . . .	486

<b>Mathematical Appendix</b>		<b>489</b>
A.1	Introduction . . . . .	489
A.2	Some Useful Integrals . . . . .	489
A.3	Exact Differentials . . . . .	489
A.4	Homogeneous Functions . . . . .	489
A.4.1	Homogeneous Function of a Single Variable . . . . .	489
A.4.2	Homogeneous Function of Arbitrary Number of Variables . . . . .	490
A.4.3	Generalized Homogeneous Function . . . . .	490
A.5	Convex and Concave Functions . . . . .	490
A.5.1	Definitions . . . . .	490
A.5.2	Geometrical Interpretation . . . . .	491
A.6	Legendre Transformation . . . . .	492
A.7	Volume of A d-Dimensional Sphere . . . . .	494
A.8	Saddle point or Steepest-descent method . . . . .	496
A.9	Functional derivatives . . . . .	496
A.10	Stirling Formula . . . . .	498
A.11	Perron-Frobenius Theorem . . . . .	498
A.12	Probability and Statistics . . . . .	499
A.12.1	Uniform Distribution . . . . .	500

A.12.2 Binomial Distribution . . . . .	500
A.12.3 From Binomial to Gaussian Distribution . . . . .	502
A.12.4 From Binomial to Poisson Distribution . . . . .	503
A.13 Problems . . . . .	506
