Preface	ix
List of figures	xiii
List of tables	xvii
List of symbols	xix
1 Introduction	1
1.1 Free-surface flows in nature and industry	1
1.2 Scope of the book	5
2 Fundamentals of fluid mechanics	9
2.1 Main concepts	9
2.1.1 Physical properties of liquids and gases	9
2.1.2 The continuum approximation: density and velocity	11
2.1.3 The continuum approximation: forces and stresses	15
2.1.4 Eulerian and Lagrangian description of motion	20
2.2 Governing equations	24
2.2.1 Conservation of mass	25
2.2.2 Equation of motion. Stress tensor	28
2.2.3 Conservation of angular momentum. Symmetry of stress tensor	32
2.2.4 Ideal fluid	34
2.2.5 Elements of theory of deformation	36
2.2.6 Viscous incompressible liquid	41
2.3 Elements of thermodynamics	52
2.3.1 General concepts	52
2.3.2 Application to fluid	55
2.4 Classical boundary conditions	64
2.4.1 Boundaries and boundary conditions	64
2.4.2 Kinematic and dynamic conditions on liquid-fluid interfaces	66
2.4.3 Conditions on solid boundaries	75
2.4.4 Conditions at three-phase contact lines	79
2.5 Physically meaningful solutions and paradoxes of modelling	87
2.5.1 ‘Standard model’	87

2.5.2	Analysis of results	90
2.5.3	Paradoxes of modelling	93
3	Moving contact lines: An overview	97
3.1	Essence of the problem	97
3.1.1	Spreading of liquids on solids	97
3.1.2	Liquid-liquid displacement	102
3.1.3	Summary	105
3.2	Experimental observations	105
3.2.1	Preliminary remarks	105
3.2.2	Flow kinematics	108
3.2.3	Dynamic contact angle	117
3.2.4	Summary of experiments	142
3.3	Molecular dynamics simulations	143
3.4	Review of theories	145
3.4.1	Slip models	146
3.4.2	Models developed for dynamic wetting by thin films	161
3.4.3	Diffuse-interface models	167
3.4.4	Other models	171
3.4.5	Summary	173
3.5	The key to the moving contact-line problem	173
4	Boundary conditions on forming interfaces	177
4.1	Modelling of interfaces	177
4.2	Conservation laws	185
4.3	Liquid-gas and liquid-solid interfaces	190
4.3.1	Dissipative mechanisms	192
4.3.2	Estimates and further simplifications	195
4.3.3	Surface equation of state	198
4.3.4	The simplest (irreducible) model	201
4.3.5	Conditions at contact lines	206
4.4	Liquid-liquid interfaces	211
4.4.1	Conditions at contact lines	214
4.5	Summary	217
4.6	Open questions and possible generalizations	218
5	Moving contact lines: Mathematical description	221
5.1	Flow in the immediate vicinity of a moving contact line	221
5.1.1	Problem formulation	221
5.1.2	Asymptotics as $r \rightarrow 0$	224
5.1.3	Implications for numerical computations	228
5.1.4	Qualitative illustration of the asymptotics	229
5.1.5	Summary of the near-field asymptotic analysis	231
5.2	Dynamic wetting at small capillary numbers	232
5.2.1	Dynamic contact angle	235

5.2.2	Forces near the moving contact line	239
5.2.3	Flow-induced Marangoni effect	241
5.3	De-wetting and re-wetting	242
5.3.1	Liquid spreading over a pre-wet surface	243
5.3.2	Receding contact lines	245
5.4	Comparison with experiments and some estimates	247
5.5	Examples: flows in a quasi-static regime	254
5.5.1	Spreading of drops on solid substrates	255
5.5.2	Bubble growth on a plate	259
5.6	Dynamic wetting at finite capillary numbers	262
5.6.1	Problem formulation	262
5.6.2	The effect of the flow field/geometry on dynamic contact angle	264
5.6.3	Flow field	274
5.7	Liquid-liquid displacement	276
5.8	Summary and outstanding modelling issues	279
5.8.1	Dynamic wetting of imperfect substrates	280
6	Cusps, corners and coalescence of drops	287
6.1	Singularities of free-surface curvature in experiments	287
6.2	Conventional modelling	290
6.2.1	Solution with a presumed singularity	290
6.2.2	Solution with an emerging singularity	294
6.2.3	The paradox of cusping	299
6.3	'Missing' physics	300
6.3.1	Essential factors and additional influences	300
6.3.2	Singularity of curvature as a contact line in the interface disappearance process	301
6.4	Singularity-free solution: cusp or corner?	304
6.4.1	Problem formulation	304
6.4.2	Near-field asymptotics	306
6.4.3	Numerical and experimental implications	313
6.4.4	Summary	314
6.5	Coalescence of drops	315
6.5.1	Coalescence in the standard model	317
6.5.2	Local self-similarity and the origin of the singularity	324
6.5.3	Singularity-free description	327
6.5.4	Computational and experimental aspects	337
6.5.5	Summary	338
7	Breakup of jets and rupture of films	341
7.1	Background	341
7.2	Drop formation: emerging singularity	343
7.2.1	Slender-jet approximation	343
7.2.2	Similarity solutions	347

7.2.3	Numerical results	350
7.3	Experiments on capillary pinch-off	352
7.4	'Missing' physics and its qualitative verification	360
7.5	Axisymmetric capillary pinch-off: singularity-free solution	364
7.5.1	Slender-jet approximation	365
7.5.2	Further simplifications: estimates for Q_1 and $\bar{\beta}$	367
7.5.3	Flow regimes	369
7.6	Pinch-off from a molecular viewpoint	378
7.7	Rupture of films	381
7.7.1	Macroscopic mechanism	382
7.7.2	Mesosopic films	389
7.8	Summary	395
A	Elements of vector and tensor calculus	397
B	Equations of fluid mechanics in curvilinear coordinates	407
C	Complex representation of biharmonic functions	411
D	Physical properties of some fluids	413
	References	415
	Index of Authors	445
	Subject Index	453
