CONTENTS

FOREWORD	iii
PREFACE	v
1 JETCUTTING AND ITS APPLICATIONS	1
1.1 Using Liquid Jet as a Cutting Tool	1
1.2 Classification of Methods and Schemes of Jetcutting	4
2 STRUCTURE AND HYDRODYNAMICS OF HIGH-PRESSURE NARROW LIQUID JETS	11
2.1 Principal Parameters of High-Pressure Narrow Jets	11
2.2 Elements of Jet Formation	17
2.3 Effect of Flow Parameters in Feeding Channels of Hydraulic Devices on Jet Structure	27
2.4 Effect of Structure, Parameters, and Connection of Nozzle Elements on Jet Coherence	31
3 MECHANICS OF MATERIAL MICROFRACTURE DURING JETCUTTING	35
3.1 General Physical Model of Jetcutting	35
3.2 Liquid Drop Deformation During Interaction with a Machined Material	37
3.3 Failure of Machined Material Subject to the Action of a Liquid Jet	40
3.4 Effect of Fluid on Failure Process of Machined Material	46
3.5 Destruction of Machined Surface Imperfections Under Internal Stresses (Compression, Bending, Shear)	52
4 FORCE PARAMETERS OF JETCUTTING	57
4.1 Distribution of Momentum in a Supersonic Liquid Jet	57
4.2 Relation Between Jet Force on Material Surface and its Outflow Parameters	63
4.3 Determination of Optimum Parameters of Liquid Jet Acting on a Material Surface	65
4.4 Effect of Jet Outflow Parameters on Cutting Force	67
4.5 Effects of Machined Material Thickness, Its Physical and Mechanical Properties, and Speed of Feed on Cutting Force	69

5	TECHNOLOGICAL PARAMETERS OF JETCUTTING	71
5.1	Relationships Between Conditions and Parameters of Jetcutting	71
5.2	Effect of Number of Passes on Productivity and Quality of Jetcutting	74
5.3	Effect on Jetcutting of Distance Between Nozzle and Target Material	78
5.4	Choice of Material Machinability Criteria Based on Material Strength Characteristics	81
5.5	Relation Between Jetcutting Productivity and Jet Outflow Parameters	85
5.6	Effect of Physical and Mechanical Properties of Machined Material and Its Thickness on Jetcutting Productivity . . .	87
5.7	Effect of Working Fluid Composition on Jetcutting Effectiveness	89
5.8	Abrasive-Liquid Machining of Materials	96
6	JETCUTTING EQUIPMENT	113
6.1	High-Pressure Systems Based on Special Pumps	113
6.2	High-Pressure Systems Based on Boosters	121
6.3	Types of High-Pressure Cylinders	135
6.4	Types of Seals for High-Pressure Machines	143
6.5	Calculations of Air-Tightness and Durability of Seals	150
6.6	Materials Used for High-Pressure System Elements	156
6.7	Equipment and Details of High-Pressure Machines	164
6.8	Safety Engineering for Work with Jetcutting Equipment . .	185
