# CONTENTS

Contributors	xvii
Preface	xxiii
Dedication	xxv

## 1. The Invertebrate Deuterostomes: An Introduction to Their Phylogeny, Reproduction, Development, and Genomics

*Charles A. Ettensohn, Gary M. Wessel, and Gregory A. Wray*

I. Introduction	1
II. Phylogeny	2
III. Reproduction	5
IV. Development	8
V. Genomics	10
References	11

## PART I Procurement, Maintenance & Culture of Oocytes, Embryos, Larvae and Adults

### 2. Care and Maintenance of Adult Echinoderms

*S. Anne Böttger, Charles W. Walker, and Tatsuya Unuma*

I. Overview	18
II. Introduction	18
III. Adult Echinoderm Models: Their Reproductive Cycles and Gametogenesis	18
IV. Obtaining Adult Echinoderms	24
V. Maintenance of Adult Echinoderms in Land-Based Systems	26
VI. Care and Handling of Adult Echinoderms	28
References	33

**3. Echinoderm Eggs and Embryos: Procurement and Culture***Kathy R. Foltz, Nikki L. Adams, and Linda L. Runft*

I. Introduction	40
II. Method for Sea Urchins (Class Echinoidea)	41
III. Method for Sea Stars (Class Asteroidea)	53
IV. Method for Brittle Stars (Class Ophiuroidea, Order Ophiurida)	60
V. Method for Sea Cucumbers (Class Holothuroidea)	64
VI. Method for Interspecific Crosses	68
VII. Summary	70
References	71

**4. Culture of Echinoderm Larvae through Metamorphosis***Gregory A. Wray, Chisato Kitazawa, and Benjamin Miner*

I. Introduction	75
II. Materials for Culturing Algae and Larvae	76
III. Establishing Algal Cultures	78
IV. Culturing Echinoderm Larvae	81
V. Metamorphosis and Beyond	84
References	85

**5. Obtaining and Handling Echinoderm Oocytes***Gary M. Wessel, Ekaterina Voronina, and Jacqueline M. Brooks*

I. Introduction	88
II. Experimental Preparation	88
III. Methods of Oocyte Collection	92
IV. Sea Urchin Oocytes Cultured <i>In Vitro</i>	98
V. Labeling of Oocyte Components	101
VI. Introduction of Experimental Substances into the Oocytes	110
VII. Concluding Remarks/Outlook	113
References	114

**6. Procurement and Culture of Ascidian Embryos***Billie J. Swalla*

I. Overview	116
II. Ascidian Development and Metamorphosis	116
III. Larval Tissue Specification	126
IV. Experimental Techniques	129
V. Protocols	132
References	139

**7. Culture of Adult Ascidians and Ascidian Genetics**

*Carolyn Hendrickson, Lionel Christiaen, Karine Deschet, Di Jiang, Jean-Stéphane Joly, Laurent Legendre, Yuki Nakatani, Jason Tresser, and William C. Smith*

I. Overview	143
II. Introduction	144
III. Culturing Ascidians	145
IV. Induced Developmental Mutants and Natural Variants/Mutants	153
V. Linkage Analysis and Mapping Genes in Ascidians	160
References	169

**8. Hemichordate Embryos: Procurement, Culture, and Basic Methods**

*Christopher J. Lowe, Kuni Tagawa, Tom Humphreys, Marc Kirschner, and John Gerhart*

I. Introduction	172
II. Procurement, Spawning, and Culture of <i>S. kowalevskii</i>	173
III. Procurement, Spawning, and Culture of <i>Ptychodera flava</i>	179
IV. Removal of Vitelline Envelope in <i>S. kowalevskii</i>	182
V. Whole-Mount <i>In Situ</i> Hybridization	183
VI. Preparation of Blocking Reagent for <i>P. flava</i>	190
VII. Materials and Reagents	191
References	192

**9. Cephalochordate (Amphioxus) Embryos: Procurement, Culture, and Basic Methods**

*Linda Z. Holland and Ju-Ka Yu*

I. Overview	195
II. Introduction	196
III. Obtaining Gametes of <i>Branchiostoma floridae</i>	200
IV. Raising Embryos	202
V. Manipulating Embryos	206
VI. Amphioxus Resources Available	212
VII. Concluding Remarks	213
References	213

## PART II Embryological Approaches

### 10. Quantitative Microinjection of Oocytes, Eggs, and Embryos

*Laurinda A. Jaffe and Mark Terasaki*

I. Introduction	219
II. Methods	220
III. Equipment and Supplies (Prices are as of December, 2002)	230
References	242

### 11. Blastomere Isolation and Transplantation

*Hyla Sweet, Shonan Amemiya, Andrew Ransick, Takuya Minokawa, David R. McClay, Athula Wikramanayake, Ritsu Kuraishi, Masato Kiyomoto, Hiroki Nishida, and Jonathan Henry*

I. Introduction	244
II. Preparation of Mouth Pipettes and Needles	245
III. Removal of Fertilization Envelope of Sea Urchin Eggs	248
IV. Isolation and Recombination of Blastomeres in Sea Urchin Embryos	249
V. Blastomere Isolation and Transplantation in Starfish Embryos	263
VI. Blastomere Isolation and Transplantation in Amphioxus	265
VII. Blastomere Isolation and Transplantation in Ascidians	266
VIII. Lineage Tracing, Blastomere Isolation, and Transplantation in Hemichordates	267
References	270

### 12. Isolation and Culture of Micromeres and Primary Mesenchyme Cells

*Fred H. Wilt and Stephen C. Benson*

I. Introduction	273
II. Isolation and Culture of Micromeres	275
III. Isolation and Culture of Primary Mesenchyme Cells	282
References	284

### 13. Rapid Microinjection of Fertilized Eggs

*Melani S. Cheers and Charles A. Ettensohn*

I. Introduction	287
II. Equipment	289
III. Experimental Protocols	292
References	310

**14. Methods for Embryo Dissociation and Analysis of Cell Adhesion***David R. McClay*

I. Introduction	311
II. Gaining Access to the Egg and Embryo	312
III. Cell Adhesion Assays: Nonquantitative and Semiquantitative	317
IV. Quantitative Centrifugation Assay	320
References	328

**PART III Cell Biological Approaches****15. Analysis of Sea Urchin Embryo Gene Expression by Immunocytochemistry***Judith M. Venuti, Carmen Pepicelli, and Vera Lynn Flowers*

I. Introduction	334
II. Immunocytochemistry on Whole Embryos	335
III. Immunostaining Small Numbers of Embryos	351
IV. Co-localization	359
V. Troubleshooting	364
References	366

**16. Light Microscopy of Echinoderm Embryos***Laila Strickland, George von Dassow, Jan Ellenberg, Victoria Foe,  
Peter Lenart, and David Burgess*

I. Introduction (D. Burgess and L. Strickland)	372
II. Formaldehyde Fixation of Cleavage Stage Sea Urchin Embryos	372
III. Staining and Imaging Fixed Embryos	382
IV. Simultaneous Fixation and Visualization of the Actin and Microtubule Cytoskeletons (G. von Dassow and V. Foe)	385
V. Observation of Live Embryos (D. Burgess and L. Strickland)	393
VI. 4-D Imaging of Fluorescent Markers in Live Starfish Oocytes (J. Ellenberg and P. Lenart)	399
References	407

**17. TEM and SEM Methods***Bruce J. Crawford and Robert D. Burke*

I. Introduction	412
II. Basic Fixation and Preparation	412
III. Embedding Media	421
IV. Preservation of Extracellular Matrix	424

V. Fixation for SEM	426
VI. Quick Freezing and Freeze-Substitution	428
VII. Fixation for Immunohistochemistry and Immunocytochemistry	434
VIII. Immunogold Methods	434
IX. Ultrastructural Immunoperoxidase	436
X. Preparation of Colloidal Gold Reagents (Horisberger, 1981; Slot and Geuze, 1985) as modified by Campbell (1990) and Reimer (1994)	437
References	440
<b>18. Calcium Imaging</b>	
<i>Michael Whitaker</i>	
I. Introduction	443
II. Calcium Signals in Embryos	444
III. Getting Calcium Sensors into Embryos	450
IV. Measuring Emitted Light	454
V. Fluorescence Lifetime Imaging	459
VI. Calibration	459
VII. Manipulating Intracellular Calcium	460
VIII. Conclusions and Perspectives	462
References	463
<b>19. Labeling of Cell Membranes and Compartments for Live Cell Fluorescence Microscopy</b>	
<i>Mark Terasaki and Laurinda A. Jaffe</i>	
I. Introduction	469
II. Labeling of Extracellular Space/Endocytosis/Exocytosis	471
III. Labeling of Plasma Membrane/Exocytosis/Endosomes	472
IV. Labeling of the Cytosol	475
V. Yolk Platelets/Reserve Granules	476
VI. Mitochondria	478
VII. Other Organelles	478
VIII. Endoplasmic Reticulum	479
IX. Golgi Apparatus	483
X. Nucleus	485
XI. Microscopy Considerations	486
XII. Future Directions	487
References	487

**20. Isolation of Organelles and Components from Sea Urchin Eggs and Embryos***Gary M. Wessel and Victor D. Vacquier*

I. Overview	492
II. Egg Jelly Molecules Affecting Sperm	492
III. Isolation of the Vitelline Layer from Sea Urchin Eggs	496
IV. Isolation of the Cell Surface Complex and the Plasma Membrane–Vitelline Layer (PMVL) Complex from Sea Urchin Eggs	498
V. The Cytolytic Isolation of the Egg Cortex	500
VI. Isolation of Cortical Granules	501
VII. Isolation of Yolk Platelets	503
VIII. Isolation of Mitochondria from Eggs and Embryos	504
IX. Isolation of Plasma Membranes and Lipid Rafts from Eggs and Zygotes	505
X. Isolation of Microsomes Containing the Endoplasmic Reticulum	507
XI. Nuclear Isolation Procedures	507
XII. Removal and Isolation of the Fertilization Envelope	508
XIII. Isolation of Cilia from Embryos	511
XIV. Isolation of Extracellular Matrices from Embryos and Larvae	512
XV. Isolation of Sea Urchin Larval Skeletons	517
XVI. Resources for the Isolation of Additional Organelles	518
References	519

**21. Sea Urchin Spermatozoa***Victor D. Vacquier and Noritaka Hirohashi*

I. Introduction	524
II. Obtaining Sperm and Removing Coelomocytes	528
III. Isolating Sperm Heads, Flagella, and Chromatin	529
IV. The Isolated Sperm Flagellum as a Sealed Compartment	530
V. Extracting Intact Sperm or Isolated Flagella and Heads with Detergents	531
VI. Wheat Germ Agglutinin (WGA) Affinity Chromatography of Sperm Membrane Proteins	532
VII. Isolating Sperm Plasma Membranes	532
VIII. Isolation of Acrosome Reaction Vesicle Membranes (ARV)	535
IX. Isolating Lipid Rafts from Sperm	536
X. Scoring the Acrosome Reaction by Phase Contrast Microscopy	537
XI. Sea Urchin Sperm Bindin	539
References	540

**22. Measuring Ion Fluxes in Sperm***Alberto Darszon, Christopher D. Wood, Carmen Beltrán, Daniel Sánchez, Esmeralda Rodríguez, Julia Gorelik, Yuri E. Korchev, and Takuya Nishigaki*

I. Overview	546
II. Introduction	546

III. Sperm Physiology is Deeply Influenced by Ion Channels and Transporters	547
IV. Strategies to Study Sperm Ion Channels and Transporters	549
References	573

## PART IV Molecular Biological Approaches

### 23. Isolating DNA, RNA, Polysomes, and Protein

*Bruce P. Brandhorst*

I. Overview	580
II. Introduction	580
III. Purification of Total RNA	580
IV. Purification of Cytoplasmic and Polysomal RNA	586
V. Purification of Genomic DNA	589
VI. Preparation of Protein Samples for One- and Two-Dimensional Gel Electrophoresis	592
References	598

### 24. Detection of mRNA by *In Situ* Hybridization and RT-PCR

*Andrew Ransick*

I. Introduction	601
II. <i>In Situ</i> Hybridization	602
III. Quantitative PCR	613
References	618

### 25. Using Reporter Genes to Study *cis*-Regulatory Elements

*Maria I. Arnone, Ivan J. Dmochowski, and Christian Gache*

Overview	622
I. Introduction	622
II. Using Chloramphenicol Acetyltransferase (CAT) Reporter Gene	627
III. Using Green Fluorescent Protein (GFP) Reporter Gene	632
IV. Quantitative Imaging of GFP in Living Embryos	633
V. Using Luciferase ( <i>luc</i> ) Reporter Gene	640
VI. Using <i>lacZ</i> Reporter Gene	643
VII. Summary, Prospects, Concluding Remarks	648
References	649

**26. Identification of Sequence-Specific DNA Binding Proteins***James A. Coffman and Chiou-Hwa Yuh*

Overview	654
I. Introduction	654
II. Preparation of Nuclear Extracts	655
III. Identification of Transcription Factor Target Sites by Footprint and Electrophoretic Mobility Shift Analysis (EMSA)	658
IV. Affinity Purification of Sequence-Specific DNA Binding Proteins	662
V. Identification of Affinity-Purified DNA-Binding Proteins in SDS Gels	666
VI. Preparation of Affinity-Purified Transcription Factors for Protein Sequencing	671
VII. Prospects	673
References	674

**27. Expression of Exogenous mRNAs to Study Gene Function in the Sea Urchin Embryo***Thierry Lepage and Christian Gache*

Overview	677
I. Introduction	678
II. Methods for Expressing Synthetic mRNA in the Sea Urchin Embryo	688
III. Summary, Prospects, Concluding Remarks	695
References	696

**28. Disruption of Gene Function Using Antisense Morpholinos***Lynne M. Angerer and Robert C. Angerer*

I. Introduction	699
II. Morpholino-Mediated Loss-of-Function: Advantages and Limitations	700
III. Morpholino Methods	704
IV. Concluding Remarks	709
References	710

**29. Generation and Use of Transgenic Ascidian Embryos***Robert W. Zeller*

Overview	713
I. Ascidian Embryos as Model Chordate Embryos	714
II. Transgenic Ascidian Embryos	716
III. Fundamentals of Electroporation	719
IV. Transgene Construction	720
V. Detailed Protocols for Electroporation of Ascidian Zygotes	721
VI. List of Required Chemicals and Supplies	725
References	726

**PART V Genomics****30. Genomic Resources for the Study of Sea Urchin Development***R. Andrew Cameron, Jonathan P. Rast, and C. Titus Brown*

Overview	734
I. Introduction	734
II. Sea Urchin Arrayed Library Resources	736
III. Computational Tools	746
IV. Sea Urchin Genome Project Web Site	750
References	755

**31. Genomic Resources for Ascidians: Sequence/Expression Databases and Genome Projects***Nori Satoh*

Overview	759
I. Introduction	760
II. The cDNA Projects: cDNA Sequence and Expression Databases	762
III. The Genome Project	769
IV. Conclusion	771
References	772

**32. Gene Regulatory Network Analysis in Sea Urchin Embryos***Paola Oliveri and Eric H. Davidson*

I. Introduction	775
II. Perturbation Analysis	777
III. Assembling and Testing the GRN Logic Map	787
IV. Summary	792
References	793

**PART VI Echinoderm Eggs and Embryos in the Teaching Lab****33. Sea Urchin Gametes in the Teaching Laboratory: Good Experiments and Good Experiences***David Epel, Victor D. Vacquier, Margaret Peeler, Pam Miller, and Chris Patton*

Overview	798
I. Introduction	798
II. Obtaining Adult Urchins and Gametes for the Classroom	799

III. Some Guidelines for Using Sea Urchin Gametes in the Classroom	801
IV. Basic Introductory Labs	802
V. Inquiry-Based Experiments Using the Basic Fertilization Protocol	810
VI. Inquiry-Based Experiments in Later Development: Experiments on Differential Gene Expression	819
VII. Experiments Using Morphology as an Endpoint	821
VIII. Epilogue	822
References	822
Appendix	825
Index	841
Volumes in Series	877
