Preface	xi
Acknowledgments	xvii
<b>1 Exordium</b>	<b>1</b>
1.1 Introduction	1
1.2 Are the moving average and Fourier series sufficiently useful?	4
1.3 Is a histogram or normal distribution sufficiently powerful?	8
1.4 Is interpolation sufficiently powerful?	13
1.5 Should we use a descriptive equation?	16
1.6 Parametric regression and nonparametric regression	18
<b>2 Smoothing for data with an equispaced predictor</b>	<b>23</b>
2.1 Introduction	23
2.2 Moving average and binomial filter	23
2.3 Hat matrix	32
2.4 Local linear regression	43
2.5 Smoothing spline	51
2.6 Analysis on eigenvalue of hat matrix	55
2.7 Examples of S-Plus object	79
References	94
Problems	95
<b>3 Nonparametric regression for one-dimensional predictor</b>	<b>103</b>
	vii

3.1	Introduction	103
3.2	Trade-off between bias and variance	105
3.3	Index to select beneficial regression equations	114
3.4	Nadaraya-Watson estimator	130
3.5	Local polynomial regression	139
3.6	Natural spline and smoothing spline	151
3.7	LOESS	185
3.8	Supersmoother	191
3.9	LOWESS	195
3.10	Examples of S-Plus object	197
	References	225
	Problems	226
<b>4</b>	<b>Multidimensional smoothing</b>	<b>231</b>
4.1	Introduction	231
4.2	Local polynomial regression for multidimensional predictor	232
4.3	Thin plate smoothing splines	234
4.4	LOESS and LOWESS with plural predictors	237
4.5	Kriging	238
4.6	Additive model	258
4.7	ACE	270
4.8	Projection pursuit regression	283
4.9	Examples of S-Plus object	287
	References	318
	Problems	319
<b>5</b>	<b>Nonparametric regression with predictors represented as distributions</b>	<b>325</b>
5.1	Introduction	325
5.2	Use of distributions as predictors	326
5.3	Nonparametric DVR method	335
5.4	Form of nonparametric regression with predictors represented as distributions	337
5.5	Examples of S-Plus object	344
	References	354
	Problems	355
<b>6</b>	<b>Smoothing of histograms and nonparametric probability density functions</b>	<b>359</b>

6.1	Introduction	359
6.2	Histogram	360
6.3	Smoothing a histogram	363
6.4	Nonparametric probability density function	379
6.5	Examples of S-Plus object	385
	References	405
	Problems	406
<b>7</b>	<b>Pattern recognition</b>	<b>409</b>
7.1	Introduction	409
7.2	Bayes' decision rule	410
7.3	Linear discriminant rule and quadratic discriminant rule	414
7.4	Classification using nonparametric probability density function	418
7.5	Logistic regression	421
7.6	Neural networks	427
7.7	Tree-based model	429
7.8	k-nearest-neighbor classifier	434
7.9	Nonparametric regression based on the least squares	435
7.10	Transformation of feature vectors	439
7.11	Examples of S-Plus object	444
	References	470
	Problems	471
<b>Appendix A:</b>	<b>Creation and applications of B-spline bases</b>	<b>473</b>
A.1	Introduction	473
A.2	Method to create B-spline basis	474
A.3	Natural spline created by B-spline	479
A.4	Application to smoothing spline	482
A.5	Examples of S-Plus object	484
	References	500
<b>Appendix B:</b>	<b>R objects</b>	<b>501</b>
B.1	Introduction	501
B.2	Transformation of S-Plus objects in Chapter 2	501
B.3	Transformation of S-Plus objects in Chapter 3	502
B.4	Transformation of S-Plus objects in Chapter 4	507
B.5	Transformation of S-Plus objects in Chapter 5	517
B.6	Transformation of S-Plus objects in Chapter 6	517
B.7	Transformation of S-Plus objects in Chapter 7	523

**X** CONTENTS

B.8	Transformation of S-Plus objects in Appendix A	526
