1 Introduction	1
References	8
Appendix: Units of magnetic properties	9
2 Magnetic Gibbs free energy	11
2.1 Introductory remarks	11
2.2 Magnetic energy terms	13
2.2.1 Exchange energy	14
2.2.1.1 Short-range exchange interactions	14
2.2.1.2 Long-range exchange interactions	17
2.2.2 Magnetocrystalline anisotropy energy	20
2.2.3 Magnetostatic energies	25
2.2.4 Elastic potential of a ferromagnet	28
2.2.4.1 Strain tensor in ferromagnetic materials	28
2.2.4.2 Determination of strain tensors	28
2.2.4.3 Derivation of the magnetoelastic potential	31
2.3 Summary	35
References	37
3 Basic micromagnetic equilibrium conditions	40
3.1 Static micromagnetic equations	40
3.2 Micromagnetic equations in polar coordinates	44
3.3 Micromagnetic equations in terms of swirls and magnetic charges	44
3.4 Linearized micromagnetic equations	45
References	50
4 Domain walls in crystalline and amorphous solids	51
4.1 General remarks	51
4.2 Bloch walls	51

4.3	Effect of magnetostrictive deformations	55
4.4	Effect of internal stresses	57
4.5	Bloch walls in cubic crystals	57
4.6	Néel walls in bulk materials and thin films	64
4.6.1	General remarks	64
4.6.2	Néel walls in bulk crystals	65
4.6.3	Néel walls in thin films	66
4.6.4	Phase diagrams of Néel and Bloch walls in thin films	69
	References	70
5	Interaction of domain walls with defects	71
5.1	Introductory remarks	71
5.2	Interaction energy of domain walls with point defects	71
5.3	180°-wall in amorphous alloys with uniaxial anisotropy	74
5.4	180°-wall in α -Fe	75
5.5	Interaction forces of domain walls with point defects	75
5.6	Interaction of Bloch walls with dislocations	75
5.6.1	Straight dislocation lines	77
5.6.1.1	Dislocations of length l parallel to the domain wall plane (x, y)	78
5.6.1.2	Dislocations intersecting the domain walls	79
5.6.2	Straight dislocation dipoles	80
5.6.3	Dislocation loops	81
5.7	Interaction of domain walls with planar defects	81
5.7.1	Pinning by thin planar defects	81
5.7.2	Pinning by extended planar defects	85
5.7.3	Pinning by phase boundaries	86
	References	88
