| <b>Editor</b>  | <b>xi</b>    |
| <b>Authors</b>   | <b>xiii</b>  |
| <b>Abbreviations</b>   | <b>xix</b>   |
| <b>Introductory statements</b>   | <b>xxiii</b> |
| <b>Introduction</b>  | <b>xxvii</b> |
| <b>1 Fundamentals of MEMS packaging</b>                                | <b>1</b>     |
| <i>T.R. Hsu and J.S. Custer</i>  |              |
| 1.1 Chapter Scope  | 1            |
| 1.2 MEMS and Microsystems  | 1            |
| 1.2.1 Commercially available MEMS                                      | 2            |
| 1.2.2 Commercially available microsystems                              | 2            |
| 1.3 Microsystems – a Solution to a Growing<br>Trend of Miniaturisation | 3            |
| 1.4 MEMS Packaging – a Major Challenge to<br>Microsystems Industries   | 4            |
| 1.5 Microsystems and Microelectronics Packaging                        | 6            |
| 1.6 Critical Issues in Microsystems Packaging                          | 6            |
| 1.6.1 Interface  | 7            |
| 1.6.2 Tolerances in packaging and assembly                             | 9            |
| 1.6.3 Reliable tools for pick-n-place                                  | 12           |
| 1.6.4 Testing and evaluation   | 13           |
| 1.7 Enabling Packaging Technologies                                    | 13           |
| 1.7.1 Wafer dicing   | 13           |
| 1.7.2 Bonding techniques   | 14           |
| 1.7.3 Sealing  | 15           |
| 1.8 Packaging Design and Process Flow                                  | 15           |
| 1.9 Packaging Materials  | 17           |
| 1.10 Lifetime and Reliability of Microsystems<br>Packaging             | 18           |
| 1.11 Systems Approach in MEMS Packaging                                | 19           |
| 1.12 Summary   | 20           |

|          |   |           |
|----------|---|-----------|
| <b>2</b> | <b>Joining and bonding technologies</b>                   |           |
|          | <i>T.R. Hsu and J. Clatterbaugh</i>                       |           |
| 2.1      | Chapter Scope   | 23        |
| 2.2      | Overview of Bonding in MEMS and<br>Microsystems Packaging | 23        |
| 2.3      | Surface Bonding by Adhesion                               | 25        |
|          | 2.3.1 Desirable quality of adhesives                      | 25        |
|          | 2.3.2 Typical commercial adhesives                        | 26        |
|          | 2.3.3 Micro dispensers for adhesives                      | 26        |
|          | 2.3.4 Process control and troubleshooting                 | 27        |
| 2.4      | Eutectic Bonding  | 28        |
| 2.5      | Anodic Bonding  | 29        |
|          | 2.5.1 Anodic bonding of glass-to-silicon<br>wafers        | 29        |
|          | 2.5.2 Anodic bonding of glass-to-glass<br>wafers          | 31        |
|          | 2.5.3 Anodic bonding of silicon-to-silicon<br>wafers      | 32        |
|          | 2.5.4 Design considerations in anodic bonding             | 33        |
|          | 2.5.5 A case illustration                                 | 35        |
| 2.6      | Silicon Fusion Bonding                                    | 37        |
|          | 2.6.1 SFB by hydration                                    | 38        |
|          | 2.6.2 SFB by hydrophilic                                  | 39        |
|          | 2.6.3 Annealing in SFB                                    | 39        |
|          | 2.6.4 Application of SFB                                  | 39        |
| 2.7      | Wire Bonding  | 40        |
| 2.8      | Process Troubleshooting – Issues and<br>Resolution        | 41        |
|          | 2.8.1 Eutectic die bond/solder bond                       | 41        |
|          | 2.8.2 Epoxy bond  | 44        |
|          | 2.8.3 Wire interconnects                                  | 46        |
|          | 2.8.4 Flip chip   | 56        |
|          | 2.8.5 Case studies  | 56        |
| <b>3</b> | <b>Sealing technologies</b>                               | <b>61</b> |
|          | <i>M. Chiao and L. Lin</i>                                |           |
| 3.1      | Chapter Scope   | 61        |
| 3.2      | Introduction  | 61        |
| 3.3      | Integrated Encapsulation Processes                        | 62        |
| 3.4      | Wafer Bonding Processes for Sealing                       | 65        |
|          | 3.4.1 Direct wafer bonding processes                      | 66        |
|          | 3.4.2 Wafer bonding with intermediate layers              | 67        |
| 3.5      | Vacuum Encapsulation Processes                            | 70        |
| 3.6      | Reliability and Accelerated Testing                       | 73        |
| 3.7      | Summary and Future Trends                                 | 79        |

## Contents

|                      |   |            |
|----------------------|---|------------|
| 9.3.2                | Unusual/extreme environments in aerospace systems                   | 217        |
| 9.4                  | Packaging in Aerospace Systems                                      | 218        |
| 9.4.1                | Packaging hierarchy   | 218        |
| 9.4.2                | Advanced packaging for aerospace systems                            | 219        |
| 9.4.2.1              | Monolithic systems on a chip  | 219        |
| 9.4.2.2              | Hybrid systems in package   | 220        |
| 9.4.2.3              | Element attach methods  | 220        |
| 9.4.3                | Packaging's research frontier in aerospace                          | 220        |
| 9.4.4                | Packaging MEMS devices  | 222        |
| 9.4.4.1              | Functions of packaging  | 225        |
| 9.4.4.2              | MEMS co-integration   | 226        |
| 9.4.4.3              | Overcoming limitations of traditional packaging                     | 228        |
| 9.4.4.4              | Special packaging methods for MEMS devices                          | 229        |
| 9.5                  | Reliability and Qualification                                       | 231        |
| 9.5.1                | Design concerns for 'high-consequence' systems                      | 231        |
| 9.5.2                | Strategies for reliability and qualification                        | 233        |
| 9.6                  | The Case for MEMS Switches as a Game-Changing Aerospace Application | 234        |
| 9.6.1                | Power applications  | 236        |
| 9.6.2                | Microwave applications  | 237        |
| 9.6.3                | Analogue applications   | 238        |
| 9.6.4                | Digital applications  | 238        |
| 9.6.5                | Adaptive manifold   | 239        |
| 9.7                  | MEMS-Driven Improvements in Packaging                               | 240        |
| 9.7.1                | Thermal management  | 240        |
| 9.7.2                | Connectors and micro-sockets  | 241        |
| 9.7.3                | Improving precision   | 242        |
| 9.8                  | Revisiting Systems Engineering for Aerospace Systems                | 243        |
| 9.8.1                | Design principles   | 243        |
| 9.8.2                | Challenges/opportunities  | 245        |
| 9.8.2.1              | Safety/lethality reduction  | 245        |
| 9.8.2.2              | Reconfigurable systems  | 245        |
