Vladimir M. Shalaev (Ed.)

Optical Properties of Nanostructured Random Media

With 185 Figures

Springer

Contents

Nanocomposite Materials for Nonlinear Optics Based on Local Field Effects
John E. Sipe and Robert W. Boyd 1

1. Introduction 1
2. Linear Optical Properties 3
3. Nonlinear Optical Properties 8
4. Recent Advances 14
References 17

Response of Composite Media Made of Weakly Nonlinear Constituents
David J. Bergman and David G. Stroud 19

1. Introduction 19
2. Perturbation Theory 20
3. Limiting Cases and Exactly Solvable Microstructures 24
   3.1. Parallel Cylinders and Parallel Slabs 24
   3.2. Dilute Regime and Clausius–Mossotti Approximation 25
4. Self-Consistent Effective Medium Approximation and Its Breakdown . 27
5. Quasi-static Resonances: Enhancement of Nonlinearity and Intrinsic Optical Bistability 31
   5.1. Solvable Microstructures 32
   5.2. The Principle of "Zero Virtual Work" and Its Application 35
   5.3. Harmonic Generation and Induced Nonlinearity 37
References 38

Third-Order Nonlinear Properties of Au Clusters Containing Dielectric Thin Films
Hongru Ma, Ping Sheng, and George K. L. Wong 41

1. Introduction 41
2. Experimental 42
   2.1. Preparation and Characterization of Samples 42
   2.2. Nonlinear Optical Measurements 45

3. Theoretical 49
3.1. General Theory 49
3.2. Application of the Theory to Four Effective Medium Theories ... 53
3.3. Illustrations and Comparison of Theory with Experiments 57
References 60

Linear and Nonlinear Optical Properties of Quasi-Periodic One-Dimensional Structures
Concita Sibilia, Mario Bertolotti, Marco Centini, Giuseppe D'Aguanno, Michael Scalora, Mark J. Bloemer, and Charles M. Bowden 63

1. Introduction 63
2. Something about Fractals 64
3. Optical Properties of Filters Based on a Fractal Code 66
4. Dispersive Properties of One-Dimensional Filters 74
5. Metal–Dielectric Quasi-Periodic Filters 76
6. Nonlinear Model of the Filter 78
7. Mesoscopic Layered Structures 85
8. Conclusions 89
References 89

Optical Nonlinearities of Fractal Composites
Vladimir M. Shalaev 93

1. Introduction 93
2. Local-Field Enhancement in Nanospheres and Nanospheroids 97
3. Local-Field Enhanced Optical Responses in Fractal Aggregates 101
4. Enhanced Optical Nonlinearities in Fractals 106
References 111

Nonlinear Optical Effects and Selective Photomodification of Colloidal Silver Aggregates
Vladimir P. Drachev, Sergey V. Perminov, Sergey G. Rautian, and Vladimir P. Safonov 113

1. Spectral Dependence of Selective Photomodification in Colloidal Silver Aggregates 116
2. Local Optical Nonlinearities in Silver Colloids 124
3. Nonlocal Optical Nonlinearities in Silver Colloids 131
3.1. Chirality of Plasmon Modes 131
3.2. Experiments on Nonlinear Gyrotropy in a Macroscopic Sample . 136
4. Conclusion 142
References 143

Fractal-Microcavity Composites: Giant Optical Responses
Won-Tae Kim, Vladimir P. Safonov, Vladimir P. Drachev, Viktor A. Podolskiy, Vladimir M. Shalaev, and Robert L. Armstrong .. 149

1. Introduction 149
2. Optical Properties of the Composites 150
   2.1. Fractal Silver Aggregates 151
   2.2. Microcavities 151
   2.3. Composites 152
3. Lasing in Fractal-Microcavity Composites 154
4. Ultra-Broadband 200–800 nm Light Emission 159
References 166

Theory of Nonlinear Optical Responses in Metal-Dielectric Composites
Andrey K. Sarychev and Vladimir M. Shalaev 169

1. Introduction 169
2. Percolation and Anderson Transition Problem 172
3. Scaling in Local-Field Distribution 174
4. Enhanced Optical Nonlinearities 181
References 183

Surface-Plasmon-Enhanced Nonlinearities in Percolating 2-D Metal–Dielectric Films: Calculation of the Localized Giant Field and Their Observation in SNOM
Patrice Gadenne and Jean C. Rivoal 185

1. Introduction 185
2. Semicontinuous Fractal Metallic Films 186
   2.1. Thin Film Deposition 187
   2.2. Nonoptical Characterizations 188
   2.3. Linear Optical Measurements 192
   2.4. Linear Optical Properties in the Percolation Regime 194
3. Enhancement of Optical Processes in Semicontinuous Metallic Films 195
   3.1. Plasmon Resonance 195
   3.2. Shalaev–Sarychev Approach 196
   3.3. Anderson Localization 198
   3.4. The Percolation Regime 199
4. Experimental Observation of "Hot Spots" Using a Scanning Near-Field Optical Microscope 201
   4.1. Near-Field Versus Far-Field Imaging 201
   4.2. Fibers or Tips? 202
   4.3. The Setup 204
   4.4. Experimental Observation of "Hot Spots" 205

5. Conclusion 209
References 209

SERS and the Single Molecule
Martin Moskovits, Li-Lin Tay, Jody Yang and Thomas Haslett 215

1. Introduction 215
2. Results and Discussion 217
3. Interpretation 222
4. Conclusion 224
References 225

Nonlinear Raman Probe of Single Molecules Attached to Colloidal Silver and Gold Clusters
Katrin Kneipp, Harald Kneipp, Irving Itzkan, Ramachandra R. Dasari, Michael S. Feld and Mildred S. Dresselhaus 227

1. Introduction 227
2. Surface-Enhanced Linear and Nonlinear Raman Scattering 229
   2.1. Experimental 229
   2.2. Surface-Enhanced Linear Raman Scattering 231
   2.3. Surface-Enhanced Raman Scattering from Single Wall Carbon Nanotubes 236
   2.4. Pumped Anti-Stokes Raman Scattering 236
   2.5. Surface-Enhanced Hyper-Raman Scattering (SEHRS) 239
3. Discussion 242
References 245

Electromagnetic Response of Ferromagnetic Cermet: Superparamagnetic Transition
Mireille Gadenne 249

1. Introduction 249
2. Description of the Materials Studied 250
   2.1. Cermet 250
   2.2. Definition of a Ferromagnetic Mono-Domain Particle 250
3. Magnetic Anisotropy 251
   3.1. Relaxation Time 252
   3.2. Magnetization and Coercive Field 253
   3.3. Relation between Measuring Time, Critical Volume, and Blocking Temperature T_b 253
4. Interaction with an Electromagnetic Wave: Theoretical Approach 255
   4.1. Study of the Effective Dielectric Function 256
   4.2. Study of Effective Magnetic Permeability of a Cermet 256

5. Numerical Results and Influence of Various Parameters 260
5.1. Superparamagnetism 260
5.2. Influence of the Filling Factor 260
5.3. Variations of Magnetic Permeability versus Frequency 261
5.4. Influence of the Particle Size 261
5.5. Influence of Temperature on the Variation in μ versus Frequency 263
6. Consequences on Optical Absorption 264
6.1. Expression of Reflectance and Transmittance of a Thin Magnetic Film 265
6.2. Application to Cermet: Curves in the Spectral Range Corresponding to the Relaxation Time τ_0 267
7. Conclusion 272
References 272

Manipulating Light with a Magnetic Field
Bart A. van Tiggelen and Geert L. J. A. Rikken 275

1. Introduction 275
2. Magneto-Optics of Homogeneous Media 276
2.1. Magnetodeflection of Light 278
2.2. Bending of Light by Magnetic Fields 279
3. Magneto-Optics of Heterogeneous Media 281
3.1. Single Magneto-Mie Scattering 281
3.2. Multiple Magnetoscattering of Light 282
3.3. Theory of Magnetodiffusion 285
3.4. Experiments on Magnetodiffusion 286
Note Added in Proof 299
References 299

Random Lasers with Coherent Feedback
Hui Cao 303

1. Introduction 303
2. Two Kinds of Random Lasers 304
3. Random Lasers with Resonant Feedback 310
4. Microlasers Made of Disordered Media 320
5. Theoretical Modeling 324
6. Conclusion 326
References 327

Localization Phenomena in Elastic Surface Plasmon Polariton Scattering
Sergey I. Bozhevolnyi 329

1. Introduction 329
2. Near-Field Mapping of Surface Plasmon Polaritons 331
   2.1. Elastic and Inelastic Scattering 331
   2.2. Topographical Artifacts 333
   2.3. Influence of a Probe 334
   2.4. Image Formation 335
3. Localization of Surface Plasmon Polaritons 340
   3.1. Single and Multiple Scattering 340
   3.2. Observation of Localized Surface Polaritons 343
   3.3. Statistics of Surface Polariton Intensity Distributions 349
4. Conclusions 354
References 355

Multiple-Scattering Phenomena in the Second-Harmonic Generation of Light Reflected from and Transmitted Through Randomly Rough Metal Surfaces
Tamara A. Leskova, Alexei A. Maradudin and Eugenio R. Méndez 359

1. Introduction 359
2. Characterization of a Random Surface 361
3. Clean Metal Surfaces 363
   3.1. Linear and Nonlinear Boundary Conditions 364
   3.2. Strongly Rough Surfaces 368
   3.3. Weakly Rough Surfaces 382
4. The Kretschmann Geometry 406
   4.1. Linear and Nonlinear Boundary Conditions 409
   4.2. Strongly Rough Surfaces 412
   4.3. Weakly Rough Surfaces 427
5. Conclusions 435
References 439
