

Automating with STEP 7 in STL and SCL

Programmable Controllers
SIMATIC S7-300/400

by Hans Berger

2nd revised edition, 2001

Publicis MCD Corporate Publishing

Contents

Introduction	21	2	STEP 7 Programming Software	42
1 SIMATIC S7-300/400 Programmable Controller	22	2.1	STEP 7 Basic Package	42
1.1 Structure of the Programmable Controller	22	2.1.1	Installation	42
1.1.1 Components	22	2.1.2	Authorization	42
1.1.2 S7-300 Station	22	2.1.3	SIMATIC Manager	43
1.1.3 S7-400 Station	24	2.1.4	Projects and Libraries	45
1.1.4 CPU Memory Areas	25	2.1.5	Online Help	46
1.1.5 Memory card	26	2.2	Editing Projects	46
1.1.6 System memory	26	2.2.1	Creating Projects	46
1.2 Distributed I/O	27	2.2.2	Managing, Rearranging and Archiving	48
1.2.1 DP Master System	27	2.2.3	Project Versions	49
1.2.2 DP Master	28	2.3	Configuring Stations	49
1.2.3 DP Slaves	28	2.3.1	Arranging Modules	50
1.2.4 Connection to PROFIBUS-PA	29	2.3.2	Addressing Modules	51
1.2.5 Connection to AS-Interface	29	2.3.3	Parameterizing Modules	52
1.2.6 Connection to a Serial Interface	30	2.3.4	Networking Modules with MPI	52
1.3 Communications	31	2.3.5	Monitoring and Modifying Modules	53
1.3.1 Introduction	31	2.4	Configuring the Network	53
1.3.2 Subnets	32	2.4.1	Configuring the Network View	54
1.3.3 Communications Services	34	2.4.2	Configuring a DP Master System with the Network Configuration	55
1.3.4 Connections	35	2.4.3	Configuring Connections	55
1.4 Module Addresses	36	2.4.4	Network Transitions	59
1.4.1 Signal Path	36	2.4.5	Loading the Connection Data	59
1.4.2 Slot Address	36	2.5	Creating the S7 Program	60
1.4.3 Module Start Address	36	2.5.1	Introduction	60
1.4.4 Diagnostics Address	37	2.5.2	Symbol Table	60
1.4.5 Address for Bus Nodes	38	2.5.3	STL Program Editor	62
1.5 Address Areas	38	2.5.4	SCL Program Editor	65
1.5.1 User Data Area	38	2.5.5	Rewiring	67
1.5.2 Process Image	39	2.5.6	Address Priority	67
1.5.3 Bit Memories	40	2.5.7	Reference Data	68
		2.5.8	Multilingual Comments and Display Texts	69

5.3	RS Flipflop Function	125	7	Timer Functions.	142
5.3.1	Memory Functions with Reset Priority	125	7.1	Programming a Timer	142
5.3.2	Memory Function with Set Priority.	125	7.1.1	Starting a Timer	142
5.3.3	Memory Function in a Binary Logic Operation	125	7.1.2	Specifying the Time	143
5.4	Edge Evaluation	126	7.1.3	Resetting a Timer.	144
5.4.1	Positive Edge	128	7.1.4	Enabling a Timer	144
5.4.2	Negative Edge	128	7.1.5	Checking a Timer.	144
5.4.3	Testing a Pulse Memory Bit.	128	7.1.6	Sequence of Timer Instructions	145
5.4.4	Edge Evaluation in a Binary Logic Operation	128	7.1.7	Clock Generator Example	145
5.4.5	Binary Scaler	129	7.2	Pulse Timers	146
5.5	Example of a Conveyor Belt Control System	129	7.3	Extended Pulse Timers	148
6	Move Functions.	133	7.4	On-Delay Timers	150
6.1	General Remarks on Loading and Transferring Data	133	7.5	Retentive On-Delay Timers	152
6.2	Load Functions	135	7.6	Off-Delay Timers.	154
6.2.1	General Representation of a Load Function	135	7.7	IEC Timer Functions	156
6.2.2	Loading the Contents of Memory Locations	135	7.7.1	Pulse Generation SFB 3 TP	156
6.2.3	Loading Constants.	136	7.7.2	On Delay SFB 4 TON	157
6.3	Transfer Functions.	137	7.7.3	Off Delay SFB 5 TOF	157
6.3.1	General Representation of a Transfer Function	137	8	Counter Functions	158
6.3.2	Transferring to Various Memory Areas.	137	8.1	Setting and Resetting Counters.	158
6.4	Accumulator Functions	138	8.2	Counting	159
6.4.1	Direct Transfers Between Accumulators	138	8.3	Checking a Counter.	159
6.5	Exchange Bytes in Accumulator 1	139	8.4	Enabling a Counter	160
6.6	System Functions for Data Transfer	139	8.5	Sequence of Counter Instructions	161
6.6.1	Copying a Data Area	140	8.6	IEC Counter Functions	162
6.6.2	Copying a Data Area without Gaps	140	8.6.1	Up Counter SFB 0 CTU	162
6.6.3	Filling a Data Area	140	8.6.2	Down Counter SFB 1 CTD.	162
6.6.4	Copying STRING Variables	141	8.6.3	Up-Down Counter SFB 2 CTUD.	163
			8.7	Parts Counter Example	163
				Digital Functions	166
			9	Comparison Functions	167
			9.1	General Representation of a Comparison Function.	167
			9.2	Description of the Comparison Functions	168
			9.3	Comparison Function in a Logic Operation	169

10	Arithmetic Functions	171	Program Flow Control	193
10.1	General Representation of an Arithmetic Function	171	15	Status Bits
10.2	Calculating with Data Type INT.	171	15.1	Description of the Status Bits
10.3	Calculating with Data Type DINT	173	15.2	Setting the Status Bits and the Binary Flags.
10.4	Calculating with Data Type REAL	174	15.3	Evaluating the Status Bit
10.5	Successive Arithmetic Functions.	175	15.4	Using the Binary Result.
10.6	Adding Constants to Accumulator 1	175	16	Jump Functions
10.7	Decrementing and Incrementing.	176	16.1	Programming a Jump Function
11	Math Functions	177	16.2	Unconditional Jump.
11.1	Processing a Math Function	177	16.3	Jump Functions with RLO and BR
11.2	Trigonometric Functions.	177	16.4	Jump Functions with CC0 and CC1
11.3	Arc Functions	178	16.5	Jump Functions with OV and OS
11.4	Other Math Functions	178	16.6	Jump Distributor
12	Conversion Functions	180	16.7	Loop Jump
12.1	Processing a Conversion Function	180	17	Master Control Relay
12.2	Converting INT and DINT Numbers	181	17.1	MCR Dependency
12.3	Converting BCD Numbers.	181	17.2	MCR Area.
12.4	Converting REAL Numbers	182	17.3	MCR Zone
12.5	Other Conversion Functions	183	17.4	Setting and Resetting I/O Bits
13	Shift Functions	185	18	Block Functions
13.1	Processing a Shift Function	185	18.1	Block Functions for Code Blocks
13.2	Shifting.	186	18.1.1	Block Calls: General
13.3	Rotating	188	18.1.2	CALL Call Statement.
14	Word Logic	190	18.1.3	UC and CC Call Statements
14.1	Processing a Word Logic Operation.	190	18.1.4	Block End Functions
14.2	Description of the Word Logic Operations	192	18.1.5	Temporary Local Data
			18.1.6	Static Local Data

18.2	Block Functions for Data Blocks	220	20.2	Scan Cycle Control	246
18.2.1	Two Data Block Registers.	220	20.2.1	Process Image Updating	246
18.2.2	Accessing Data Addresses.	221	20.2.2	Scan Cycle Monitoring Time.	247
18.2.3	Open Data Block	223	20.2.3	Minimum Scan Cycle Time, Background Scanning	248
18.2.4	Exchanging the Data Block Registers.	223	20.2.4	Response Time	249
18.2.5	Data Block Length and Number.	224	20.2.5	Start Information	250
18.2.6	Special Points in Data Addressing	224	20.3	Program Functions	252
18.3	System Functions for Data Blocks	225	20.3.1	Real-Time Clock	252
18.3.1	Creating a Data Block	225	20.3.2	Read System Clock.	252
18.3.2	Deleting a Data Block	226	20.3.3	Run-Time Meter	252
18.3.3	Testing a Data Block	226	20.3.4	Compressing CPU Memory	253
18.4	Null Operations	226	20.3.5	Waiting and Stopping	253
18.4.1	NOP Statements	226	20.3.6	Multiprocessing Mode	254
18.4.2	Program Display Statements	227	20.4	Communication via Distributed I/O	255
19	Block Parameters	228	20.4.1	Addressing Distributed I/O.	255
19.1	Block Parameters in General	228	20.4.2	Configuring Distributed I/O	258
19.1.1	Defining the Block Parameters	228	20.4.3	System Functions for Distributed I/O	266
19.1.2	Processing the Block Parameters	229	20.5	Global Data Communication	269
19.1.3	Declaration of the Block Parameters	229	20.5.1	Fundamentals	269
19.1.4	Declaration of the Function Value	230	20.5.2	Configuring GD communication	271
19.1.5	Initializing Block Parameters	231	20.5.3	System Functions for GD Communication	273
19.2	Formal Parameters.	231	20.6	SFC Communication	274
19.3	Actual Parameters	234	20.6.1	Station-Internal SFC Communication	274
19.4	“Passing On” Block Parameters.	237	20.6.2	System Functions for Data Interchange Within a Station	275
19.5	Examples	238	20.6.3	Station-External SFC Communication	276
19.5.1	Conveyor Belt Example	238	20.6.4	System Functions for Station- External SFC Communication	278
19.5.2	Parts Counter Example	239	20.7	SFB Communication	280
19.5.3	Feed Example	239	20.7.1	Fundamentals	280
	Program Processing	243	20.7.2	Two-Way Data Exchange	281
20	Main Program	244	20.7.3	One-Way Data Exchange.	283
20.1	Program Organization	244	20.7.4	Transferring Print Data	284
20.1.1	Program Structure	244	20.7.5	Control Functions.	284
20.1.2	Program Organization	245	20.7.6	Monitoring Functions.	285

21	Interrupt Handling	287	22.3	Types of Restart.	303
21.1	General Remarks.	287	22.3.1	START-UP Mode.	303
21.2	Hardware Interrupts	288	22.3.2	Cold Restart.	303
21.2.1	Generating a Hardware Interrupt	289	22.3.3	Complete Restart	305
21.2.2	Servicing Hardware Interrupts. .	289	22.3.4	Warm Restart	305
21.2.3	Configuring Hardware Interrupts with STEP 7	290	22.4	Ascertaining a Module Address.	306
21.3	Watchdog Interrupts	290	22.5	Parameterizing Modules	308
21.3.1	Handling Watchdog Interrupts. .	290	23	Error Handling	311
21.3.2	Configuring Watchdog Interrupts with STEP 7	291	23.1	Synchronous Errors	311
21.4	Time-of-Day Interrupts	292	23.2	Synchronous Error Handling . .	312
21.4.1	Handling Time-of-Day Interrupts.	292	23.2.1	Error Filters	312
21.4.2	Configuring Time-of-Day Interrupts with STEP 7.	293	23.2.2	Masking Synchronous Errors . .	314
21.4.3	System Functions for Time-of-Day Interrupts	293	23.2.3	Unmasking Synchronous Errors	314
21.5	Time-Delay Interrupts	294	23.2.4	Reading the Error Register . . .	315
21.5.1	Handling Time-Delay Interrupts.	294	23.2.5	Entering a Substitute Value. . .	315
21.5.2	Configuring Time-Delay Interrupts with STEP 7.	295	23.3	Asynchronous Errors	315
21.5.3	System Functions for Time-Delay Interrupts	295	23.4	System Diagnostics	317
21.6	Multiprocessor Interrupt.	296	23.4.1	Diagnostic Events and Diagnostic Buffer	317
21.7	Handling Interrupts	297	23.4.2	Writing User Entries in the Diagnostic Buffer	318
22	Restart Characteristics.	299	23.4.3	Evaluating Diagnostic Interrupts	318
22.1	General Remarks.	299	23.4.4	Reading the System Status List .	319
22.1.1	Operating Modes.	299	Variable Handling	320	
22.1.2	HOLD Mode.	300	24	Data Types	321
22.1.3	Disabling the Output Modules. .	300	24.1	Elementary Data Types	321
22.1.4	Restart Organization Blocks . . .	300	24.1.1	Declaration of Elementary Data Types	321
22.2	Power-Up	301	24.1.2	BOOL, BYTE, WORD, DWORD, CHAR	321
22.2.1	STOP Mode	301	24.1.3	Number Representations	322
22.2.2	Memory Reset	301	24.1.4	Time Representations	325
22.2.3	Retentivity	302	24.2	Complex Data Types	326
22.2.4	Restart Parameterization.	302	24.2.1	DATE_AND_TIME	326
			24.2.2	STRING.	327
			24.2.3	ARRAY.	328
			24.2.4	STRUCT	330

18

28.5	REPEAT Statement	375	30.7	Programming Your Own Functions with STL	394
28.6	CONTINUE Statement	376	30.8	Brief Description of the SCL Examples	395
28.7	EXIT Statement	376	30.8.1	Conveyor Example	395
28.8	RETURN Statement	376	30.8.2	Message Frame Example	395
28.9	GOTO Statement.	376	30.8.3	General Examples.	396
29	SCL Blocks	378	31	IEC Functions	397
29.1	SCL Blocks – General	378	31.1	Conversion Functions.	397
29.2	Programming SCL Blocks.	378	31.2	Comparison Functions	399
29.2.1	Function FC Without a Function Value.	379	31.3	STRING Functions	400
29.2.2	Function FC With Function Value.	379	31.4	Date/Time-of-Day Functions	402
29.2.3	Function Block FB.	380	31.5	Numerical Functions	403
29.2.4	Temporary Local Data.	380	Appendix	405	
29.2.5	Static Local Data.	381	32	S5/S7 Converter	406
29.2.6	Block Parameters	381	32.1	General	406
29.2.7	Formal Parameters	382	32.2	Preparation	407
29.3	Calling SCL Blocks	382	32.2.1	Checking Executability on the Destination System (PLC)	407
29.3.1	Function FC without Function Value.	383	32.2.2	Checking Program Execution Characteristics.	407
29.3.2	Function FC with Function Value.	383	32.2.3	Checking the Modules	409
29.3.3	Function Block with its Own Data Block	383	32.2.4	Checking the Addresses.	409
29.3.4	Function Block as Local Instance	384	32.3	Converting	410
29.3.5	Actual Parameters	385	32.3.1	Creating Macros.	410
29.4	EN/ENO Mechanism	385	32.3.2	Preparing the Conversion	411
29.4.1	OK Variable	385	32.3.3	Starting the Converter.	411
29.4.2	ENO Output	385	32.3.4	Convertible Functions.	412
29.4.3	EN Input	386	32.4	Post-Editing	413
30	SCL Functions	387	32.4.1	Creating the STEP 7 Project	413
30.1	Timer Functions	387	32.4.2	Unconvertible Functions	414
30.2	Counter Functions	388	32.4.3	Address Changes	414
30.3	Math Functions	389	32.4.4	Indirect Addressing	415
30.4	Shifting and Rotating	389	32.4.5	Access to “Excessively Long” Data Blocks	415
30.5	Conversion Functions	390	32.4.6	Working with Absolute Addresses	417
30.5.1	Implicit Conversion Functions.	390	32.4.7	Parameter Initialization	417
30.5.2	Explicit Conversion Functions.	390	32.4.8	Special Function Organization Blocks.	417
30.6	Programming Your Own Functions with SCL	392	32.4.9	Error Handling	417

33	Block Libraries	420			
33.1	Organization Blocks	420	34.3	Program Flow Control	429
33.2	System Function Blocks	421	34.3.1	Jump Functions	429
33.3	IEC Function Blocks	423	34.3.2	Master Control Relay	429
33.4	S5-S7 Converting Blocks	423	34.3.3	Block Functions	429
33.5	TI-S7 Converting Blocks	425	34.4	Indirect Addressing	430
33.6	PID Control Blocks	425	35	SCL Statement and Function	
33.7	Communication Blocks	425		Overview	431
34	STL Operation Overview . . .	426	35.1	Operators	431
34.1	Basic Functions	426	35.2	Control Statements	431
34.1.1	Binary Logic Operations	426	35.3	Block Calls	431
34.1.2	Memory Functions	427	35.4	SCL Standard Functions	432
34.1.3	Transfer Functions	427	35.4.1	Timer Functions	432
34.1.4	Timer Functions	427	35.4.2	Counter Functions	432
34.1.5	Counter Functions	427	35.4.3	Conversion functions	432
34.2	Digital Functions	428	35.4.4	Math Functions	433
34.2.1	Comparison Functions	428	35.4.5	Shift and Rotate	433
34.2.2	Math Functions	428			
34.2.3	Arithmetic Functions	428	Index		434
34.2.4	Conversion functions	428	Abbreviations		441
34.2.5	Shift functions	429	STEP 7 Demo Software		442
34.2.6	Word Logic Operations	429
