Contents

Foreword	xv
Preface	xvii
1. Spline Regression	1
<i>Randall L. Eubank</i>	
1.1 Introduction, 1	
1.2 General Form of the Estimator, 5	
1.3 The Linear Smoothing Spline, 7	
1.4 Large-Sample Efficiency, 9	
1.5 Bayesian Motivation, 11	
1.6 Extensions and Implementations, 15	
References, 16	
2. Variance Estimation and Smoothing-Parameter Selection for Spline Regression	19
<i>Angelika van der Linde</i>	
2.1 Introduction and Some Definitions, 19	
2.2 Interpretation of the Smoothing Parameter, 22	
2.3 Quantifying the Complexity of a Smoothing Spline, 24	
2.4 Estimation of σ^2 , 29	
2.5 Determination of λ , 32	
2.6 Estimation of τ^2 , 38	
2.7 Final Remarks, 38	
References, 38	

3. Kernel Regression	43
<i>Pascal Sarda and Philippe Vieu</i>	
3.1 Introduction,	43
3.2 The Nadaraya–Watson Kernel Regression Estimate,	44
3.3 Pointwise Bias Properties of the Nadaraya–Watson Estimate,	48
3.4 Pointwise Variance Properties of the Nadaraya–Watson Estimate,	51
3.5 Trade-off Between Bias and Variance: The Mean Squared Error,	53
3.6 Global Results: Mean Integrated Squared Error Properties,	56
3.7 L_∞ Convergence Properties of the Nadaraya–Watson Estimate,	58
3.8 Complementary Bibliography,	63
References,	67
4. Variance Estimation and Bandwidth Selection for Kernel Regression	71
<i>Eva Herrmann</i>	
4.1 Introduction,	71
4.2 Nonparametric Variance Estimators,	74
4.3 Bandwidth Choice for Kernel Regression Estimators,	88
References,	103
5. Spline and Kernel Regression under Shape Restrictions	109
<i>Michel Delecroix and Christine Thomas-Agnan</i>	
5.1 Introduction,	109
5.2 Description of the Main Methods,	110
5.3 A Comparative View,	119
5.4 Examples,	122
5.5 Software Hints,	128
References,	130
6. Spline and Kernel Regression for Dependent Data	135
<i>Robert Kohn, Michael G. Schimek, and Michael Smith</i>	
6.1 Introduction,	135
6.2 Approaches for a Known Autocorrelation Function,	138
6.3 Approaches for an Unknown Autocorrelation Function,	144

- 6.4 A Bayesian Approach to Smoothing Dependent Data, 148
- 6.5 Applications of Smoothing Dependent Data, 151
- References, 156
- 7. Wavelets for Regression and Other Statistical Problems 159**
Guy P. Nason and Bernard W. Silverman
- 7.1 Introduction, 159
- 7.2 Wavelet Expansions, 160
- 7.3 The Discrete Wavelet Transform in S, 163
- 7.4 Wavelet Shrinkage, 170
- 7.5 Estimators for Data With Correlated Noise, 177
- 7.6 Implementation of the Wavelet Transform, 181
- 7.7 How to Obtain and Install the Wavelet Software, 187
- References, 189
- 8. Smoothing Methods for Discrete Data 193**
Jeffrey S. Simonoff and Gerhard Tutz
- 8.1 Introduction, 193
- 8.2 Smoothing Contingency Tables, 194
- 8.3 Smoothing Approaches to Categorical Regression, 207
- 8.4 Conclusion, 224
- References, 225
- 9. Local Polynomial Fitting 229**
Jianqing Fan and Irene Gijbels
- 9.1 Introduction, 229
- 9.2 Properties of Local Polynomial Fitting, 237
- 9.3 Choice of Bandwidth, 247
- 9.4 Choice of the Degree, 257
- 9.5 Local Modeling, 259
- 9.6 Some More Applications, 268
- References, 273
- 10. Additive and Generalized Additive Models 277**
Michael G. Schimek and Berwin A. Turlach
- 10.1 Introduction, 277
- 10.2 The Additive Model, 279
- 10.3 Generalized Additive Models, 297
- 10.4 Alternating Conditional Expectations, Additivity,
 and Variance Stabilization, 315

- 10.5 Smoothing Parameter and Bandwidth Determination, 321
- 10.6 Model Diagnostics, 322
- 10.7 New Developments, 323
- References, 324
- 11. Multivariate Spline Regression 329**
Chong Gu
- 11.1 Introduction, 329
- 11.2 Smoothing Splines as Bayes Estimates, 330
- 11.3 ANOVA Decomposition on Product Domains, 332
- 11.4 Tensor Product Splines, 333
- 11.5 Computation, 336
- 11.6 Bayesian Confidence Intervals, 338
- 11.7 Software, 340
- 11.8 Cosine Diagnostics, 344
- 11.9 Partial Splines, 348
- 11.10 Thin-Plate Splines, 350
- 11.11 Non-Gaussian Regression, 352
- References, 354
- 12. Multivariate and Semiparametric Kernel Regression 357**
Wolfgang Härdle and Marlene Müller
- 12.1 Introduction, 357
- 12.2 Multidimensional Smoothing with Kernels, 357
- 12.3 Semiparametric Generalized Regression Models, 377
- 12.4 Practical Application and Software Hints, 386
- References, 389
- 13. Spatial-Process Estimates as Smoothers 393**
Douglas W. Nychka
- 13.1 Introduction, 393
- 13.2 Thin-Plate Splines, 397
- 13.3 Spatial-Process Estimates, 401
- 13.4 Ridge-Regression Estimates and Shrinkage, 407
- 13.5 A Response-Surface Example, 411
- 13.6 Predicting Ambient Ozone, 419
- 13.7 Future Directions, 421
- References, 423

14. Resampling Methods for Nonparametric Regression	425
<i>Enno Mammen</i>	
14.1 Introduction, 425	
14.2 The Idea of Bootstrap, 426	
14.3 Bootstrap in Nonparametric Regression, 430	
14.4 Bootstrap Confidence Intervals and Bands, 434	
14.5 Bootstrap-Bandwidth Choice, 437	
14.6 Bootstrap Tests in Nonparametrics, 439	
14.7 Bootstrap Inference on the Shape of a Curve, 442	
14.8 Extensions, 445	
References, 446	
15. Multidimensional Smoothing and Visualization	451
<i>David W. Scott</i>	
15.1 Introduction, 451	
15.2 Data-Point Visualization, 452	
15.3 Functional Visualization in One and Two Variables, 456	
15.4 Averaged Shifted Histograms, 458	
15.5 Functional Visualization in Three Variables and Beyond, 462	
15.6 Visualization of Regression Functions, 467	
15.7 Summary, 468	
References, 468	
16. Projection Pursuit Regression	471
<i>Sigbert Klinke and Janet Grassmann</i>	
16.1 Introduction, 471	
16.2 The Basic PPR Algorithm, 473	
16.3 Quality of Approximation, 474	
16.4 Number of Terms to Choose, 475	
16.5 Interpretable PPR, 476	
16.6 Convergence Rates, 477	
16.7 Modifications, 478	
16.8 PPR and Neural Networks, 484	
16.9 Optimization Methods for PPR and Neural Networks, 487	
16.10 The Implementation of PPR in S-PLUS, R, and Xplore, 488	

16.11 An Example, 490

16.12 Conclusion, 493

References, 493

17. Sliced Inverse Regression 497

Thomas T. Kötter

17.1 Introduction, 497

17.2 The Idea, 499

17.3 Statistical Properties, 501

17.4 The Unknown Dimensionality, 502

17.5 Slicing Strategies, 503

17.6 Implementation, 504

17.7 Modifications, 507

17.8 An Example, 508

References, 511

18. Dynamic and Semiparametric Models 513

Ludwig Fahrmeir and Leonhard Knorr-Held

18.1 Introduction, 513

18.2 Linear Dynamic Models and Optimal Smoothing
for Time Series Data, 514

18.3 Non-Gaussian Observation Models, 520

18.4 Generalized Additive and Varying Coefficient
Models, 536

18.5 Conclusions, 540

References, 542

19. Nonparametric Bayesian Bivariate Surface Estimation 545

Michael Smith, Robert Kohn, and Paul Yau

19.1 Introduction, 545

19.2 Bayesian Model and Subset Selection, 547

19.3 Bivariate Surface Estimation, 554

19.4 Robust Surface Estimation, 568

19.5 Surface Estimation for Time Series Data, 575

19.6 Alternative Bases and Model Mixing, 576

References, 578
