# Table of contents

<b>Preface</b> . . . . .	11
<b>Acknowledgements</b> . . . . .	13
<b>List of abbreviations</b> . . . . .	15
<b>1. Scope and limitations</b> . . . . .	19
<b>2. Principles of molecular photochemistry</b> . . . . .	25
2.1 Introduction . . . . .	25
2.2 The nature of light . . . . .	25
2.3 Potential energy surfaces . . . . .	26
2.4 Electronic states and electronic configurations . . . . .	30
2.5 Light absorption . . . . .	34
2.6 Unimolecular processes of excited states . . . . .	37
2.6.1 Vibrational relaxation . . . . .	37
2.6.2 Radiative deactivation . . . . .	38
2.6.3 Radiationless deactivation . . . . .	38
2.6.4 Chemical reaction . . . . .	40
2.6.5 Kinetic aspects . . . . .	41
2.7 Bimolecular processes of excited states . . . . .	43
2.7.1 General considerations . . . . .	43
2.7.2 Thermodynamic aspects . . . . .	44
2.7.3 Kinetic aspects . . . . .	45
<b>3. Supramolecular properties</b> . . . . .	51
3.1 Introduction . . . . .	51
3.2 Supermolecules as localized multicomponent electronic systems . . . . .	54
3.3 Properties of molecular components . . . . .	58
3.4 Intercomponent processes . . . . .	60

3.4.1 Radiative processes . . . . .	61
3.4.2 Thermal electron transfer . . . . .	63
3.4.3 Photoinduced electron transfer . . . . .	65
3.4.4 Electron-transfer kinetics . . . . .	65
3.4.5 Electronic energy transfer . . . . .	71
3.4.6 Energy vs electron transfer . . . . .	73
<b>4. Control and tuning of excited-state properties of molecular components . . . . .</b>	<b>76</b>
4.1 Introduction . . . . .	76
4.2 Perturbing spectroscopic levels . . . . .	77
4.3 Introducing new energy levels . . . . .	80
4.4 Introducing nuclear constraints . . . . .	82
4.4.1 Covalent links . . . . .	83
4.4.2 Host-guest interactions . . . . .	85
4.5 Conclusions . . . . .	86
<b>5. Covalently-linked systems: photoinduced electron transfer . . . . .</b>	<b>89</b>
5.1 Introduction . . . . .	89
5.2 Kinetic considerations . . . . .	94
5.3 Organic systems with steroid-type bridges . . . . .	98
5.4 Organic systems with norbornylogous bridges . . . . .	102
5.5 Organic systems with aromatic bridges . . . . .	107
5.6 Porphyrin-quencher systems . . . . .	110
5.6.1 Porphyrin-quinone systems with trypticene bridges . . . . .	110
5.6.2 Porphyrin-quinone systems with bicyclooctane bridges . . . . .	113
5.6.3 Porphyrin-quinone systems with polyene bridges . . . . .	114
5.6.4 Porphyrin-quinone systems with flexible bridges . . . . .	116
5.6.5 Structural effects in porphyrin-quinone systems . . . . .	119
5.6.6 Capped porphyrin-quinone systems . . . . .	120
5.6.7 Porphyrin-viologen systems . . . . .	121
5.6.8 Porphyrin-host covalently-linked systems . . . . .	122
5.7 Systems based on metal complexes . . . . .	123
5.7.1 Chromophore-quencher complexes . . . . .	125
5.7.2 Binuclear metal complexes . . . . .	132
5.7.3 Polynuclear metal complexes . . . . .	140
5.8 Triad and tetrad systems featuring photoinduced charge separation . . . . .	145
5.9 Macromolecular systems . . . . .	150
<b>6. Covalently-linked systems: electronic energy transfer . . . . .</b>	<b>161</b>
6.1 Introduction . . . . .	161
6.2 Supramolecular systems based on organic molecular components . . . . .	161
6.2.1 Systems with rigid or conformationally-restricted bridges . . . . .	161
6.2.2 Systems with flexible bridges . . . . .	167
6.3 Supramolecular systems based on metal complexes . . . . .	170
6.3.1 Introduction . . . . .	170
6.3.2 Complexes linked through bridges . . . . .	170

6.3.2.1	Identical complexes. . . . .	170
6.3.2.2	Complexes of different metals . . . . .	172
6.3.2.3	Complexes of different ligands. . . . .	173
6.3.3	Metal-containing fragments bridged by polyimine ligands . . . . .	174
6.3.3.1	Introduction . . . . .	174
6.3.3.2	Symmetrical homometallic binuclear complexes . . . . .	174
6.3.3.3	Unsymmetrical homometallic binuclear complexes. . . . .	178
6.3.3.4	Heterometallic binuclear complexes . . . . .	178
6.3.3.5	Complexes of higher nuclearity . . . . .	180
6.3.4	Metal-containing fragments bridged by cyanide ligands . . . . .	184
6.3.4.1	Oligonuclear ruthenium complexes. . . . .	184
6.3.4.2	Ruthenium–chromium complexes . . . . .	186
6.3.4.3	Cobalt–chromium complexes . . . . .	188
6.3.4.4	Chromium–chromium complexes . . . . .	189
6.3.4.5	Cobalt–cobalt complexes . . . . .	190
6.3.5	Other systems . . . . .	190
<b>7.</b>	<b>Structural changes in photoflexible systems.</b> . . . .	<b>197</b>
7.1	Introduction . . . . .	197
7.2	Photoactive components . . . . .	197
7.2.1	Olefin-type compounds . . . . .	198
7.2.2	Azobenzene and related compounds . . . . .	199
7.2.3	Spiroyrans and related compounds . . . . .	200
7.2.4	TICT compounds. . . . .	202
7.3	Supramolecular systems . . . . .	204
7.3.1	Systems involving crown ethers . . . . .	204
7.3.1.1	Crown ethers with an intramolecular bridge . . . . .	204
7.3.1.2	Cylindrical and phane-type crown ethers . . . . .	205
7.3.1.3	“Butterfly” and capped crown ethers . . . . .	208
7.3.2	Systems involving cyclodextrins. . . . .	210
7.3.3	Systems involving metal complexes . . . . .	211
7.3.4	Other systems . . . . .	212
7.4	Micelles, membranes, liquid crystals, and polymers. . . . .	215
7.4.1	Photoeffects on micelles . . . . .	215
7.4.2	Photocontrol of membrane functions . . . . .	215
7.4.3	Photoresponsive liquid crystals . . . . .	217
7.4.4	Photoresponsive polymers . . . . .	217
<b>8.</b>	<b>Ion pairs</b> . . . . .	<b>226</b>
8.1	Introduction . . . . .	226
8.2	Electronic energy levels . . . . .	227
8.3	Correlations between optical and thermal quantities . . . . .	230
8.4	Photoinduced processes . . . . .	231
8.4.1	Dynamic and static quenching. . . . .	233
8.4.2	Direct measurements of electron-transfer rates. . . . .	236
8.4.3	Photochemical reactions . . . . .	237
8.4.3.1	Metal complexes . . . . .	239

8.4.3.2 Organic compounds . . . . .	241
8.4.4 Luminescence . . . . .	243
8.5 Control and tuning of excited state properties . . . . .	243
<b>9. Electron donor–acceptor complexes and exciplexes . . . . .</b>	<b>248</b>
9.1 Introduction . . . . .	248
9.2 Absorption spectra . . . . .	251
9.3 Luminescence . . . . .	254
9.4 Photoinduced processes . . . . .	257
<b>10. Host–guest systems . . . . .</b>	<b>267</b>
10.1 Introduction . . . . .	267
10.2 Crown ethers and related species . . . . .	268
10.2.1 Complexation of metal cations . . . . .	268
10.2.2 Adducts with metal complexes . . . . .	274
10.2.3 Other systems . . . . .	278
10.3 Aza macrocycles and related species . . . . .	279
10.3.1 Complexation of metal cations . . . . .	280
10.3.2 Adducts of metal complexes with polyammonium macrocyclic receptors . . . . .	280
10.4 Cyclophanes and related species . . . . .	283
10.5 Cyclodextrin inclusion compounds . . . . .	288
10.5.1 Introduction . . . . .	288
10.5.2 Photophysics . . . . .	289
10.5.3 Photochemistry . . . . .	295
10.6 Adducts of DNA . . . . .	299
10.6.1 Introduction . . . . .	299
10.6.2 Intercalation . . . . .	299
10.6.3 Spectroscopy and photophysics . . . . .	301
10.6.4 Photochemistry . . . . .	304
10.6.5 Conclusions . . . . .	306
<b>11. Other systems . . . . .</b>	<b>319</b>
11.1 Caged metal ions . . . . .	319
11.1.1 Introduction . . . . .	319
11.1.2 Cobalt complexes . . . . .	319
11.1.3 Chromium complexes . . . . .	324
11.1.4 Lanthanide complexes . . . . .	326
11.1.5 Ruthenium complexes . . . . .	330
11.1.6 Conclusions . . . . .	333
11.2 Catenanes, rotaxanes, and related species . . . . .	333
11.2.1 Introduction . . . . .	333
11.2.2 Catenanes and rotaxanes . . . . .	334
11.2.3 Catenands and catenates . . . . .	337
11.2.4 Helicates . . . . .	341
11.3 Proton-transfer processes . . . . .	342
11.3.1 Introduction . . . . .	342

11.3.2 Photoinduced tautomerization . . . . .	345
11.3.3 Excited-state proton-transfer in metal complexes . . . . .	347
<b>12. Photochemical molecular devices . . . . .</b>	<b>355</b>
12.1 Introduction . . . . .	355
12.2 Artificial vs natural devices . . . . .	356
12.3 Machinery of photochemical molecular devices . . . . .	356
12.4 PMDs based on photoinduced electron transfer . . . . .	358
12.4.1 Conversion of light into chemical or electrical energy . . . . .	359
12.4.2 Photoinduced electron collection . . . . .	363
12.4.3 Remote electron-transfer photosensitization . . . . .	365
12.4.4 Switching electric signals . . . . .	366
12.5 PMDs based on electronic energy transfer . . . . .	367
12.5.1 Spectral sensitization . . . . .	367
12.5.2 Antenna effect . . . . .	370
12.5.3 Remote photosensitization . . . . .	371
12.5.4 Light-energy up-conversion . . . . .	374
12.6 PMDs based on photoinduced structural changes . . . . .	375
12.6.1 Switching electric signals . . . . .	376
12.6.2 Switching receptor ability . . . . .	377
12.6.3 Modification of cavity size . . . . .	377
12.6.4 Activation of coreceptor catalysis . . . . .	378
12.7 From PMDs to practical microdevices . . . . .	380
12.7.1 Interfacing with the macroscopic world . . . . .	380
12.7.2 Spectral sensitization of semiconductor electrodes . . . . .	381
12.7.3 Sensitization of charge separation in Langmuir–Blodgett films . . . . .	382
12.7.4 (Supra)molecular shift register . . . . .	383
12.8 Synthesis and self-organization . . . . .	385
<b>Author index . . . . .</b>	<b>395</b>
<b>Subject index . . . . .</b>	<b>422</b>
