TABLE OF CONTENTS

		PAGE
PREFACE		V
INTRODUCTION		XV
CHAPTER 1. - INTRODUCTION TO THE SOLID STATE		
1.	Changes of State	1
2.	Energetics of Changes of State	3
3.	Propagation Models and the Close-Packed Solid	4
4.	The Structure of Solids	7
5.	Determination of Structure of Compounds and Materials	15
6.	The Defect Solid	18
CHAPTER 2. - THE POINT DEFECT		
1.	Types of Point Defects	25
2.	The Plane Net	27
3.	Non-Stoichiometric Crystals	30
4.	Defect Equation Symbolism	32
5.	Some Applications for Defect Chemistry I. Phosphors II. Bubble Memories	33
6.	Thermodynamics of the Point Defect I. Statistical Mechanics Approach II. Defect Thermodynamics III. Defect Equilibria	35
7.	Defect Equilibria in Various Types of Compounds I. Stoichiometric Binary Compounds of MX II. Defect Concentrations in MX Compounds III. Non-Stoichiometric Binary Compounds IV. Defect Concentrations in MX V. Ionization of Defects	40
8.	Brouwer's Approximation Method	51
9.	Analysis of A Real Crystal using Brouwer's Method - Comparison to the Thermodynamic Method I. The AgBr Crystal with a Divalent Impurity, Cd^{2+} II. Defect Disorder in AgBr - A Thermodynamic Approach	57
10.	The Effects of Purity (and Impurities)	66
CHAPTER 3 - THERMAL ANALYSIS IN SOLID STATE CHEMISTRY		
1.	Scanning Methods	69
2.	Differential Thermal Analysis	70
3.	Differential Scanning Calorimetry	81
4.	Uses of DTA and DSC	83
5.	Thermogravimetry	85

6. Determination of Rate Processes in Solid State Reactions 89
I. Types of Solid State Reactions
II. The Freeman-Carroll Method Applied to DTA Data
III. The Freeman-Carroll Method Applied to TGA Data

CHAPTER 4. SOLID STATE REACTION MECHANISMS

1. Types of Solid State Reactions 95
2. Defining Reaction Conditions 96
3. Heterogeneous Nucleation Rate Processes and Models 98
4. The Tarnishing Reaction 106
5. Fick's Laws of Diffusion 107
6. Diffusion Mechanisms 110
7. Analysis of Diffusion Reactions 113
8. Diffusion in Silicates 116
9. Diffusion Mechanisms Where the Cation Changes Valence State 123
10. Homogeneous Nucleation Processes 125

CHAPTER 5 - GROWTH OF PARTICLES AND PARTICLE PROPERTIES

1. Sequences in Particle Growth 129
2. Sintering and Sintering Processes 130
3. Particle Size 136
4. Particle Distributions 140
5. Particle Distributions and the Binomial Theorem 141
6. Measuring Particle Distributions 144
7. Analysis of Particle Distribution Parameters 147
I. The Histogram
II. Frequency Plots
III. Cumulative Frequency
IV. Log- Normal Probability Method
8. Types of Log Normal Particle Distributions 151
I. Unlimited Particle Distributions
II. Limited Particle Distributions
III. Particle Distributions with Discontinuous Limits
IV. Multiple Particle Distributions
9. A Typical PSD Calculation 156
10. Methods of Measuring PSD 159
I. The Microscope- Visual Counting of Particles
II. Sedimentation Methods
III. Electrical Resistivity
IV. Other Methods of Measuring Particle Size

CHAPTER 6. - GROWTH OF SINGLE CRYSTALS

1. Types of Crystals 169

2.	Furnace Construction	170
3.	Steps in Growing a Single Crystal	173
4.	Czochralski Growth of Single Crystals	175
5.	The Bridgeman-Stockbarger Method for Crystal Growth	187
6.	Zone Melting as a Means for Forming Single Crystals	190
7.	Zone Refining	191
8.	The Impurity Leveling Factor	193
9.	The Verneuil Method of Crystal Growth	197
10.	Molten Flux Growth of Crystals	200
11.	Hydrothermal Growth	202
12.	Vapor Methods Used for Single Crystal Growth	205
13.	Edge Defined Crystal Growth	208
14.	Melting and Stoichiometry	209
15.	Actual Imperfections in Crystals	211
16.	Electronic Properties of Crystals	214
17.	The Calculation of Energy Bands In Crystals	222
18.	Point Defects and the Energy Band Model	225
	Appendix to Chapter 6: Mathematics of the Reciprocal Lattice	228

CHAPTER 7 - OPTICAL PROPERTIES AND LUMINESCENCE

1.	Absorbance, Reflectivity and Transmittance	235
2.	Electronic Aspects of Phosphors	241
	I. Energy Processes in a Phosphor	
	II. Properties Associated with Phosphors	
	A. Notation	
	B. Quantum efficiency	
	C. Decay times	
	D. Band shapes	
3.	Factors Associated with Energy Conversion by Phosphors	250
	I. Energy Dissipation	
	II. Phonons as Quantized Lattice Vibrations	
	III. Phonon Dispersion Equations	
	IV. The Case of the Impurity Activator Center	
	V. Spectroscopic Terminology	
4.	Prediction of Electronic Transition Intensities	261
	I. Einstein Absorption and Emission Coefficients	
	II. Electronic Transition Moments	
	III. Dipole and Multipole Oscillator Strengths	
5.	Mechanisms of Energy Transfer in Solids	267
	I. Radiative Transfer (Radiation Trapping)	
	II. Energy Transfer by Resonance Exchange	
	III. Energy Transfer by a Spatial Process	
	IV. Energy Exchange by Spin Coupling	
	V. Energy Transfer by Non-Resonant Processes	
6.	Summary of Phonon Processes as Related to Phosphors	277

I. Excitation of the Activator Center
II. Excited State Relaxation
III. Center Ready to Emit
APPENDIX to Chapter 7 279

CHAPTER 8 - DESIGN OF PHOSPHORS

1. The Luminescent Center in Inorganic Phosphors 283
2. The Ground State Perturbation Factor 287
3. Design of a Phosphor 289
   I. Choice of the Host Components
   II. Choice of the Activator
   III. Quenchers or "Killers" of Luminescence
4. Factors Affecting Phosphor Efficiencies (Brightness) 299
5. Preparation of Phosphors 307
   I. Phosphor Parameters
      A. Independent Variables
      B. Dependent Variables
      C. The Firing Cycle as a Dependent Variable
      D. Size and Mass Fired
      E. Firing Atmosphere
      F. Effect of Host Structure
      G. Effect of Preparation Method Employed
      H. Ratios of Components and Use of a Flux
6. Commercial Phosphors 322
   I. Cathode-ray Phosphors
   II. Fluorescent Lamp Phosphors
7. Measurement of Optical Properties of Phosphors 331
   I. Brightness Measurements
   II. Emission Band Measurements
   III. Measurement of Quantum Efficiencies
   IV. Specification and Measurement of Color
      A. The Human Eye
      B. The Nature of Chroma
      C. The Standard Observer
8. Color Spaces 352
   I. The Munsell Color Tree
   II. Color Matching and MacAdam Space

CHAPTER 9 - LANTHANIDES AND LASERS

1. History of the Lanthanides 361
2. Chemistry and Separation Techniques 362
3. Rare Earth Energy Levels and Electronic States 366
4. Methods of Calculation of Rare Earth Energy Levels 372
5. Mixed States in Intermediate Coupling 377
6. Experimental Stark States 383
7. Charge Transfer States and 5d Multiplets 390
8. Phonon Assisted Relaxation and Anti-Stokes

	Phosphors	391
9.	Anti-Stokes Phosphors	396
10.	The Solid State Laser	403

CHAPTER 10 - SOLID STATE CHEMISTRY APPLIED TO PHOSPHORS

THE APATITE PHOSPHOR SYSTEM

1	Apatite as a Structure	413
2.	Defect Chemistry of Apatite	419
3.	Preparation and Defect Properties of the $Sr_5(F,Cl)(PO_4)_3$: Sb Phosphor System	421

RARE EARTH ACTIVATED PHOSPHOR SYSTEMS

4.	Preparation of the Rare Earth Phosphors	432
5.	Optical Properties of the Hosts	432
6.	Spectroscopic Properties of the Rare Earth Activated Phosphors	435

SUBJECT INDEX 449
