

Advances in Computer Architecture

GLENFORD J. MYERS

IBM Systems Research Institute

A WILEY-INTERSCIENCE PUBLICATION

JOHN WILEY & SONS, New York • Chichester • Brisbane • Toronto

Contents

PART I THE NEED FOR ARCHITECTURAL ADVANCES

- 1. A Definition of Computer Architecture** **3**
 - The Role of the Computer Architect, 6
 - References, 7
 - Exercises, 8

- 2. A Critique of the Conventional von Neumann Architecture** **9**
 - The Semantic Gap, 11
 - The von Neumann Architecture, 19
 - Other Undesirables, 21
 - References, 23
 - Exercises, 24

- 3. A Classification of Computer Architectures** **25**
 - Language-Directed Architectures, 26
 - Type-A High-Level-Language Architectures, 28
 - Type-B High-Level-Language Architectures, 29
 - Type-C High-Level-Language Architectures, 29
 - Application-Directed Architectures, 31
 - References, 33
 - Exercises, 36

4. Requisites for Improved Architectures	37
Self-Defining Data, 37	
Self-Defining Data Objects, 43	
Expression-Evaluation Stacks, 46	
Subroutine Management, 49	
Lexical-Level Addressing, 50	
Capability-Based Addressing, 52	
Variable-Size Storage Cells, 55	
References, 55	
Exercises, 56	
 PART II A LANGUAGE-DIRECTED ARCHITECTURE	
5. The Student-PL Machine	61
The Student-PL Language, 61	
SPLM Storage Structure, 63	
References, 67	
Exercises, 68	
6. Program Compilation and Execution on SPLM	69
Program Segments for IF Statements and DO Loops, 73	
Subroutine-Call Example, 77	
Significance of SPLM, 80	
Exercises, 81	
7. SPLM Instruction Set	83
Data-Access and Addressing Instructions, 84	
Data-Operation Instructions, 86	
Control Instructions, 88	
Procedure Instructions, 91	
Array-Storage Instructions, 93	
 PART III A HIGH-LEVEL-LANGUAGE ARCHITECTURE	
8. System Architecture of the SYMBOL System	97
System Configuration, 98	
Job Flow Through the System, 101	

The SYMBOL Programming Language, 103
References, 107
Exercises, 108

9. Computer Architecture of the SYMBOL System 110

Representation of Data, 110
The Name Table, 112
The Object-Code String, 117
Exercises, 124

10. SYMBOL Processor and Configuration Architecture 125

The Main Bus, 125
Memory Management, 127
The System Supervisor, 136
The Central Processor, 141
The Translator, 144
The Remaining Processors, 145
Significance of the SYMBOL System, 145
Exercises, 146

PART IV A MULTIPLE-LANGUAGE-DIRECTED ARCHITECTURE

11. The Burroughs B1700 System 151

B1700 System Architecture, 152
Implementation Considerations, 153
Storage and Performance, 154
References, 155

12. Burroughs B1700 COBOL/RPG Architecture 156

Data Types, 157
Program Parameters, 157
Storage Structure, 158
Instruction Formats, 161
Machine Instructions, 163
Reference, 174
Exercises, 175

PART V A SOFTWARE-RELIABILITY-DIRECTED ARCHITECTURE

- 13. The SWARD Machine** **179**
- Development of the Design Goals, 180
 - Evaluation of Current Architectures, 183
 - Development of the Architecture, 185
 - References, 189
- 14. Program Compilation and Execution on SWARD** **190**
- Data Types, 190
 - The Module, 198
 - Instruction Formats and Addressing, 202
 - Fault Handling, 203
 - Instruction Summary, 207
 - A One-Module Example, 210
 - A Two-Module Example, 216
 - Significance of SWARD, 222
 - Reference, 223
 - Exercises, 223
- 15. SWARD Instruction Specifications** **225**
- General Instructions, 226
 - Arithmetic Instructions, 228
 - Comparison Instructions, 230
 - Boolean Instructions, 232
 - String Instructions, 233
 - Control Instructions, 234
 - Addressing Instructions, 237
 - Debugging Instructions, 240
 - Calculation of the Address-Field Size, 242
 - Internal Storage Objects, 244

PART VI RELATED TOPICS IN COMPUTER ARCHITECTURE

- 16. Input/Output Architecture** **249**
- Front- and Back-End Processors, 250
 - Associative-Storage Processors, 252

The Relational Associative Processor, 255
The One-Level Store, 267
I/O in the SWARD Machine, 268
References, 271
Exercises, 272

17. Architecture Optimization and Tuning **273**

Instruction-Set Optimizations, 274
Operation-Code Optimization, 279
Address Optimization, 284
References, 291
Exercises, 291

18. The Art of Computer Architecture **293**

Conceptual Integrity, 293
Orthogonality, 295
Extensibility, 295
Implementation Freedom, 295
Technology Independence, 295
Formal Description, 296
Mental Compilation, 296
Language Validation, 296
References, 297

Answers to Exercises **299**

Index **309**
