ATOMIC AND MOLECULAR COLLISIONS

SIR HARRIE MASSEY, F.R.S.
University College, University of London

TAYLOR & FRANCIS LTD
London
1979

contents

Preface v

Introduction xv

Chapter 1 PARTICLES AND WAVES 1
1.1 Particles—Elastic Collisions 2
1.2 Centre of Mass and Laboratory Co-ordinates 5
1.3 The Specification of Collision Probabilities—the Concept of Collision Cross Section 9
1.4 The Impact Parameter in a Classical Collision 10
1.5 Angular Momentum 12
1.6 Waves 13
1.7 Interference and Diffraction 15
1.8 Scattering of Waves—Shadow Scattering 17
1.9 The Wave Equation 18

Chapter 2 WAVE MECHANICS—WAVE–PARTICLE DUALISM—THE UNCERTAINTY PRINCIPLE—SCATTERING CROSS-SECTIONS 20
2.1 Wave–Particle Dualism 20
2.2 Material Waves 23
2.3 Allowed Values of the Energy and Other Dynamical Quantities 24
2.4 The Uncertainty Principle 28
2.5 General Remarks about Wave versus Classical Mechanics 28
2.6 Collision Cross Sections in Wave Mechanics 29
2.7 Quantum Theory of Scattering by a Centre of Force 32
2.8 The Differential Scattering Cross-Section in Wave Mechanics 35
2.9 The Variation of the Phase Shifts with the Angular Momentum Quantum Number 36
2.10 Generalization to Collisions Involving Atomic Systems 37

Chapter 3 ATOMS 39
3.1 Atomic Structure—Some General Features 39

	3.2	Electron Spin	41
	3.3	Combination of Angular Momenta	41
	3.4	The Hydrogen Atom	42
	3.5	Optical Radiation from Excited Hydrogen Atoms—Allowed and Forbidden Transitions	43
	3.6	Hyperfine Structure	45
	3.7	Continuous Spectra	45
	3.8	Spontaneous Emission Coefficients	46
	3.9	Absorption of Energy by Hydrogen Atoms	46
	3.10	Probability Charge Distributions in Different States of a Hydrogen Atom	47
	3.11	Electric Field of a Hydrogen Atom	49
	3.12	Deuterium	50
	3.13	The Structure of Complex Atoms—the Pauli Principle	51
	3.14	The Ground State of Helium	51
	3.15	The Ground State of Lithium	52
	3.16	The Ground States of Other Atoms	52
	3.17	Excited States of Atoms	54
	3.18	Excited States of Helium	55
	3.19	Doubly Excited States—Autoionization	55
	3.20	Negative Atomic Ions	57
	3.21	Doubly Excited States of Negative Ions—Autodetachment	58
Chapter	4	MOLECULES	60
	4.1	The Interaction between Atoms	60
	4.2	Interaction between Hydrogen Atoms	61
	4.3	Examples of Other Stable Diatomic Molecules	62
	4.4	Excited Electronic States of Molecules	62
	4.5	Interactions between Ions and Atoms	62
	4.6	Molecular Vibration and Rotation	64
	4.7	Behaviour of the Nuclei in a Transition between Electronic States—the Franck–Condon Principle	66
Chapter	5	THE SCATTERING OF SLOW ELECTRONS BY ATOMS—THE RAMSAUER–TOWNSEND EFFECT	68
	5.1	Diffusion of an Electron Swarm in a Gas under the Action of an Electric Field	69
	5.2	The Measurement of Drift Velocities	71
	5.3	The Measurement of Total Cross-Sections for Scattering of Electrons by Atoms using Beam Techniques—Ramsauer's Method	73
	5.4	Results for the Rare Gases	75

5.5 Interpretation of Results for the Rare Gases in Terms of Wave Mechanics 75
5.6 The Angular Distribution of the Scattered Electrons—Experimental Methods 80
5.7 Results of Angular Distribution Measurements 83
5.8 Interactions Effective in the Scattering of Slow Electrons by Atoms 86

Chapter 6 ELECTRON SCATTERING BY ATOMS AND MOLECULES—INELASTIC SCATTERING AND RESONANCE EFFECTS 88
6.1 Introduction 88
6.2 Direct and Resonant Scattering 89
6.3 Energy Analysers 91
6.4 Experimental Methods for Studying Fine Structure in Electron Scattering 95
6.5 Typical Measurements of Fine Structure (Resonance) Effects in Elastic Scattering 98
6.6 Measurement of Inelastic Cross-Sections—Differential Cross-Sections 101
6.7 Cross-Sections for Ionization 102
6.8 Cross-Sections for Excitation of Bound States 104

Chapter 7 COLLISIONS INVOLVING ELECTRON CAPTURE—RECOMBINATION AND ATTACHMENT 108
7.1 Recombination and Attachment Coefficient 108
7.2 Radiative Recombination and Attachment 109
7.3 Dissociative Recombination and Attachment 111
7.4 The Experimental Study of Dissociative Recombination 114
7.5 Results of Recombination Measurements—the Rare Gases 120
7.6 Result of Recombination Measurements—Molecular Gases 123
7.7 The Experimental Measurements of Attachment Rates 124
7.8 Some Results of Attachment Experiments—Dissociative Attachment in O_2 128
7.9 Dissociative Attachment in CO 131
7.10 Attachment to Polyatomic Molecules—Nitrous Oxide (N_2O) 132
7.11 Attachment to Sulphur Hexafluoride (SF_6) 134
7.12 Attachment to Other Polyatomic Molecules 135
7.13 The Electron Attachment Detector 135

Chapter 8 COLLISIONS BETWEEN NEUTRAL ATOMIC AND MOLECULAR SYSTEMS—A GENERAL SURVEY 139
8.1 Atom–Atom Collisions—Elastic Scattering 139
8.2 Collisions Involving Molecules—Excitation and Transfer of Vibration and Rotation 142
8.3 Dispersion and Absorption of High-Frequency Sound 144
8.4 Persistence of Vibration in Shock Wave Experiments 146
8.5 Some Results of Vibrational Relaxation Measurements 146
8.6 Relaxation in H_2 and D_2—Rotational Persistence 148
8.7 Inelastic Collisions Involving Electronic Excitation 149
8.8 Excitation Transfer—Sensitized Fluorescence 151
8.9 Ionization by Metastable Atom Impact 152
8.10 Production of Ion Pairs in Neutral–Neutral Collisions 153

Chapter 9 SEMI-CLASSICAL COLLISIONS BETWEEN ATOMS 156
9.1 The Form of the Interaction Energy between Gas Atoms 157
9.2 Classical Theory of Collisions between Gas Atoms—the Deflection Function 158
9.3 Relation between Angle of Deflection and Angle of Scattering 161
9.4 The Angles of Deflection and of Scattering for Interactions between Rare Gas Atoms 163
9.5 The Optical Rainbow 165
9.6 The Glory Singularity 167
9.7 The Classical Differential Cross-Section 167
9.8 Orbiting 168
9.9 The Quantum Scattering Formula near the Classical Limit—The 'Semi-Geometrical' Wave Theory of the Optical Rainbow 169
9.10 The Semi-Classical Wave Theory of the Scattering of Particles 171
9.11 Glory Undulations 174
9.12 Collisions between Similar Atoms—Symmetry Interference Effects 175
9.13 Application to Determination of Atomic Interactions 176

Chapter 10 THE EXPERIMENTAL STUDY OF ATOM–ATOM COLLISIONS AT THERMAL ENERGIES 178
10.1 Experimental Methods—General Remarks 178
10.2 The Production of Atomic Beams 180
10.3 Velocity Selection 183

10.4 Detection of Atomic Beams 185
10.5 Some Typical Experiments and Results—Scattering of Alkali Metal Atoms 186
10.6 Collisions between Helium Atoms—Symmetry Oscillations 193

Chapter 11 THERMAL COLLISIONS BETWEEN IONIZED AND NEUTRAL ATOMIC AND MOLECULAR SYSTEMS 200
11.1 The Long-range Polarization Force 200
11.2 The Condition for Orbiting 201
11.3 The Mobility of Ions in Gases 202
11.4 Ionic Reactions 204
11.5 Orbiting and Ionic Reaction Rates 206
11.6 Measurement of Ionic Reaction Rates under Thermal or Near-thermal Conditions 207
11.7 Results of Measurements of Ionic Reaction Rates 210
11.8 Charge Transfer Reactions 211
11.9 Associative Detachment 211
11.10 Rearrangement Collisions 211
11.11 Cluster Formation 212

Chapter 12 THE COLLISIONS OF ENERGETIC IONS IN GASES—CHARGE TRANSFER 213
12.1 Symmetrical Charge Transfer—Theoretical Discussion—H^+–H Collisions 213
12.2 The H^+–H Interactions 214
12.3 Elastic Scattering and Charge Transfer 215
12.4 Effect of the Identity of the Nuclei 216
12.5 Symmetrical Charge Transfer in General 217
12.6 Experimental Methods and Results—Ion Sources 218
12.7 Measurement of Total Cross-Sections for Charge Transfer 219
12.8 Results of Total Charge Transfer Cross-Section Measurements 221
12.9 Measurement of Charge Transfer Probabilities and of Differential Scattering Cross-Sections 224
12.10 Results for He^+–He Collisions and their Interpretation 226
12.11 Other Reactions of Energetic Ions in gases 227

Chapter 13 PHOTON COLLISIONS WITH ATOMS AND MOLECULES—PHOTOIONIZATION AND PHOTODETACHMENT 230
13.1 Introduction 230

13.2	Line Absorption and Stimulated Emission	232
13.3	Stimulated Emission and Laser Operation	234
13.4	Excitation of Autoionizing and Autodetaching States	236
13.5	Relation between Absorption and Photoionization Cross-Sections	238
13.6	The Experimental Study of Ionization by Single Photons—Introduction	238
13.7	Principles Involved in the Measurement of Absorption and Photoionization Cross-Sections	239
13.8	Radiation Sources	240
13.9	Photoelectron Spectroscopy	242
13.10	Some Results of Photoionization Measurements	243
13.11	Photodetachment by Single Photons	244
13.12	Measurement of Photodetachment Cross-Sections—Typical Experimental Arrangements	247
13.13	Measurement of Photoelectron Spectra from Photodetachment	248
13.14	Photodetachment from H^-—Absorption in the Sun's Atmosphere	250
13.15	Photodetachment from O^-	252
13.16	Photodetachment from Se^- and Si^-	253
13.17	Window Resonances in Photodetachment from Cs^- and Rb^-	254
13.18	Photoelectron Spectrum of O_2^-	255
13.19	Multiphoton Processes	256

Chapter 14 ATOMIC COLLISIONS IN THE EARTH'S ATMOSPHERE, THE SOLAR CORONA AND INTERPLANETARY SPACE 259

14.1	The Earth's Ionosphere	260
14.2	Theory of the Ionosphere before 1950	263
14.3	Post-war Research and the Ionosphere	265
14.4	The Present Position about Ionospheric Photochemistry	269
14.5	The Lower Ionosphere	273
14.6	Ionization and Recombination in the Solar Corona	275
14.7	Molecule Formation in Interstellar Space	278
14.8	The Problem of the CH^+ and CH Production	281

Appendices

A1	The Kinetic Theory of Gases—Effusive Flow	285
A2	High Vacuum Technique	288
A3	Supersonic Flow through a Nozzle	290

A4	The Motion of Charged Particles in Magnetic Fields	292
A5	Electron and Ion Optics	294
A6	The Detection and Measurement of Small Fluxes of Electrons, Ions and Neutral Atoms	297
A7	Mass Analysers and Selectors	299
