

An Introduction to Nanoscience and Nanotechnology

Alain Nouailhat

iSTE

 **WILEY**

Table of Contents

Foreword	xiii
Acknowledgements	xv
Preface	xvii
Chapter 1. What are Nanos?	1
1.1. What are we talking about?	3
1.2. References.	7
1.2.1. Two basic facts	7
1.2.2. Two approaches	9
1.2.3. Two key points	11
1.3. Some bonus material for economists.	13
Chapter 2. Some Science to Get You Started.	15
2.1. Quantum physics	17
2.1.1. From the traditional world to the quantum world	17
2.1.2. Two fundamental concepts.	19
2.1.2.1. Wave-corpucle duality	19
2.1.2.2. Probability in the quantum world	21

2.2. The key players	22
2.2.1. The electron	22
2.2.1.1. The cornerstone of matter	22
2.2.1.2. Electronic states	23
2.2.1.3. The quantification of energy	24
2.2.1.4. Bonds	25
2.2.2. The photon	27
2.2.2.1. The wave.	27
2.2.2.2. The energy grain	30
2.3. Molecules	34
2.3.1. From the smallest molecule to the largest and their spectacular properties	34
2.3.2. Functionality	35
2.4. Solid matter	36
2.4.1. Insulators or conductors.	36
2.4.2. Semi-conductors	37
2.4.2.1. Silicon crystal.	37
2.4.2.2. Electrons and holes.	40
2.4.2.3. Junctions	40
2.4.3. Nanomaterials	41
2.5. Quantum boxes: between the atom and the crystal.	41
2.6. Some bonus material for physicists.	42
2.6.1. Luminescence	42
2.6.2. The laser device.	44

Chapter 3. The Revolution in Techniques Used in

Observation and Imagery.	51
3.1. Observing with photons	53
3.1.1. The optical microscope in visible light	53
3.1.2. X-ray machines	54
3.2. Observing with electrons	55
3.2.1. The transmission electron microscope (TEM)	55
3.2.2. The scanning electron microscope (SEM)	56

3.3. Touching the atoms	58
3.4. Observing how our brain functions.	60
3.4.1. Nuclear magnetic resonance	60
3.4.2. Functional magnetic resonance imaging	61
3.5. Some bonus material for researchers.	62
Chapter 4. The Marriage of Software and Hardware.	69
4.1. Small is beautiful	71
4.2. Miniaturization.	71
4.3. Integration.	72
4.3.1. The silicon planet.	72
4.3.2. An expanding universe	78
4.4. Programs.	82
4.5. Some bonus material for mathematicians.	83
Chapter 5. Mechanics of the Living World	89
5.1. Proteins – molecules with exceptional properties.	93
5.1.1. The program of cellular production	94
5.1.2. Reading instructions and the production of proteins.	95
5.1.3. How does it work?	99
5.1.4. Molecular disfunctioning.	100
5.1.4.1. External causes	100
5.1.4.2. Internal causes	100
5.2. Intervention of human beings	101
5.2.1. Medication	102
5.2.2. The creation of those famous GMOs (Genetically Modified Organisms).	102
5.2.3. Manipulation of embryos.	103
5.3. Some bonus material for biologists.	103

Chapter 6. The Uses of Nanotechnologies	107
6.1. New objects	109
6.1.1. Carbon in all its states	109
6.1.1.1. Nanodiamonds	110
6.1.1.2. Carbon nanotubes	110
6.1.2. A handful of gold atoms	116
6.2. Ground-breaking products	116
6.2.1. Surface treatment	117
6.2.2. Incorporation in a composite environment.	119
6.3. From micro to nanosystems	120
6.3.1. Miniature components – MEMS	120
6.3.1.1. A print head for inkjet printers	120
6.3.1.2. Airbags	122
6.3.1.3. A microlens for miniaturized optics	123
6.3.1.4. Magnetic disk readheads: quantum nanostructures.	124
6.3.2. Microsources of energy: key points for embedded systems	124
6.3.3. Micromotors	125
6.4. A global integration.	132
6.5. Some bonus material for engineers.	139
Chapter 7. Nanos are Changing the World	143
7.1. A simulation or a virtual world	145
7.2. Understanding nature.	151
7.2.1. Understanding energy	151
7.2.2. Understanding materials	152
7.2.3. Understanding information.	154
7.2.4. Understanding life	156
7.3. Watch out for nanomedicine	159
7.4. Nanosciences and our future	161
7.5. Essential ethics.	165
7.6. Conclusion	169

Appendices	173
Appendix A. European Parliament Resolution on Nanosciences and Nanotechnologies	175
Appendix B. Eight Guidelines on Nanotechnologies Issued by the CNRS Ethics Committee	185
Abbreviations	191
Bibliography	195
Figures	197
Index	205
