

About Face 2.0

The Essentials of Interaction Design

Alan Cooper and Robert Reimann

WILEY

Wiley Publishing, Inc.

Contents

Foreword	ix
Acknowledgments	viii
Introduction	xxvii

Section One Know Thy User

Part I Bridging the Gap

Chapter 1	Goal-Directed Design	5
	Digital Products Need Better Design Methods	5
	The design of digital products today	5
	We're ignorant about users	8
	We have a conflict of interest	8
	We lack a process	8
	The Evolution of Design in Manufacturing	9
	Planning and Designing Behavior	11
	Recognizing User Goals	11
	Goals versus tasks	12
	Designing to meet goals in context	13
	The Goal-Directed Design Process	13
	Bridging the gap	14
	A process overview	16
	Goals, not features, are the key to product success	19
Chapter 2	Implementation Models and Mental Models	21
	Implementation Models	21
	User Mental Models	21
	Represented Models	22
	Most Software Conforms to Implementation Models	25
	Software designed by engineers follows the <i>implementation model</i>	25
	Mathematical thinking leads to implementation model interfaces	26
	Mechanical-Age versus Information-Age Represented Models	27
	Mechanical-age representations	27
	New technology demands new representations	28
	Mechanical-age representations degrade user interaction	28
	Improving on mechanical-age representations: an example	29

Chapter 3	Beginners, Experts, and Intermediates	33
	Perpetual Intermediates	33
	Optimizing for Intermediates	34
	What beginners need	35
	Getting beginners on board	36
	What experts need	37
	What perpetual intermediates need	37
Chapter 4	Understanding Users: Qualitative Research	39
	Qualitative versus Quantitative Research	39
	The value of qualitative research	40
	Types of qualitative research	40
	Ethnographic Interviews: Interviewing and	
	Observing Users	44
	Contextual Inquiry	44
	Improving on Contextual Inquiry	45
	Preparing for ethnographic interviews	46
	Conducting ethnographic interviews	48
	Other Types of Research	52
	Focus groups	52
	Market demographics and market segments	53
	Usability and user testing	53
Chapter 5	Modeling Users: Personas and Goals	55
	Why Model?	55
	Personas	56
	Strengths of personas as a design tool	56
	Personas are based on research	58
	Personas are represented as individuals	59
	Personas represent classes of users in context	59
	Personas explore ranges of behavior	60
	Personas must have motivations	60
	Personas versus user roles	61
	Personas versus user profiles	61
	Personas versus market segments	62
	User personas versus non-user personas	62
	Goals	62
	Goals motivate usage patterns	62
	Goals must be inferred from qualitative data	63
	Types of goals	63
	Successful products meet user goals first	66
	Constructing Personas	67
	Revisit the persona hypothesis	68
	Map interview subjects to behavioral variables	68
	Identify significant behavior patterns	68
	Synthesize characteristics and relevant goals	69

	Check for completeness and distinctiveness	70
	Develop narratives	71
	Designate persona types	71
Chapter 6	Other Models	73
	Scenarios: Translating Goals into Design	75
	Narrative as a Design Tool	75
	Scenarios in design	75
	Using personas in scenarios	76
	Persona-based scenarios versus use cases	77
	Envisioning Solutions with Persona-Based Design	77
	Defining the requirements	78
	<i>Defining the interaction framework</i>	83
	Refining the form and behavior	88
Chapter 7	Synthesizing Good Design: Principles and Patterns ...	91
	Interaction Design Principles	91
	Principles minimize work	91
	Principles operate at different levels of detail	92
	Principles versus style guides	92
	Interaction Design Patterns	93
	Interaction and architectural patterns	93
	Types of interaction design patterns	93
	Structural patterns, pattern nesting, and pre-fab design	95
	Interaction Design Imperatives	95
	Ethical interaction design	95
	Purposeful interaction design	97
	Pragmatic interaction design	97
	Elegant interaction design	97

Section Two Designing Behavior and Form

Part II Achieving Goals and Removing Barriers

Chapter 8	Software Posture	103
	Postures for the Desktop	103
	Sovereign posture	103
	Transient posture	108
	Daemonic posture	111
	Auxiliary posture	113
	Postures for the Web	114
	Information-oriented sites	114
	Transactional sites and Web applications	115
	Web portals	116

	Postures for Other Platforms	117
	Kiosks	117
	Handheld devices	117
	Appliances	118
Chapter 9	Orchestration and Flow	119
	Flow and Transparency	119
	Follow mental models	120
	Direct, don't discuss	120
	Keep tools close at hand	121
	Modeless feedback	122
	Orchestration	123
	Adding finesse: Less is more	123
	Distinguishing possibility from probability	124
	Providing comparisons	126
	Using graphical input	127
	Reflecting program status	128
	Avoiding unnecessary reporting	129
	Avoiding blank slates	130
	Command invocation versus configuration	130
	Asking questions versus providing choices	131
	Hiding ejector seat levers	133
Chapter 10	Eliminating Excise	135
	What Is Excise?	135
	GUI Excise	136
	Excise and expert users	136
	Training wheels	137
	“Pure” excise	137
	Visual excise	137
	Determining what is excise	138
	Stopping the Proceedings	138
	Errors, notifiers, and confirmation messages	139
	Making the user ask permission	140
	Protecting us from ourselves	141
	Unresponsiveness	142
	Common Excise Traps	142
Chapter 11	Navigation and Inflection	143
	Navigation Is Excise	143
	Types of Navigation	143
	Navigation between multiple windows or pages	144
	Navigation between panes	144
	Navigation between tools and menus	145
	Navigation of information	146
	Improving Navigation	148
	Reduce the number of places to go	148
	Provide signposts	149

	Provide overviews	150
	Provide appropriate mapping of controls to functions	152
	Inflect your interface to match user needs	154
	Avoid hierarchies	156
Chapter 12	Understanding Undo	157
	Users and Undo	157
	User mental models of mistakes	157
	Undo enables exploration	158
	Designing an Undo Facility	158
	Types and Variants of Undo	159
	Incremental and procedural actions	159
	Blind and explanatory undo	159
	Single and multiple undo	160
	Redo	162
	Group multiple undo	162
	Other Models for Undo-Like Behavior	163
	Comparison: What would this look like?	163
	Category-specific undo	163
	Deleted data buffers	164
	Milestoning and reversion	165
	Freezing	166
	Undo-Proof Operations	166
Chapter 13	Rethinking Files and Save	167
	What's Wrong with Saving Changes to Files?	167
	Problems with the Implementation Model	168
	Closing and unwanted changes	169
	Save As	169
	Archiving	171
	Implementation Model versus Mental Model	171
	Dispensing with the Implementation Model of the File System	172
	Designing a Unified File Presentation Model	173
	Unified Document Management	173
	Automatically saving the document	174
	Creating a copy of the document	175
	Naming and renaming the document	175
	Placing and moving the document	175
	Specifying the stored format of the document	175
	Reversing changes	176
	Abandoning all changes	176
	Creating a milestone copy of the document	176
	A new File menu	176
	A new name for the File menu	177
	Are Disks and Files Systems a Feature?	178
	Time for Change	179

Part III Providing Power and Pleasure

Chapter 14	Making Software Considerate	183
	Designing Considerate Software	183
	What Makes Software Considerate?	184
	Considerate software takes an interest	184
	Considerate software is deferential	185
	Considerate software is forthcoming	185
	Considerate software uses common sense	185
	Considerate software anticipates needs	185
	Considerate software is conscientious	186
	Considerate software doesn't burden you with its personal problems	186
	Considerate software keeps us informed	187
	Considerate software is perceptive	187
	Considerate software is self-confident	187
	Considerate software doesn't ask a lot of questions	188
	Considerate software fails gracefully	188
	Considerate software knows when to bend the rules	189
	Considerate software takes responsibility	190
	Considerate Software Is Possible	190
Chapter 15	Making Software Smart	191
	Putting the Idle Cycles to Work	191
	Wasted cycles	192
	Putting the cycles to better use	192
	Giving Software a Memory	192
	Task Coherence	193
	Remembering choices and defaults	193
	Remembering patterns	194
	Actions to Remember	195
	File locations	195
	Deduced information	195
	Multi-session undo	195
	Past data entries	195
	Foreign application activities on program files	196
	Applying Memory to Your Applications	196
	Decision-set reduction	196
	Preference thresholds	197
	Mostly right, most of the time	198
	Memory Makes a Difference	198
Chapter 16	Improving Data Retrieval	199
	Storage and Retrieval Systems	199
	Storage and Retrieval in the Physical World	199
	Everything in its place: Storage and retrieval by location	199
	Indexed retrieval	200

	Storage and Retrieval in the Digital World	200
	Retrieval methods	201
	An attribute-based retrieval system	201
	Relational Databases versus Digital Soup	203
	Organizing the unorganizable	203
	Problems with databases	203
	The attribute-based alternative	204
	Natural Language Output: An Ideal Interface for	
	Attribute-Based Retrieval	205
Chapter 17	Improving Data Entry	207
	Data Integrity versus Data Immunity	207
	Data immunity	208
	What about lost data?	209
	Data entry and fudgeability	210
	Auditing versus Editing	211
Chapter 18	Designing for Different Needs	215
	Command Vectors and Working Sets	215
	Immediate and pedagogic vectors	215
	Working sets and personas	216
	Graduating Users from Beginners to Intermediates	216
	World vectors and head vectors	217
	Memorization vectors	217
	Personalization and Configuration	218
	Idiosyncratically Modal Behavior	219
	Localization and Globalization	220
	Galleries and Templates	221
Part IV	Applying Visual Design Principles	
Chapter 19	Designing Look and Feel	225
	Visual Art versus Visual Design	225
	Graphic Design and Visual Interface Design	225
	Graphic design and user interfaces	226
	Visual interface design and visual information design	226
	Industrial design	226
	Principles of Visual Interface Design	227
	Avoid visual noise and clutter	227
	Use contrast and layering to distinguish and	
	organize elements	228
	Provide visual structure and flow at each level	
	of organization	230
	Use cohesive, consistent, and contextually appropriate	
	imagery	234
	Integrate style and function comprehensively	
	and purposefully	236

	Principles of Visual Information Design	237
	Enforce visual comparisons	238
	Show causality	238
	Show multiple variables	239
	Integrate text, graphics, and data in one display	239
	Ensure the quality, relevance, and integrity of the content	239
	Show things adjacently in space, not stacked in time	240
	Don't de-quantify quantifiable data	240
	Use of Text and Color in Visual Interfaces	241
	Use of text	241
	Use of color	242
	Misuse of color	243
	Consistency and Standards	243
	Benefits of interface standards	244
	Risks of interface standards	244
	Standards, guidelines, and rules of thumb	244
	When to violate guidelines	245
	Consistency and standards across applications	245
Chapter 20	Metaphors, Idioms, and Affordances	247
	Interface Paradigms	247
	Implementation-centric interfaces	247
	Metaphoric interfaces	248
	Idiomatic interfaces	250
	Further Limitations of Metaphors	252
	Finding good metaphors	252
	The problems with global metaphors	252
	Macs and metaphors: A revisionist view	254
	Building Idioms	255
	Manual Affordances	256
	Semantics of manual affordances	257
	Fulfilling user expectations of affordances	258

Section Three Interaction Details

Part V Mice and Manipulation

Chapter 21	Direct Manipulation and Pointing Devices	263
	Direct Manipulation	263
	Program manipulation versus content manipulation	264
	Three phases of the direct manipulation process	265
	Visual feedback for direct manipulation idioms	265
	Direct manipulation is critical to effective interaction	265
	Pointing Devices	266
	Light Pens and CRTs	266
	Mice and indirect manipulation	267

	Other pointing devices	267
	The return of the pen?	269
	Using the Mouse	269
	How many mouse buttons?	271
	The left mouse button	272
	The right mouse button	272
	The middle mouse button	272
	Pointing and clicking with a mouse	273
	Up and down events	275
	The cursor	276
	Pliancy and hinting	276
	Input focus	279
	Meta-keys	280
Chapter 22	Selection	281
	Object-Verb Ordering and Selection	281
	Discrete and Contiguous Selection	282
	Mutual Exclusion	283
	Additive Selection	283
	Insertion and Replacement	284
	Group Selection	285
	Visual Indication of Selection	286
	Inversion	286
	Selecting multicolor objects	287
Chapter 23	Drag and Drop	289
	Defining Drag-and-Drop	289
	Interior and Exterior Drag-and-Drop	289
	The Source-and-Target Paradigm	290
	Dragging data objects to target functions	290
	Dragging function objects to target data	291
	Source-and-Target Interactions	291
	Visual feedback while dragging	292
	Completing the drag-and-drop operation	294
	Insertion targets	294
	Visual feedback at completion	294
	Other Drag-and-Drop Interaction Issues	295
	Auto-scrolling	295
	Avoiding drag-and-drop twitchiness	297
	Mouse vernier	299
Chapter 24	Manipulating Controls, Objects, and Connections	303
	Control Manipulation	303
	Click-and-drag	303
	Escaping from capture	304
	Pliant response	305
	Click-and-drag controls	306
	Palette tool behaviors	306

Object Manipulation	308
Repositioning	309
Resizing and reshaping	309
Resizing and reshaping meta-key variants	311
3D object manipulation	312
Object Connection	316

Part VI **Controls and Their Behaviors**

Chapter 25	Window Behaviors	321
	PARC and the Alto	321
	PARC's Principles	322
	Visual metaphors	322
	Avoiding modes	322
	Overlapping windows	323
	Microsoft and Tiled Windows	324
	Full-Screen Applications	324
	Multipaned Applications	325
	Choosing Your Windows	326
	Unnecessary rooms	326
	Necessary rooms	328
	Windows pollution	329
	Window States	331
	Why minimize?	331
	Why pluralize?	333
	MDI versus SDI	334
Chapter 26	Using Controls	337
	Avoiding Control-Laden Dialog Boxes	337
	Imperative Controls	338
	Push-buttons	338
	Butcons	339
	Selection Controls	340
	Check boxes	340
	Flip-flop buttons: A selection idiom to avoid	341
	Radio buttons	342
	Combutcons	343
	List controls	345
	Comboboxes	350
	Tree controls	351
	Entry Controls	351
	Bounded and unbounded entry controls	352
	Spinners	353
	Unbounded entry: Text edit controls	354
	Display Controls	359
	Text controls	359
	Those darned scrollbars	360

	Sliders and dials	361
	Thumbwheels	361
	Splitters	361
	Drawers and levers	362
Chapter 27	Menus: The Pedagogic Vector	363
	The Command-Line interface	363
	Sequential Hierarchical Menus	364
	The Lotus 1-2-3 Interface	365
	Drop-Down and Pop-Up Menus	366
	Menu Today: The Pedagogic Vector	367
Chapter 28	Using Menus	371
	Standard Menus	371
	The File menu	372
	The Edit menu	372
	The Windows menu	373
	The Help menu	373
	Optional Menus	373
	The View menu	373
	The Insert menu	373
	The Settings menu	373
	The Format menu	373
	The Tools menu	374
	Problematic Menu Idioms	374
	Cascading Menus	374
	Expanding Menus	375
	Bang Menus	376
	Menu Item Conventions and Variants	376
	Disabling menu items	376
	Checkmark menu items	377
	Flip-flop menu items	377
	Icons on menus	377
	Accelerators	378
	Mnemonics	379
	The Windows System Menu	380
Chapter 29	Using Toolbars and ToolTips	381
	Toolbars: Visible, Immediate Functionality	381
	Toolbars are not menus	381
	Toolbars freed menus to teach	382
	Toolbars and Toolbar Controls	382
	Icons versus text on toolbars	382
	The problem with labeling butcons	383
	Explaining Toolbar Controls	383
	Balloon help: A first attempt	384
	ToolTips	384
	Disabling toolbar controls	386

	Evolution of the Toolbar	386
	State-indicating toolbar controls	387
	Menus on toolbars	387
	Movable toolbars	387
	Customizable toolbars	389
	The Windows Taskbar: Special Purpose Toolbars	389
	The Start menu	390
	Quick Start toolbar	390
	Window buttons	390
	The status area	391
	More toolbars on the Taskbar?	391
Chapter 30	Using Dialogs	393
	Dialogs Suspend Normal Interaction	393
	Dialog Box Basics	394
	Modal dialog boxes	395
	Modeless dialog boxes	396
	Modeless dialog issues	396
	Two solutions for better modeless dialogs	397
	Goal-Directed Dialog Boxes	401
	Property dialog boxes	401
	Function dialog boxes	402
	Process dialog boxes	404
	Eliminating process dialogs	406
	Bulletin dialog boxes	406
Chapter 31	Dialog Etiquette	409
	Politeness as a Dialog Virtue	409
	The Title Bar	409
	Transient Posture	410
	Reduce Excise	412
	Know where you are needed	412
	Know if you are needed	413
	Terminating Commands for Modal Dialogs	413
	The Close box	415
	The Help button	415
	Keyboard Shortcuts	415
	Tabbed Dialogs	417
	Breadth versus depth	418
	Stacked tabs: Dialog abuse	418
	Expanding Dialogs	420
	Cascading Dialogs	421
	Dynamic Dialogs	422
Chapter 32	Creating Better Controls	425
	Direct Manipulation Controls	425
	Example 1: Draggable drop shadows	425
	Example 2: Specifying grids	426
	Extraction Controls	426
	Visual Controls	429

Part VII Communicating with Users

Chapter 33	Eliminating Errors	435
	Errors Are Abused	435
	Why We Have So Many Error Messages	435
	What's Wrong with Error Messages	436
	People hate error messages	436
	Whose mistake is it, anyway?	437
	Error messages don't work	439
	Eliminating Error Messages	439
	Making errors impossible	440
	Positive feedback	441
	Aren't There Exceptions?	442
	Improving Error Messages: The Last Resort	443
	The End of Errors	444
Chapter 34	Notifying and Confirming	445
	Alerts and Confirmations	445
	Alerts: Announcing the obvious	445
	Confirmations	447
	Replacing Dialogs: Rich Modeless Feedback	451
	Rich visual modeless feedback	451
	Audible feedback	453
Chapter 35	Other Communication with Users	457
	Your Identity on the Desktop	457
	Your program's name	457
	Your program's icon	458
	Ancillary Application Windows	458
	About boxes	458
	Splash screens	461
	Shareware splash screens	461
	Online help	462
	The index	462
	Shortcuts and overview	462
	Not for beginners	463
	Modeless and interactive help	463
	Wizards	463
	"Intelligent" agents	464
Chapter 36	The Installation Process	465
	The Best Installation Is No Installation	465
	One Damned Thing after Another	466
	Demanding responses without informing you of	
	the consequences	467
	Not informing you of the scope of your actions	468
	Asking you questions to which you are unlikely	
	to know the answer	469
	Asking you for answers it can determine for itself	470

Not doing its homework	470
Not providing a means for uninstallation	470
Ignoring evidence of its previous activity	472
Abusing system-wide files	472
Putting files where they don't belong	472
Overwriting shared files	473
Not offering you any information about the program	473
Confusing installation with configuration	473
Demanding your active participation	474

Part VIII Designing Beyond the Desktop

Chapter 37	Designing for the Web	477
	The Good News and the Bad News	477
	Common Myths about Web Design	478
	Web Sites versus Web Applications	481
	Web sites	481
	Web applications	481
Chapter 38	Designing for Embedded Systems	489
	General Design Principles	489
	Don't think of your product as a computer	490
	Integrate your hardware and software design	490
	Context drives the design	491
	Use modes judiciously	492
	Limit the scope	493
	Balance navigation with display density	493
	Minimize input complexity	494
	Customize for your platform	494
	Designing for Handhelds	494
	Designing for Kiosks	497
	Kiosk posture and navigation	497
	Transaction versus exploration	497
	Interaction in a public environment	498
	Managing input	498
	Designing for Audible Interfaces	499
	Afterword: Dealing with the Inmates	501
	Appendix A: Axioms	507
	Appendix B: Design Tips	511
	Appendix C: Bibliography	515
	Index	519
