

Physical Chemistry for the Life Sciences

Peter Atkins

Professor of Chemistry, Oxford University

Julio de Paula

Professor of Chemistry, Haverford College

OXFORD
UNIVERSITY PRESS

Oxford, UK

 **W. H. Freeman and Company**
New York

About the cover: Crystals of vitamin C (ascorbic acid) viewed by light microscopy at a magnification of 20x. Vitamin C is an important antioxidant, a substance that can halt the progress of cellular damage through chemical reactions with certain harmful by-products of metabolism. The mechanism of action of antioxidants is discussed in Chapter 10.

Contents

Prologue 1

The structure of physical chemistry 1

Applications of physical chemistry to biology and medicine 2

(a) Techniques for the study of biological systems 2

(b) Protein folding 3

(c) Rational drug design 4

(d) Biological energy conversion 5

Fundamentals 7

F.1 The states of matter 7

F.2 Physical state 8

F.3 Force 8

F.4 Energy 9

F.5 Pressure 10

F.6 Temperature 13

F.7 Equations of state 14

Checklist of key ideas 23

Discussion questions 23

Exercises 23

Project 25

I Biochemical Thermodynamics 27

1 The First Law 28

The conservation of energy 28

1.1 Systems and surroundings 29

1.2 Work and heat 29

1.3 Energy conversion in living organisms 32

1.4 The measurement of work 34

1.5 The measurement of heat 40

Internal energy and enthalpy 43

1.6 The internal energy 43

1.7 The enthalpy 46

1.8 The temperature variation of the enthalpy 49

Physical change 50

1.9 The enthalpy of phase transition 50

1.10 TOOLBOX: Differential scanning calorimetry 54

CASE STUDY 1.1: Thermal denaturation of a protein 56

Chemical change 56

1.11 The bond enthalpy 57

1.12 Thermochemical properties of fuels 60

1.13 The combination of reaction enthalpies 64

1.14 Standard enthalpies of formation 65

1.15 The variation of reaction enthalpy with temperature 68

Checklist of key ideas 71

Discussion questions 72

Exercises 72

Project 75

2 The Second Law 76

Entropy 77

2.1 The direction of spontaneous change 77

2.2 Entropy and the Second Law 78

2.3 The entropy change accompanying heating 80

2.4 The entropy change accompanying a phase transition 82

2.5 Entropy changes in the surroundings 84

2.6 Absolute entropies and the Third Law of thermodynamics 86

2.7 The standard reaction entropy 89

2.8 The spontaneity of chemical reactions 90

The Gibbs energy 91

2.9 Focusing on the system 91

2.10 Spontaneity and the Gibbs energy 92

CASE STUDY 2.1: Life and the Second Law of thermodynamics 93

- 2.11 The Gibbs energy of assembly of proteins and biological membranes 93
 - (a) The structures of proteins and biological membranes 93
 - (b) The hydrophobic interaction 95
- 2.12 Work and the Gibbs energy change 97

CASE STUDY 2.2: The action of adenosine triphosphate

- Checklist of key ideas* 100
- Discussion questions* 100
- Exercises* 101
- Projects* 102

3 Phase Equilibria 104**The thermodynamics of transition 104**

- 3.1 The condition of stability 104
- 3.2 The variation of Gibbs energy with pressure 105
- 3.3 The variation of Gibbs energy with temperature 108
- 3.4 Phase diagrams 109
 - (a) Phase boundaries 110
 - (b) Characteristic points 112
 - (c) The phase diagram of water 114

Phase transitions in biopolymers and aggregates 115

- 3.5 The stability of nucleic acids and proteins 116
- 3.6 Phase transitions of biological membranes 119

The thermodynamic description of mixtures 120

- 3.7 Measures of concentration 120
- 3.8 The chemical potential 124
- 3.9 Ideal solutions 126
- 3.10 Ideal-dilute solutions 129

CASE STUDY 3.1: Gas solubility and breathing 131

- 3.11 Real solutions: activities 133

Colligative properties 134

- 3.12 The modification of boiling and freezing points 134

- 3.13 Osmosis 136
- 3.14 The osmotic pressure of solutions of biopolymers 138

Checklist of key ideas 144

Further information 3.1: The phase rule 145

Discussion questions 146

Exercises 146

Projects 149

4 Chemical Equilibrium 151**Thermodynamic background 151**

- 4.1 The reaction Gibbs energy 151
- 4.2 The variation of $\Delta_r G$ with composition 153
- 4.3 Reactions at equilibrium 156

CASE STUDY 4.1: Binding of oxygen to myoglobin and hemoglobin 159

- 4.4 The standard reaction Gibbs energy 161

The response of equilibria to the conditions 164

- 4.5 The presence of a catalyst 164
- 4.6 The effect of temperature 165

Coupled reactions in bioenergetics 166

- 4.7 The function of adenosine triphosphate 167

CASE STUDY 4.2: The biosynthesis of proteins 169

- 4.8 The oxidation of glucose 169

Proton transfer equilibria 174

- 4.9 Brønsted-Lowry theory 174
- 4.10 Protonation and deprotonation 174
- 4.11 Polyprotic acids 181

CASE STUDY 4.3: The fractional composition of a solution of lysine 183

- 4.12 Amphiprotic systems 186
- 4.13 Buffer solutions 189

CASE STUDY 4.4: Buffer action in blood 191

Checklist of key ideas 192

Further information 4.1: The complete expression for the pH of a solution of a weak acid 193

Discussion questions 194

Exercises 194

Projects 198

5 Thermodynamics of Ion and Electron Transport 200

Transport of ions across biological membranes 200

5.1 Ions in solution 200

5.2 Passive and active transport of ions across biological membranes 204

5.3 Ion channels and ion pumps 206

CASE STUDY 5.1: Action potentials 207

Redox reactions 208

5.4 Half-reactions 208

5.5 Reactions in electrochemical cells 211

5.6 The Nernst equation 214

5.7 Standard potentials 217

5.8 TOOLBOX: The measurement of pH 222

Applications of standard potentials 223

5.9 The electrochemical series 223

5.10 The determination of thermodynamic functions 223

Electron transfer in bioenergetics 227

5.11 The respiratory chain 227

5.12 Plant photosynthesis 230

Checklist of key ideas 232

Discussion questions 232

Exercises 233

Project 236

II The Kinetics of Life Processes 237

6 The Rates of Reactions 238

Reaction rates 238

6.1 Experimental techniques 238

(a) TOOLBOX: Spectrophotometry 239

(b) TOOLBOX: Kinetic techniques for fast biochemical reactions 241

6.2 The definition of reaction rate 243

6.3 Rate laws and rate constants 244

6.4 Reaction order 245

6.5 The determination of the rate law 247

6.6 Integrated rate laws 249

(a) First-order reactions 250

CASE STUDY 6.1: Pharmacokinetics 252

(b) Second-order reactions 253

The temperature dependence of reaction rates 256

6.7 The Arrhenius equation 256

6.8 Interpretation of the Arrhenius parameters 258

CASE STUDY 6.2: Enzymes and the acceleration of biochemical reactions 259

Checklist of key ideas 260

Discussion questions 260

Exercises 260

Project 263

7 Accounting for the Rate Laws 265

Reaction mechanisms 265

7.1 The approach to equilibrium 265

7.2 TOOLBOX: Relaxation techniques in biochemistry 267

CASE STUDY 7.1: Fast events in protein folding 269

7.3 Elementary reactions 270

7.4 Consecutive reactions 271

(a) The variation of concentration with time 272

(b) The rate-determining step 273

(c) The steady-state approximation 274

(d) Pre-equilibria 275

CASE STUDY 7.2: Mechanisms of protein folding and unfolding 277

7.5 Diffusion control 278

CASE STUDY 7.3: Diffusion control of enzyme-catalyzed reactions 280

7.6 Kinetic and thermodynamic control 280

Reaction dynamics 281

7.7 Collision theory 281

7.8 Transition state theory 283

7.9 The kinetic salt effect 286

Checklist of key ideas 289

Further information 7.1: Molecular collisions in the gas phase 289

Discussion questions 291

Exercises 291

Projects 294

8 Complex Biochemical Processes 296

Transport across membranes 296

8.1 Molecular motion in liquids 296

8.2 Molecular motion across membranes 300

8.3 The mobility of ions 302

8.4 **TOOLBOX**: Electrophoresis 303

8.5 Transport across ion channels and ion pumps 306

Enzymes 308

8.6 The Michaelis-Menten mechanism of enzyme catalysis 309

8.7 The analysis of complex mechanisms 313

CASE STUDY 8.1: The molecular basis of catalysis by hydrolytic enzymes 314

8.8 The catalytic efficiency of enzymes 316

8.9 Enzyme inhibition 317

Electron transfer in biological systems 320

8.10 The rates of electron transfer processes 321

8.11 The theory of electron transfer processes 323

8.12 Experimental tests of the theory 324

8.13 The Marcus cross-relation 325

Checklist of key ideas 328

Further information 8.1: Fick's laws of diffusion 329

Discussion questions 330

Exercises 331

Projects 335

III Biomolecular Structure 339

9 The Dynamics of Microscopic Systems 340

Principles of quantum theory 340

9.1 Wave-particle duality 341

9.2 **TOOLBOX**: Electron microscopy 344

9.3 The Schrödinger equation 345

9.4 The uncertainty principle 347

Applications of quantum theory 350

9.5 Translation 350

(a) The particle in a box 351

CASE STUDY 9.1: The electronic structure of β -carotene 354

(b) Tunneling 355

(c) **TOOLBOX**: Scanning probe microscopy 356

9.6 Rotation 358

(a) A particle on a ring 358

CASE STUDY 9.2: The electronic structure of phenylalanine 360

(b) A particle on a sphere 361

9.7 Vibration: the harmonic oscillator 361

CASE STUDY 9.3: The vibration of the N—H bond of the peptide link 363

Hydrogenic atoms 364

9.8 The permitted energies of hydrogenic atoms 364

9.9 Atomic orbitals 366

(a) Shells and subshells 367

(b) The shapes of atomic orbitals 368

The structures of many-electron atoms 374

9.10 The orbital approximation and the Pauli exclusion principle 374

9.11 Penetration and shielding 375

9.12 The building-up principle 376

9.13 The configurations of cations and anions 379

9.14 Atomic and ionic radii 380

CASE STUDY 9.4: The role of the Zn^{2+} ion in biochemistry 382

9.15 Ionization energy and electron affinity 383

Checklist of key ideas 385

Further information 9.1: A justification of the Schrödinger equation 387

Further information 9.2: The Pauli principle 387

Discussion questions 388

Exercises 388
