San Diego San Francisco Singapore Sydney Tokyo

CONTENTS

Contributors	xi
Acknowledgments	xv

PART I Preface and Perspectives on Cell–Matrix Adhesion

Preface <i>Josephine C. Adams</i>	3
Cell–Matrix Interactions: The View from the Outside <i>Paul Bornstein</i>	7
Matrix and Meaning <i>Martin A. Schwartz</i>	13
Cell–Matrix Adhesion Research and the Development of Biotherapeutics <i>Roy R. Lobb</i>	17

PART II Matrix Methodologies

1. Detection and Purification of Instructive Extracellular Matrix Components with Monoclonal Antibody Technologies <i>Susana G. Gil, Randy O. Sigle, and William G. Carter</i>	
I. Introduction	28
II. Methods for Detecting ECM Components That Instruct Cell Responses in Reporter Cells	32
III. Preparation of Mabs for Identification of Instructive ECM	41
IV. Purification of Instructive ECM with Mabs and Interactions with Reporter Cells	47
V. Summary	49
References	49
2. Isolation and Purification of Proteoglycans <i>John M. Whitelock and Renato V. Iozzo</i>	
I. Overview and Scope	53
II. Extraction of Proteoglycans	55

III. Radiolabeling of Proteoglycans for Ease of Purification	57
IV. Anion-Exchange Chromatography	57
V. Hydrophobic Interaction Chromatography	59
VI. Gel Filtration Chromatography	60
VII. Immunoaffinity Chromatography	61
VIII. Quantification and Characterization	63
References	66
3. Expression of Recombinant Matrix Components Using Baculoviruses	
<i>Deane F. Mosher, Kristin G. Huwiler, Tina M. Misenheimer, and Douglas S. Annis</i>	
I. Introduction: The Importance of Recombinant Extracellular Matrix Molecules for Protein Studies	70
II. Requirements and Rationale for Development of a General Protein Expression System	70
III. Expression in Insect Cells Using pCOCO	74
IV. Results Obtained from the COCO System	78
References	80
4. Heparan Sulfate-Growth Factor Interactions	
<i>Alan C. Rapraeger</i>	
I. Introduction: HS Regulation of Growth Factor Signaling	83
II. Methods for Identifying the Role of HS in Growth Factor Binding and Signaling	89
III. Identification of Regulatory HS	95
IV. Analyzing the Structure of HS: General Considerations and Methodologies	102
References	104
5. Analysis of Basement Membrane Self-Assembly and Cellular Interactions with Native and Recombinant Glycoproteins	
<i>Peter D. Yurchenco, Sergei Smirnov, and Todd Mathus</i>	
I. Introduction	111
II. Native and Recombinant Basement Membrane Proteins	114
III. Analysis of Self-Assembly <i>in Vitro</i>	124
IV. Analysis of Cell-Surface Contributions to Basement Membrane Assembly	135
V. Approaches to Evaluating ECM Molecules for Assembly Interactions	136
VI. Integration of Genetic and Molecular Approaches	137
References	138
6. Preparation and Analysis of Synthetic Multicomponent Extracellular Matrix	
<i>Kim S. Midwood, Iwona Wierzbicka-Patynowski, and Jean E. Schwarzbauer</i>	
I. Introduction to the ECM	145
II. Development of Synthetic Matrices	147
III. Discussion	155
References	158

7. Analysis of Matrix Dynamics by Atomic Force Microscopy	
<i>Helen G. Hansma, Dennis O. Clegg, Efrosini Kokkoli, Emin Oroudjev, and Matthew Tirrell</i>	
I. Introduction	164
II. General Experimental Design	165
III. Probe Microscopy in Fluid: AFM Imaging	168
IV. Probe Microscopy in Fluid: Molecular Pulling/Force Spectroscopy	174
V. Probe Microscopy in Air: AFM Imaging	182
VI. Conclusion	188
References	188
8. Analysis of Matrix Degradation	
<i>H. G. Munshi and M. Sharon Stack</i>	
I. Introduction	195
II. Experimental Approaches and Protocols	196
References	204

PART III Adhesion Receptor Methodologies

9. Expression Cloning Strategies for the Identification of Adhesion Molecules	
<i>Joe W. Ramos and Mark Ginsberg</i>	
I. Introduction	209
II. Importance of Methodology	212
III. General Considerations	212
IV. Protocols	214
V. Points of Variation	218
VI. Critical Controls	219
VII. Potential Use in Disease/Drug Screening Applications	219
References	220
10. Purification of Integrins and Characterization of Integrin-Associated Proteins	
<i>Johannes A. Eble and Fedor Berditchevski</i>	
I. Introduction	224
II. Isolation of Integrins: General Considerations and Points of Variation	225
III. Characterization of Integrin-Associated Proteins through mAb Production: General Considerations and Points of Variation	234
References	241
11. Methods for Analysis of the Integrin Ligand Binding Event	
<i>Jeffrey W. Smith</i>	
I. Introduction	247
II. Application of Affinity Cross-Linking to Study of the Integrin Ligand Binding Pocket	248

III. Microtiter-Based Integrin Binding Assays	250
IV. Measuring Ligand Binding to Integrins with Surface Plasmon Resonance	254
V. Analyzing Integrin Redox Status	256
References	258

12. Intracellular Coupling of Adhesion Receptors: Molecular Proximity Measurements

Maddy Parsons and Tony Ng

I. Introduction and Applications	261
II. Fluorescent Lifetime Imaging Microscopy (FLIM)	265
References	276

PART IV Functional Applications of Cell–Matrix Adhesion in Molecular Cell Biology

13. Functional Analysis of Cell Adhesion: Quantitation of Cell–Matrix Attachment

Steven K. Akiyama

I. Introduction	281
II. General Concepts in Cell Adhesion Assays	283
III. Cell Attachment Assays	286
IV. Cell Spreading Assays	288
V. Direct Binding Assays	289
VI. Cell Migration Assays	290
VII. Conclusions	293
References	293

14. Measurements of Glycosaminoglycan-Based Cell Interactions

J. Kevin Langford and Ralph D. Sanderson

I. Introduction	297
II. Cell Adhesion Assay	299
III. Cell Invasion Assay	302
References	307

15. Applications of Adhesion Molecule Gene Knockout Cell Lines

Jordan A. Kreidberg

I. Introduction	310
II. Derivation of Somatic Cell Lines	311
III. ES Cell Lines Carrying Homozygous Mutations of Integrin Adhesion Molecule Genes	315
IV. Studies with Adhesion Receptor Null Cell Lines	317
V. Studies with Extracellular Matrix Component Null Cell Lines	321
VI. Summary	322
References	322

16. Flexible Polyacrylamide Substrata for the Analysis of Mechanical Interactions at Cell–Substratum Adhesions	
<i>Karen A. Beningo, Chun-Min Lo, and Yu-Li Wang</i>	
I. Introduction	326
II. Preparation of the Polyacrylamide Substratum	327
III. Characterization of the Gel	330
IV. Data Collection for the Analysis of Traction Forces	332
V. Analysis of Traction Forces	334
VI. Other Applications Using Polyacrylamide Substrata	336
VII. Summary	338
References	338
17. Cell Migration in Slice Cultures	
<i>Donna J. Webb, Hannelore Asmussen, Shin-ichi Murase, and Alan F. Horwitz</i>	
I. Introduction	341
II. Somitic Migration	342
III. Migration from the Subventricular Zone to the Olfactory Bulb	349
IV. Axonal Outgrowth	353
V. Conclusions and Perspectives	356
References	357
18. Application of Cell Adhesion to Study Signaling Networks	
<i>Cindy K. Miranti</i>	
I. Introduction	359
II. Applications	361
III. Methods	362
References	382
19. Use of Micropatterned Adhesive Surfaces for Control of Cell Behavior	
<i>Philip LeDuc, Emanuele Ostuni, George Whitesides, and Donald Ingber</i>	
I. Introduction	385
II. Materials and Instrumentation	392
III. Procedures	394
IV. Comments	399
V. Pitfalls	399
References	400
20. Adenoviral-Mediated Gene Transfer in Two-Dimensional and Three-Dimensional Cultures of Mammary Epithelial Cells	
<i>Harriet Watkin and Charles H. Streuli</i>	
I. Introduction	404
II. Using Collagen I as a Three-Dimensional Matrix for Cell Culture	405

III. Using Reconstituted Basement Membrane as a Three-Dimensional Matrix for Cell Culture	407
IV. Preparing Mouse Mammary Epithelial Cell Cultures	409
V. Preparing Recombinant Adenovirus for Infecting Mammary Epithelial Cells	409
VI. Infecting Mammary Epithelial Cell Cultures with Adenovirus	419
References	421

PART V General Information

Appendix A: List of Suppliers	427
Appendix B: Relevant Microarray Dataset Experiments	431
Appendix C: Web Site Resources of Interest	435
Index	441
Volumes in Series	455
