CONTENTS

PREFACE vii

CHAPTER 1 INTRODUCTION TO MECHATRONICS 1

- 1.1 Introduction 1
- 1.2 Case Study: Modeling and Control of Combustion Engines 13
 - 1.2.1 Diesel Engine Components 14
 - 1.2.2 Engine Control System Components 20
 - 1.2.3 Engine Modeling with Lug Curve 22
 - 1.2.4 Engine Control Algorithms: Engine Speed Regulation Using Fuel Map and a Proportional Control Algorithm 26
- 1.3 Problems 26

CHAPTER 2 CLOSED-LOOP CONTROL 29

- 2.1 Components of a Digital Control System 30
- 2.2 The Sampling Operation and Signal Reconstruction 32
 - 2.2.1 Sampling: A/D Operation 32
 - 2.2.2 Sampling Circuit 32
 - 2.2.3 Mathematical Idealization of the Sampling Circuit 34
 - 2.2.4 Signal Reconstruction: D/A Operation 39
 - 2.2.5 Real-Time Control Update Methods and Time-Delay 42
 - 2.2.6 Filtering and Bandwidth Issues 44
- 2.3 Open-Loop Control versus Closed-Loop Control 46
- 2.4 Performance Specifications for Control Systems 49
- 2.5 Time Domain and s-Domain Correlation of Signals 51
 - 2.5.1 Selection of Pole Locations 52
 - 2.5.2 Step Response of a Second-Order System 52
 - 2.5.3 Standard Filters 56
 - 2.5.4 Steady-State Response 56
- 2.6 Stability of Dynamic Systems 58
 - 2.6.1 Bounded Input–Bounded Output Stability 59

- 2.7 The Root Locus Method 60
- 2.8 Basic Feedback Control Types 64
 - 2.8.1 Proportional Control 67
 - 2.8.2 Derivative Control 68
 - 2.8.3 Integral Control 69
 - 2.8.4 PI Control 70
 - 2.8.5 PD Control 72
 - 2.8.6 PID Control 73
- 2.9 Translation of Analog Control to Digital Control 74
 - 2.9.1 Finite Difference Approximations 76
- 2.10 Problems 78

CHAPTER 3 MECHANISMS FOR MOTION TRANSMISSION 81

- 3.1 Introduction 81
- 3.2 Rotary-to-Rotary Motion Transmission Mechanisms 84
 - 3.2.1 Gears 84
 - 3.2.2 Belt and Pulley 85
- 3.3 Rotary-to-Translational Motion Transmission Mechanisms 87
 - 3.3.1 Lead Screw and Ball Screw Mechanisms 87
 - 3.3.2 Rack-and-Pinion Mechanism 89
 - 3.3.3 Belt and Pulley 90
- 3.4 Cyclic Motion Transmission Mechanisms 91
 - 3.4.1 Linkages 91
 - 3.4.2 Cams 92
- 3.5 Shaft Misalignments and Flexible Couplings 101
- 3.6 Actuator Sizing 102
 - 3.6.1 Inertia Match Between Motor and Load 108
- 3.7 Homogeneous Transformation Matrices 110
- 3.8 Problems 119

CHAPTER 4 MICROCONTROLLERS 123

- 4.1 Embedded Computers versus Nonembedded Computers 123
 - 4.1.1 Design Steps of an Embedded Microcontroller-Based Mechatronic System 125

iv CONTENTS

4.1.2	Microcontroller Development Tools	125	6.4.2	LVDT, Resolver, and Syncro	227
4.1.3	Microcontroller Development Tools for PIC 18F452	127	6.4.3	Encoders	232
4.2	Basic Computer Model	129	6.4.4	Hall Effect Sensors	237
4.3	Microcontroller Hardware and Software: PIC 18F452	133	6.4.5	Capacitive Gap Sensors	238
4.3.1	Microcontroller Hardware	133	6.4.6	Magnetostriction Position Sensors	239
4.3.2	Microprocessor Software	137	6.4.7	Sonic Distance Sensors	240
4.3.3	I/O Peripherals of PIC 18F452	139	6.4.8	Photoelectric Distance and Presence Sensors	241
4.4	Interrupts	145	6.4.9	Presence Sensors: ON/OFF Sensors	243
4.4.1	General Features of Interrupts	145	6.5	Velocity Sensors	245
4.4.2	Interrupts on PIC 18F452	147	6.5.1	Tachometers	245
4.5	Problems	152	6.5.2	Digital Derivation of Velocity from Position Signal	247
CHAPTER 5 ELECTRONIC COMPONENTS FOR MECHATRONIC SYSTEMS 153					
5.1	Introduction	153	6.6	Acceleration Sensors	248
5.2	Basics of Linear Circuits	153	6.6.1	Inertial Accelerometers	249
5.3	Equivalent Electrical Circuit Methods	156	6.6.2	Piezoelectric Accelerometers	252
5.3.1	Thevenin's Equivalent Circuit	157	6.6.3	Strain-Gauge-Based Accelerometers	254
5.3.2	Norton's Equivalent Circuit	157	6.7	Strain, Force, and Torque Sensors	254
5.4	Impedance	160	6.7.1	Strain Gauges	254
5.4.1	Concept of Impedance	160	6.7.2	Force and Torque Sensors	256
5.4.2	Amplifier: Gain, Input Impedance, and Output Impedance	163	6.8	Pressure Sensors	259
5.4.3	Input and Output Loading Errors	164	6.8.1	Displacement-Based Pressure Sensors	260
5.5	Semiconductor Electronic Devices	166	6.8.2	Strain-Gauge-Based Pressure Sensor	261
5.5.1	Semiconductor Materials	166	6.8.3	Piezoelectric-Based Pressure Sensor	262
5.5.2	Diodes	168	6.8.4	Capacitance-Based Pressure Sensor	262
5.5.3	Transistors	172	6.9	Temperature Sensors	263
5.6	Operational Amplifiers	183	6.9.1	Temperature Sensors Based on Dimensional Change	264
5.6.1	Basic Op-Amp	184	6.9.2	Temperature Sensors Based on Resistance	264
5.6.2	Common Op-Amp Circuits	188	6.9.3	Thermocouples	265
5.7	Digital Electronic Devices	201	6.10	Flow Rate Sensors	267
5.7.1	Logic Devices	201	6.10.1	Mechanical Flow Rate Sensors	267
5.7.2	Decoders	202	6.10.2	Differential Pressure Flow Rate Sensors	269
5.7.3	Multiplexer	202	6.10.3	Thermal Flow Rate Sensors: Hot Wire Anemometer	271
5.7.4	Flip-Flops	204	6.10.4	Mass Flow Rate Sensors: Coriolis Flow Meters	272
5.8	Digital and Analog I/O and Their Computer Interface	206	6.11	Humidity Sensors	272
5.9	D/A and A/D Converters and Their Computer Interface	208	6.12	Vision Systems	273
5.10	Problems	214	6.13	Problems	277
CHAPTER 6 SENSORS 217					
6.1	Introduction to Measurement Devices	217	CHAPTER 7 ELECTROHYDRAULIC MOTION CONTROL SYSTEMS 281		
6.2	Measurement Device Loading Errors	220	7.1	Introduction	281
6.3	Wheatstone Bridge Circuit	222	7.1.1	Fundamental Physical Principles	294
6.3.1	Null Method	223			
6.3.2	Deflection Method	223			
6.4	Position Sensors	225			
6.4.1	Potentiometer	225			

7.1.2	Analogy Between Hydraulic and Electrical Components	296	8.2	Solenoids	423
7.1.3	Energy Loss and Pressure Drop in Hydraulic Circuits	299	8.2.1	Operating Principles of Solenoids	423
7.2	Hydraulic Pumps	301	8.2.2	DC Solenoid: Electromechanical Dynamic Model	426
7.2.1	Types of Positive Displacement Pumps	303	8.3	DC Servo Motors and Drives	430
7.2.2	Pump Performance	307	8.3.1	Operating Principles of DC Motors	431
7.2.3	Pump Control	313	8.3.2	Drives for DC Brush-Type and Brushless Motors	438
7.3	Hydraulic Actuators: Hydraulic Cylinder and Rotary Motor	320	8.4	AC Induction Motors and Drives	447
7.4	Hydraulic Valves	324	8.4.1	AC Induction Motor Operating Principles	448
7.4.1	Pressure Control Valves	326	8.4.2	Drives for AC Induction Motors	454
7.4.2	Example: Multifunction Hydraulic Circuit with Poppet Valves	330	8.5	Step Motors	461
7.4.3	Flow Control Valves	332	8.5.1	Basic Stepper Motor Operating Principles	463
7.4.4	Example: A Multifunction Hydraulic Circuit Using Post-Pressure Compensated Proportional Valves	337	8.5.2	Step Motor Drives	468
7.4.5	Directional Flow Control Valves: Proportional and Servo Valves	339	8.6	Switched Reluctance Motors and Drives	471
7.4.6	Mounting of Valves in a Hydraulic Circuit	351	8.6.1	Switched Reluctance Motors	471
7.4.7	Performance Characteristics of Proportional and Servo Valves	352	8.6.2	SR Motor Control System Components: Drive	475
7.5	Sizing of Hydraulic Motion System Components	359	8.7	Linear Motors	478
7.6	EH Motion Axis Natural Frequency and Bandwidth Limit	371	8.8	DC Motor: Electromechanical Dynamic Model	481
7.7	Linear Dynamic Model of a One-Axis Hydraulic Motion System	373	8.8.1	Voltage Amplifier Driven DC Motor	484
7.7.1	Position Controlled Electrohydraulic Motion Axes	375	8.8.2	Current Amplifier Driven DC Motor	485
7.7.2	Load Pressure Controlled Electrohydraulic Motion Axes	378	8.8.3	Steady-State Torque-Speed Characteristics of a DC Motor under Constant Terminal Voltage	486
7.8	Nonlinear Dynamic Model of a Hydraulic Motion System	379	8.8.4	Steady-State Torque-Speed Characteristics of a DC Motor and Current Amplifier	486
7.9	Current Trends in Electrohydraulics	381	8.9	Energy Losses in Electric Motors	488
7.10	Case Studies	384	8.9.1	Resistance Losses	489
7.10.1	Case Study: Multifunction Hydraulic Circuit of a Caterpillar Wheel Loader	384	8.9.2	Core Losses	490
7.11	Problems	388	8.9.3	Friction and Windage Losses	491
			8.10	Problems	491
CHAPTER 8 ELECTRIC ACTUATORS: MOTOR AND DRIVE TECHNOLOGY 393			CHAPTER 9 PROGRAMMABLE LOGIC CONTROLLERS 495		
8.1	Introduction	393	9.1	Introduction	495
8.1.1	Steady-State Torque-Speed Range, Regeneration, and Power Dumping	395	9.2	Hardware Components of PLCs	498
8.1.2	Electric Fields and Magnetic Fields	399	9.2.1	PLC, CPU, and I/O Capabilities	498
8.1.3	Permanent Magnetic Materials	412	9.2.2	Opto-Isolated Discrete Input and Output Modules	502
			9.2.3	Relays, Contactors, Starters	503
			9.2.4	Counters and Timers	505
			9.3	Programming of PLCs	505
			9.3.1	Hardwired Seal-In Circuit	509
			9.4	PLC Control System Applications	510

vi CONTENTS

- 9.5 PLC Application Example: Conveyor and Furnace Control **511**
- 9.6 Problems **514**

CHAPTER 10 PROGRAMMABLE MOTION CONTROL SYSTEMS 515

- 10.1 Introduction **515**
- 10.2 Design Methodology for PMC Systems **520**
- 10.3 Motion Controller Hardware and Software **521**
- 10.4 Basic Single-Axis Motions **522**
- 10.5 Coordinated Motion Control Methods **526**
 - 10.5.1 Point-to-Point Synchronized Motion **527**
 - 10.5.2 Electronic Gearing Coordinated Motion **528**
 - 10.5.3 CAM Profile and Contouring Coordinated Motion **531**
 - 10.5.4 Sensor-Based Real-Time Coordinated Motion **532**
- 10.6 Coordinated Motion Applications **532**
 - 10.6.1 Web Handling with Registration Mark **532**
 - 10.6.2 Web Tension Control Using Electronic Gearing **535**
 - 10.6.3 Smart Conveyors **539**
- 10.7 Problems **544**

APPENDIX A TABLES 547

APPENDIX B MODELING AND SIMULATION OF DYNAMIC SYSTEMS 549

- B.1 Modeling of Dynamic Systems **549**
- B.2 Complex Variables **550**
- B.3 Laplace Transforms **552**
 - B.3.1 Definition of Laplace Transform **552**
 - B.3.2 Properties of the Laplace Transform **554**
 - B.3.3 Laplace Transforms of Some Common Functions **558**
 - B.3.4 Inverse Laplace Transform: Using Partial Fraction Expansions **562**

- B.4 Fourier Series, Fourier Transforms, and Frequency Response **566**
 - B.4.1 Basics of Frequency Response: Meaning of Frequency Response **571**
 - B.4.2 Relationship Between the Frequency Response and Transfer Function **572**
 - B.4.3 s-Domain Interpretation of Frequency Response **573**
 - B.4.4 Experimental Determination of Frequency Response **574**
 - B.4.5 Graphical Representation of Frequency Response **574**
- B.5 Transfer Function and Impulse Response Relation **574**
- B.6 Convolution **579**
- B.7 Review of Differential Equations **581**
 - B.7.1 Definitions **581**
 - B.7.2 System of First-Order O.D.E.s **581**
 - B.7.3 Existence and Uniqueness of the Solution of O.D.E.s **582**
- B.8 Linearization **583**
 - B.8.1 Linearization of Nonlinear Functions **583**
 - B.8.2 Linearization of Nonlinear First-Order Differential Equations **585**
 - B.8.3 Linearization of Multidimensional Nonlinear Differential Equations **586**
- B.9 Numerical Solution of O.D.E.s and Simulation of Dynamic Systems **588**
 - B.9.1 Numerical Methods for Solving O.D.E.s **589**
 - B.9.2 Numerical Solution of O.D.E.s **589**
 - B.9.3 Time Domain Simulation of Dynamic Systems **591**
- B.10 Details of the Solution for Example on Page 162: RL and RC Circuits **600**
- B.11 Problems **604**
