## Preface

|  |    |
|--|----|
| <b>Introduction</b> . . . . .                                    | 1  |
| § 0.1. Problems of mathematical control theory . . . . .         | 1  |
| § 0.2. Specific models . . . . .                                 | 3  |
| Bibliographical notes . . . . .                                  | 8  |
| <br>   |    |
| <b>PART I. Elements of classical control theory</b> . . . . .    | 10 |
| <br>   |    |
| <b>Chapter 1. Controllability and observability</b> . . . . .    | 10 |
| § 1.1. Linear differential equations . . . . .                   | 10 |
| § 1.2. The controllability matrix . . . . .                      | 14 |
| § 1.3. Rank condition . . . . .                                  | 17 |
| § 1.4. A classification of control systems . . . . .             | 21 |
| § 1.5. Kalman decomposition . . . . .                            | 23 |
| § 1.6. Observability . . . . .                                   | 25 |
| Bibliographical notes . . . . .                                  | 27 |
| <br>   |    |
| <b>Chapter 2. Stability and stabilizability</b> . . . . .        | 28 |
| § 2.1. Stable linear systems . . . . .                           | 28 |
| § 2.2. Stable polynomials . . . . .                              | 32 |
| § 2.3. The Routh theorem . . . . .                               | 34 |
| § 2.4. Stability, observability, and Liapunov equation . . . . . | 40 |
| § 2.5. Stabilizability and controllability . . . . .             | 43 |
| § 2.6. Detectability and dynamical observers . . . . .           | 46 |
| Bibliographical notes . . . . .                                  | 49 |
| <br>   |    |
| <b>Chapter 3. Realization theory</b> . . . . .                   | 50 |
| § 3.1. Impulse response and transfer functions . . . . .         | 50 |
| § 3.2. Realizations of the impulse response function . . . . .   | 54 |
| § 3.3. The characterization of transfer functions . . . . .      | 60 |
| Bibliographical notes . . . . .                                  | 61 |

|  |            |
|--|------------|
| <b>Chapter 4. Systems with constraints . . . . .</b>                               | <b>62</b>  |
| § 4.1. Bounded sets of parameters . . . . .  | 62         |
| § 4.2. Positive systems . . . . .  | 64         |
| Bibliographical notes . . . . .  | 72         |
| <br>   |            |
| <b>PART II. Nonlinear control systems . . . . .</b>                                | <b>73</b>  |
| <br>   |            |
| <b>Chapter 1. Controllability and observability of nonlinear systems . . . . .</b> | <b>73</b>  |
| § 1.1. Nonlinear differential equations . . . . .                                  | 73         |
| § 1.2. Controllability and linearization . . . . .                                 | 77         |
| § 1.3. Lie brackets . . . . .  | 81         |
| § 1.4. The openness of attainable sets . . . . .                                   | 84         |
| § 1.5. Observability . . . . .   | 88         |
| Bibliographical notes . . . . .  | 91         |
| <br>   |            |
| <b>Chapter 2. Stability and stabilizability . . . . .</b>                          | <b>92</b>  |
| § 2.1. Differential inequalities . . . . .   | 92         |
| § 2.2. The main stability test . . . . .   | 95         |
| § 2.3. Linearization . . . . .   | 100        |
| § 2.4. The Liapunov function method . . . . .                                      | 103        |
| § 2.5. La Salle's theorem . . . . .  | 105        |
| § 2.6. Topological stability criteria . . . . .                                    | 108        |
| § 2.7. Exponential stabilizability and the robustness problem . . . . .            | 112        |
| § 2.8. Necessary conditions for stabilizability . . . . .                          | 116        |
| § 2.9. Stabilization of the Euler equations . . . . .                              | 117        |
| Bibliographical notes . . . . .  | 120        |
| <br>   |            |
| <b>Chapter 3. Realization theory . . . . .</b>                                     | <b>121</b> |
| § 3.1. Input-output maps . . . . .   | 121        |
| § 3.2. Partial realizations . . . . .  | 122        |
| Bibliographical notes . . . . .  | 126        |
| <br>   |            |
| <b>PART III. Optimal control . . . . .</b>   | <b>127</b> |
| <br>   |            |
| <b>Chapter 1. Dynamic programming . . . . .</b>                                    | <b>127</b> |
| § 1.1. Introductory comments . . . . .   | 127        |
| § 1.2. Bellman's equation and the value function . . . . .                         | 128        |
| § 1.3. The linear regulator problem and the Riccati equation . . . . .             | 133        |
| § 1.4. The linear regulator and stabilization . . . . .                            | 136        |
| Bibliographical notes . . . . .  | 141        |

|   |            |
|---|------------|
| <b>Chapter 2. Dynamic programming for impulse control . . . . .</b> | <b>142</b> |
| § 2.1. Impulse control problems . . . . .                           | 142        |
| § 2.2. An optimal stopping problem . . . . .                        | 144        |
| § 2.3. Iterations of convex mappings . . . . .                      | 145        |
| § 2.4. The proof of Theorem 2.1 . . . . .                           | 146        |
| Bibliographical notes . . . . .                                     | 151        |
| <b>Chapter 3. The maximum principle . . . . .</b>                   | <b>152</b> |
| § 3.1. Control problems with fixed terminal time . . . . .          | 152        |
| § 3.2. An application of the maximum principle . . . . .            | 155        |
| § 3.3. The maximum principle for impulse control problems . . . . . | 157        |
| § 3.4. Separation theorems . . . . .                                | 162        |
| § 3.5. Time-optimal problems . . . . .                              | 164        |
| Bibliographical notes . . . . .                                     | 169        |
| <b>Chapter 4. The existence of optimal strategies . . . . .</b>     | <b>170</b> |
| § 4.1. A control problem without an optimal solution . . . . .      | 170        |
| § 4.2. Fillipov's theorem . . . . .                                 | 171        |
| Bibliographical notes . . . . .                                     | 175        |
| <b>PART IV. Infinite dimensional linear systems . . . . .</b>       | <b>176</b> |
| <b>Chapter 1. Linear control systems . . . . .</b>                  | <b>176</b> |
| § 1.1. Introduction . . . . .                                       | 176        |
| § 1.2. Semigroups of operators . . . . .                            | 177        |
| § 1.3. The Hille–Yosida theorem . . . . .                           | 185        |
| § 1.4. Phillips' theorem . . . . .                                  | 188        |
| § 1.5. Important classes of generators and Lions' theorem . . . . . | 190        |
| § 1.6. Specific examples of generators . . . . .                    | 194        |
| § 1.7. The integral representation of linear systems . . . . .      | 202        |
| Bibliographical notes . . . . .                                     | 205        |
| <b>Chapter 2. Controllability . . . . .</b>                         | <b>206</b> |
| § 2.1. Images and kernels of linear operators . . . . .             | 206        |
| § 2.2. The controllability operator . . . . .                       | 209        |
| § 2.3. Various concepts of controllability . . . . .                | 212        |
| § 2.4. Systems with self-adjoint generators . . . . .               | 213        |
| § 2.5. Controllability of the wave equation . . . . .               | 218        |
| Bibliographical notes . . . . .                                     | 220        |

|   |            |
|---|------------|
| <b>Chapter 3. Stability and stabilizability . . . . .</b>             | <b>221</b> |
| § 3.1. Various concepts of stability . . . . .                        | 221        |
| § 3.2. Liapunov's equation . . . . .                                  | 226        |
| § 3.3. Stabilizability and controllability . . . . .                  | 227        |
| Bibliographical notes . . . . .                                       | 231        |
| <b>Chapter 4. Linear regulators in Hilbert spaces . . . . .</b>       | <b>232</b> |
| § 4.1. Introduction . . . . .   | 232        |
| § 4.2. The operator Riccati equation . . . . .                        | 234        |
| § 4.3. The finite horizon case . . . . .                              | 236        |
| § 4.4. The infinite horizon case: Stabilizability and detectability . | 240        |
| Bibliographical notes . . . . .                                       | 243        |
| <b>Appendix . . . . .</b>   | <b>244</b> |
| § A.1. Metric spaces . . . . .  | 244        |
| § A.2. Banach spaces . . . . .  | 245        |
| § A.3. Hilbert spaces . . . . .                                       | 247        |
| § A.4. Bochner's integral . . . . .                                   | 248        |
| § A.5. Spaces of continuous functions . . . . .                       | 250        |
| § A.6. Spaces of measurable functions . . . . .                       | 250        |
| <b>References . . . . .</b>   | <b>252</b> |
