Chemistry and Physics of Macromolecules

Final Report of the Sonderforschungsbereich
“Chemie und Physik der Makromoleküle“
1969–1987

Edited by
Erhard W. Fischer, Rolf C. Schulz,
and Hans Sillescu

Sonderforschungsbereiche

Contents

1	General Introduction	1
1.1	Polymer Science in the Federal Republic of Germany	1
1.2	Objectives and Developments of the Sonderforschungsbereich 41	2
1.3	Topics and Results	4
1.3.1	Pathways to New Polymers	4
1.3.2	Kinetics, Mechanisms, and Polymer Characterization	7
1.3.3	New Methods in Polymer Physics	8
1.3.4	Conformation and Interaction of Macromolecules in Polymer Systems	8
1.3.5	Macromolecules in Motion	9
1.3.6	Cooperative Phenomena in Polymers	10
1.4	References	11
2	From Oligonuclear Phenolic Compounds to Calixarenes	13
	<i>Volker Böhmer and Hermann Kämmerer</i>	
2.1	Introduction	13
2.2	Synthesis of Structurally Uniform Oligomers	14
2.2.1	General Principles, Protective Groups	14
2.2.2	Linear Oligomers	15
2.2.3	Cyclic Oligomers, Calixarenes	16
2.2.4	Chemical Modifications	19
2.2.5	Synthetic Matrix Reactions	21
2.3	Phenolic Oligomers in the Solid State	23
2.3.1	Cyclic Oligomers	23
2.3.2	Linear Compounds	25
2.4	Reactions and Properties in Solution	26
2.4.1	Spectroscopic Studies	26
2.4.2	Acidity, pK-Values	27

2.4.3	Kinetic Studies	29
2.4.4	Complexation of Cations, Host-Guest Interactions	30
2.5	Concluding Remarks	32
2.6	References	32
3	Synthesis of Monodisperse Oligomers	39
	<i>Manfred Rothe</i>	
3.1	Introduction: Importance of Oligomers	39
3.2	Synthesis of Monodisperse Oligomers	41
3.2.1	Oligomer Formation	41
3.2.2	Principles of Oligomer Synthesis	42
3.2.3	Synthesis of Monodisperse Oligoamides, Homo- Oligopeptides, and Sequential Oligopeptides	44
3.2.3.1	Linear Oligoamides of the Nylon Type and Collagen Models	44
3.2.3.2	Cyclic Oligoamides of the Nylon Type	50
3.3	Physical Properties of Synthesized Monodisperse Oligoamides and Oligopeptides	53
3.3.1	Chain-Length Dependence of the Conformation of Linear Oligo-L-Prolines	53
3.3.2	Ring-Size Dependence of Physical Properties	56
3.4	Outlook	58
3.5	References	58
4	Telechelic Oligomers	61
	<i>Walter Heitz</i>	
4.1	Introduction	61
4.2	Telechelics by Cationic Polymerization	63
4.3	Telechelics by Anionic Polymerization	70
4.4	Telechelics by Radical Polymerization	71
4.4.1	Mechanistic Aspects	72
4.4.1.1	Elementary Steps	72
4.4.1.2	Dead End Polymerization	74
4.4.1.3	The Initiator	78
4.4.1.4	Monomers	81
4.5	Telechelics by Metal Catalyzed Reactions	90
4.6	Telechelic Hard Segments	91
4.7	References	93

5	Cyclic and Macrocyclic Compounds	97
	<i>Hartwig Höcker and Rolf C. Schulz</i>	
5.1	Introduction	97
5.2	Ring-Chain Equilibria	98
5.3	Cycloolefins and Cycloparaffins Obtained by Metathesis Polymerization of Cyclomonoolefins	98
5.4	Properties of Cycloolefins and Cycloparaffins	102
5.5	Cyclic Oligomers of Cycloacetals	104
5.6	Synthesis of Cyclophanes via Polycombination Reaction Induced by Electron Transfer to Divinylidene Compounds	107
5.7	Macrocyclic Polystyrene	109
5.8	Concluding Remarks	113
5.9	References	113
6	Kinetics of Copolymerization	115
	<i>Dietrich Braun and Wojciech K. Czerwinski</i>	
6.1	Introduction	115
6.2	Experimental Methods	116
6.3	Binary Copolymerization	117
6.3.1	Classical Rate Model	117
6.3.2	Model of Diffusion Controlled Termination	118
6.3.3	Penultimate Model	119
6.3.4	Supplementary Concepts	120
6.3.5	Experimental Results	121
6.4	Ternary Copolymerization	127
6.4.1	Classical Rate Model for Three Homopolymerizable Monomers	128
6.4.2	Model of Diffusion Controlled Termination	131
6.4.3	Experimental Results	133
6.5	Conclusions	135
6.6	References	137
7	Free Radical Polymerization: From Spontaneous Initiation up to the Glass Transition State	141
	<i>Günther Meyerhoff, Günter V. Schulz, and Jürgen Lingnau</i>	
7.1	Introduction	141
7.2	Experimental Approach	142
7.2.1	Kinetic Experiments	142
7.2.2	Identification and Kinetics of Formation of Side Products	143
7.2.3	Determination of Molecular Weight Distributions	143
7.3	Spontaneous Polymerization	148
7.3.1	The Spontaneous Polymerization of Styrene	149

Contents

7.3.2	The Spontaneous Polymerization of Methacrylates	150
7.3.2.1	General Aspects	150
7.3.2.2	The Oligomers	151
7.3.2.3	Solvent Effects	153
7.3.2.4	Other Acrylates	155
7.3.2.5	“Chemical Simulation”	155
7.3.2.6	The Mechanism and its Formal Description	157
7.4	Kinetics for Medium and High Conversions	159
7.4.1	Kinetics of the Initiated Polymerization below the Onset of the Gel Effect	159
7.4.2	Kinetics of the Initiated Polymerization beyond the Onset of the Gel Effect up to the Glass Transition Point	160
7.4.3	Results of the Polymerization Experiments	161
7.4.4	Rate Constants and Diffusion Mechanisms	164
7.4.5	Chain Length and Conversion	165
7.5	Conclusion	166
7.6	References	166
8	Kinetics and Mechanisms of Anionic and Group Transfer Polymerization	171
	<i>Axel H. E. Müller, Hartwig Höcker, and Günter V. Schulz</i>	
8.1	Introduction	171
8.2	Polymerization of Styrene	173
8.2.1	Ions and Ion Pairs	173
8.2.2	Contact and Solvent-Separated Ion Pairs	176
8.3	Polymerization of Acrylic Monomers	179
8.3.1	Potential Problems	179
8.3.2	Methyl Methacrylate	181
8.3.3	Other Methacrylates	191
8.3.3.1	Homopolymerization	191
8.3.3.2	Copolymerization	192
8.3.4	Polymerization in Non-Polar Solvents	194
8.4	Group Transfer Polymerization of Methacrylates	196
8.4.1	Introduction	196
8.4.2	General Considerations	197
8.4.3	Kinetic Investigations	199
8.4.4	Control of Molecular Weight Distribution	202
8.5	References	204

9	Molecular Engineering of Liquid Crystalline Polymers . . . 211
	<i>Helmut Ringsdorf, Ingrid Voigt-Martin, Joachim Wendorff, Renate Wüstefeld, and Rudolf Zentel</i>
9.1	Introduction: Self Organizing Systems 211
9.2	Molecular Architecture of Liquid Crystalline Polymers . . . 212
9.2.1	Liquid Crystalline Polymers with Rod-like Mesogens . . . 218
9.2.1.1	Synthesis and Structure-Property Relations of LC Side Group Polymers 218
9.2.1.2	Synthesis and Structure-Property Relationships of Main Chain Polymers 224
9.2.1.3	Molecular Engineering of LC-Polymers: Side Group and Main Chain LC Systems 224
9.2.2	Liquid Crystalline Polymers with Disc-like Mesogens . . . 228
9.2.2.1	Polymers with Discotic Phases 231
9.2.2.2	Polymers with Sanidic Phases 233
9.2.3	Functionalized Liquid Crystalline Polymers 237
9.2.3.1	Dye Containing Polymers 237
9.2.3.2	Photosensitive Liquid Crystalline Polymers 238
9.2.3.3	Liquid Crystalline Elastomers 242
9.3	Molecular Architecture and Physical Properties 247
9.3.1	The Amorphous, Crystalline and Liquid Crystalline State of Matter 247
9.3.2	Fluctuations in Liquid Crystalline Polymers 248
9.3.2.1	Defining Fluctuations 248
9.3.2.2	Kerr Relaxation Studies on Orientational Fluctuations . . . 249
9.3.2.3	Small Angle X-Ray Scattering Studies on Orientational Correlations in Side Group Polymers 252
9.3.3	High Resolution Electronmicroscopy as a Tool for Visualizing Smectic Structures 253
9.3.3.1	Introduction 253
9.3.3.2	Sample Preparation 254
9.3.3.3	Structural Information Obtained by Electron Microscopy . . . 254
9.3.3.4	Image Analysis and Processing 260
9.3.3.5	Conclusion 262
9.4	References 262
10	Thermodynamics and Rheology of Polymer Solutions . . . 273
	<i>Bernhard A. Wolf</i>
10.1	Pressure, the Neglected Variable 274
10.1.1	Thermodynamics 274
10.1.1.1	Pressure Dependence of Polymer Solubility 274
10.1.1.2	Pressure Dependence of Interaction Parameters 276
10.1.2	Viscometry 277

Contents

10.1.2.1	Intrinsic Viscosities	277
10.1.2.2	Activation Volumes	278
10.2	On the Role of Chain Length	279
10.2.1	Development of Incompatibility	280
10.2.1.1	Experiments with Oligomers	280
10.2.1.2	Solubility Parameter Theory	280
10.2.2	Molecular Weight Dependence of Pair Interactions	282
10.2.2.1	Theoretical Concept	282
10.2.2.2	Experimental Results and Discussion	283
10.3	Interrelation of Thermodynamic and Rheological Properties	286
10.3.1	Flow under Different Thermodynamic Conditions	286
10.3.1.1	The Pull-along Effect	286
10.3.1.2	Thermoreversible Gelation	287
10.3.2	Phase Separation of Flowing Polymer Solutions	289
10.3.2.1	Experimental Results	289
10.3.2.2	Theory and Discussion	289
10.4	Outlook	292
10.5	References	293

11 Polymer Diffusion as Studied by Holographic Grating Techniques 295

Hans Sillescu

11.1	Introduction	295
11.2	Physical Principles and Experimental Aspects	296
11.2.1	Hologram Formation	296
11.2.2	Hologram Reading by Forced Rayleigh Scattering	297
11.2.3	Analysis of Diffusion Experiments	299
11.2.4	Photo-Labeling and Sample Preparation	300
11.3	Applications	302
11.3.1	Diffusion of Polymer Chains by Reptation and other Transport Mechanisms	302
11.3.2	Diffusion of Polymer Rings, Microgels, and Stars	305
11.3.3	Diffusion of Monomer Dyes at the Glass Transition of Amorphous Polymers	307
11.4	References	310

12 Deuteron NMR. A New Tool for Investigating Order and Dynamics in Polymers 313

Hans Wolfgang Spiess and Hans Sillescu

12.1	Introduction	313
12.2	Techniques	314
12.2.1	Dynamics	314

12.2.1.1	Slow Motion and Solid Echo Spectra	314
12.2.1.2	Spin-Alignment	319
12.2.1.3	Spin Lattice Relaxation	320
12.2.1.4	Distribution of Correlation Times	321
12.2.2	Order	322
12.2.2.1	Orientalional Distribution	322
12.2.2.2	Expansion in Terms of Spherical Functions	324
12.2.2.3	¹³ C-MAS-NMR	326
12.3	Experimental Examples	329
12.3.1	Dynamics	329
12.3.1.1	Chain Motion in Linear Polyethylene	329
12.3.1.2	Molecular Motion and Mechanical Properties of Polycarbonate	330
12.3.1.3	Molecular Motion in Interfacial Regions of Segmented Polyurethanes	332
12.3.1.4	Motion of Mesogens in Liquid Crystalline Polymers	333
12.3.1.5	Mobility of Lipid Chains in Polymer Model Membranes	335
12.3.2	Order	337
12.3.2.1	Molecular Order in Liquid Crystalline Polymers	337
12.3.2.2	Drawn Fibres of Poly(ethyleneterephthalate) (PET)	339
12.3.3	Overview of the ² H-NMR in Polymers	341
12.4	New Developments: Two-dimensional ² H-NMR	341
12.5	References	344
13	The Kerr Effect as Applied to the Investigation of Polymers 349	
	<i>Bernd-J. Jungnickel and Joachim H. Wendorff</i>	
13.1	Introduction	349
13.2	Fundamentals	350
13.2.1	Experimental Setup and Procedure	350
13.2.2	Basic Theoretical Relations	352
13.2.3	Information Content of the Effect	356
13.3	Glassy-Amorphous Polymers	357
13.3.1	Theoretical Considerations	358
13.3.2	Experimental Investigations and Results	361
13.3.3	Discussion	364
13.4	Liquid Crystalline Polymers	365
13.4.1	Introduction: Pretransitional Effects	365
13.4.2	Kerr Effect and Order Parameter Fluctuations	366
13.4.2.1	Static Properties	366
13.4.2.2	Dynamical Properties	367
13.4.3	Kerr Effect Studies on Liquid Crystalline Side Chain Polymers	368
13.5	References	374

14	Concentration Fluctuations and Kinetics of Phase Separation in Polymer Blends	377
	<i>Gert Strobl</i>	
14.1	Introduction	377
14.2	Theory	378
14.2.1	Phase Behaviour of Polymer Blends	378
14.2.2	Concentration Fluctuations in Thermal Equilibrium	381
14.2.3	Kinetics of Unmixing	382
14.3	Small Angle X-Ray Scattering Studies	385
14.3.1	Polystyrene/Poly(styrene-co-bromostyrene) Blends	385
14.3.2	Static Structure Factors	386
14.3.3	Relaxation after T-Jumps within the One-Phase Region	389
14.3.4	Kinetics of Spinodal Decomposition	393
14.4	References	395
15	Collective Dynamics in Polymeric Liquids as Measured by Quasi-elastic Light- and Neutron Scattering	397
