Contents

Preface to the Third Edition	ix
Preface to the Second Edition	xi
Preface to the First Edition	xv
1 Defining Artificial Intelligence	1
1.1 Background	1
1.2 The Turing Test	3
1.3 Simulation of Human Expertise	5
1.3.1 Samuel's Checker Program	6
1.3.2 Chess Programs	8
1.3.3 Expert Systems	11
1.3.4 A Criticism of the Expert Systems or Knowledge-Based Approach	13
1.3.5 Fuzzy Systems	15
1.3.6 Perspective on Methods Employing Specific Heuristics	16
1.4 Neural Networks	17
1.5 Definition of Intelligence	21
1.6 Intelligence, the Scientific Method, and Evolution	23
1.7 Evolving Artificial Intelligence	26
References	27
Chapter 1 Exercises	31
2 Natural Evolution	33
2.1 The Neo-Darwinian Paradigm	33
2.2 The Genotype and the Phenotype: The Optimization of Behavior	34
2.3 Implications of Wright's Adaptive Topography: Optimization Is Extensive Yet Incomplete	38
2.4 The Evolution of Complexity: Minimizing Surprise	40
2.5 Sexual Reproduction	41
2.6 Sexual Selection	43
2.7 Assessing the Beneficiary of Evolutionary Optimization	44

2.8	Challenges to Neo-Darwinism	49
2.8.1	Neutral Mutations and the Neo-Darwinian Paradigm	49
2.8.2	Punctuated Equilibrium	49
2.9	Summary	51
	References	52
	Chapter 2 Exercises	58
3	Computer Simulation of Natural Evolution	59
3.1	Early Speculations and Specific Attempts	59
3.1.1	Evolutionary Operation	59
3.1.2	A Learning Machine	60
3.2	Artificial Life	61
3.3	Evolutionary Programming	64
3.4	Evolution Strategies	71
3.5	Genetic Algorithms	75
3.6	The Evolution of Evolutionary Computation	84
	References	87
	Chapter 3 Exercises	101
4	Theoretical and Empirical Properties of Evolutionary Computation	105
4.1	The Challenge	105
4.2	Theoretical Analysis of Evolutionary Computation	106
4.2.1	The Framework for Analysis	106
4.2.2	Convergence in the Limit	107
4.2.3	The Error of Minimizing Expected Losses in Schema Processing	117
4.2.3.1	The Two-Armed Bandit Problem	119
4.2.3.2	Extending the Analysis for “Optimally” Allocating Trials	120
4.2.3.3	Limitations of the Analysis	121
4.2.4	Misallocating Trials and the Schema Theorem in the Presence of Noise	124
4.2.5	Analyzing Selection	127
4.2.6	Convergence Rates for Evolutionary Algorithms	128
4.2.7	Does a Best Evolutionary Algorithm Exist?	138
4.3	Empirical Analysis	142
4.3.1	Variations of Crossover	142
4.3.2	Dynamic Parameter Encoding	147
4.3.3	Comparing Crossover to Mutation	150
4.3.4	Crossover as a Macromutation	158
4.3.5	Self-Adaptation in Evolutionary Algorithms	159
4.3.6	Fitness Distributions of Search Operators	162
4.4	Discussion	167

References	172
Chapter 4 Exercises	178
5 Intelligent Behavior	183
5.1 Intelligence in Static and Dynamic Environments	183
5.2 General Problem Solving: Experiments with Tic-Tac-Toe	185
5.3 The Prisoner's Dilemma: Coevolutionary Adaptation	193
5.3.1 Background	198
5.3.2 Evolving Finite-State Representations	200
5.4 Learning How to Play Checkers without Relying on Expert Knowledge	215
5.5 Evolving a Self-Learning Chess Player	231
5.6 Discussion	239
References	242
Chapter 5 Exercises	246
6 Perspective	249
6.1 Evolution as a Unifying Principle of Intelligence	249
6.2 Prediction and the Language-like Nature of Intelligence	250
6.3 The Misplaced Emphasis on Emulating Genetic Mechanisms	252
6.4 Bottom-Up Versus Top-Down	254
6.5 Toward a New Philosophy of Machine Intelligence	256
References	257
Chapter 6 Exercises	260
Glossary	263
Index	267
About the Author	273
