# Noise in Spatially Extended Systems

With 120 Illustrations

Springer

# Contents

<b>Preface</b>	<b>vii</b>
<b>Acknowledgments</b>	<b>ix</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Fluctuations in a Macroscopic World . . . . .	1
1.1.1 Describing Stochastic Dynamics . . . . .	3
1.1.2 Stochastic Partial Differential Equations . . . . .	4
1.1.3 Experimental Setups . . . . .	4
1.1.4 Numerical Experiments . . . . .	10
1.1.5 Noise-Induced Phenomena . . . . .	10
1.2 Transitions in Zero-Dimensional Systems . . . . .	11
1.2.1 Internal Noise . . . . .	12
1.2.2 External Noise . . . . .	15
1.3 Phase Transitions in $d$ -Dimensional Systems . . . . .	23
1.3.1 Equilibrium Phase Transitions . . . . .	23
1.3.2 Nonequilibrium Phase Transitions . . . . .	32
1.3.3 Dynamics of Phase Transitions . . . . .	37
1.4 Pattern Formation . . . . .	39
1.4.1 Order-Parameter Equations . . . . .	40
1.4.2 Pattern-Forming Instabilities . . . . .	42
1.4.3 Amplitude Equations and Beyond . . . . .	43
1.4.4 Real Patterns . . . . .	44
1.5 Other Effects of Noise in Extended Media . . . . .	45

1.5.1	Noise-Sustained Convective Structures . . . . .	45
1.5.2	Spatial Stochastic Resonance . . . . .	48
<b>2</b>	<b>Fundamentals and Tools</b>	<b>53</b>
2.1	Introduction to Stochastic Partial Differential Equations	53
2.1.1	Generalities and Modeling . . . . .	54
2.1.2	Stochastic Calculus in SPDEs . . . . .	58
2.1.3	Fokker–Planck Equation for Spatially Extended Systems . . . . .	64
2.1.4	Statistical Moments and Correlations . . . . .	65
2.2	Analytical Techniques . . . . .	66
2.2.1	Mean-Field Analysis and Beyond . . . . .	66
2.2.2	Small Noise Expansions . . . . .	69
2.2.3	Linear Stability Analysis . . . . .	72
2.2.4	Dynamic Renormalization Group Analysis . . . . .	76
2.3	Numerical Techniques . . . . .	85
2.3.1	Algorithms for Solving SPDEs . . . . .	85
2.3.2	Generation of Correlated Noises . . . . .	92
<b>3</b>	<b>Noise-Induced Phase Transitions</b>	<b>115</b>
3.1	Additive Noise . . . . .	115
3.1.1	Ginzburg–Landau Model with Colored Noise . . .	116
3.1.2	Noise-Induced Shift of the Transition Point . . .	117
3.1.3	Fokker–Planck Analysis . . . . .	124
3.1.4	Dynamic Renormalization Group Analysis . . . . .	127
3.2	Additive and Multiplicative Noise . . . . .	130
3.2.1	Ginzburg–Landau Model with Multiplicative Noise	131
3.2.2	Pure Noise-Induced Phase Transitions . . . . .	137
3.2.3	Noise-Induced First-Order Phase Transitions . .	150
3.3	Multiplicative Noise . . . . .	153
3.3.1	Multiplicative Noise Universality Class . . . . .	153
3.3.2	Disordering Transitions Induced by Pure Multiplicative Noise . . . . .	155
3.3.3	Numerical Simulation Results . . . . .	157
<b>4</b>	<b>Dynamics of Phase Transitions with Fluctuations</b>	<b>159</b>
4.1	Internal Multiplicative Noise . . . . .	159
4.1.1	Mesoscopic Derivation . . . . .	160
4.1.2	Application to Phase Separation Dynamics . . . .	167
4.1.3	Extension to Nonconserved Order Parameter . . .	172
4.2	Noise-Induced Phase Separation . . . . .	174
4.2.1	External Fluctuations in Phase Separation . . . .	175
4.2.2	Stability Analysis . . . . .	176
4.2.3	Phase Diagram . . . . .	177

<b>5 Pattern Formation Under Multiplicative Noise</b>	<b>185</b>
5.1 Multiplicative Noise in the Swift–Hohenberg Model . . . . .	185
5.1.1 A Model Equation for Rayleigh–Bénard Convection . . . . .	186
5.1.2 Fluctuations in the Control Parameter . . . . .	188
5.1.3 Effect of a Spatially Correlated Noise . . . . .	203
5.2 Pure Noise-Induced Patterns . . . . .	211
<b>6 Front Dynamics and External Fluctuations</b>	<b>219</b>
6.1 External Fluctuations in Deterministic Fronts . . . . .	219
6.1.1 Front Propagation in Fluctuating Media . . . . .	221
6.1.2 Theoretical Approach and Predictions . . . . .	227
6.1.3 Noise Effects on the Front Selection Problem . . . . .	230
6.1.4 Profile Shape and Velocity Shift . . . . .	234
6.1.5 Front Diffusive Spreading . . . . .	238
6.2 Noise-Induced Fronts . . . . .	246
6.2.1 Modeling and Analytical Results . . . . .	246
6.2.2 Numerical Results . . . . .	247
6.3 Reactive Fronts under Turbulent Advection . . . . .	252
6.3.1 Modeling . . . . .	252
6.3.2 A Gaussian Turbulence? . . . . .	255
6.3.3 Theoretical Analysis and Numerical Results . . . . .	255
6.3.4 The Role of Different Spectra . . . . .	260
<b>7 Conclusions</b>	<b>263</b>
7.1 What Has Been Done . . . . .	263
7.2 What Needs to Be Done . . . . .	265
<b>A Continuum and Discrete Space Descriptions</b>	<b>269</b>
A.1 Coarse Graining . . . . .	269
A.2 Continuum Limit and Functional Analysis . . . . .	270
<b>B Fourier Transforms</b>	<b>273</b>
B.1 Continuum Fourier Transforms . . . . .	273
B.2 Discrete Fourier Transforms . . . . .	274
B.3 Discrete Fourier Transform of a Real Uncorrelated Field	275
<b>C Fokker–Planck Equation for an Additive Colored Noise</b>	<b>279</b>
<b>D Colored Noise in a Linear Model</b>	<b>283</b>
<b>E Fokker–Planck Equation for a Multiplicative Noise</b>	<b>285</b>
