<b>1</b>	<b>Nature of Surfactants</b>	<b>1</b>
1.1	Introduction to surfactants	1
1.2	Natural surfactants	1
1.3	Synthetic surfactants	3
1.4	Types of surfactant	4
1.4.1	Hydrophilic groups	4
1.4.2	Hydrophobic groups	5
1.5	Surface activity	6
1.5.1	Self-association	7
1.5.2	The hydrophobic effect	9
	References	11
<b>2</b>	<b>Adsorption at liquid interfaces</b>	<b>13</b>
2.1	Introduction	13
2.2	Direct measurement of amount adsorbed	13
2.3	Adsorption studied via surface and interfacial tension measurement	14
2.4	Adsorption of ionic surfactants	17
2.4.1	No added electrolyte	17
2.4.2	Ionic surfactant with excess electrolyte	17
2.5	Equations of state for adsorbed surfactants	18
2.6	Adsorption at the liquid/liquid interface	20
2.7	Ultra-low interfacial tensions	23
2.7.1	Prediction of emulsion type from packing geometry	24
2.7.2	Phase inversion	25
2.7.3	Tensions at curved and planar interfaces	26
2.7.4	Interactions between adsorbed monolayers	27
2.7.5	Practical applications of ultra-low tension systems	28
2.8	Physical properties of adsorbed monolayers	28
2.9	Dynamic aspects of adsorbed surfactants	29
2.9.1	The Marangoni effect	30
	References	31
<b>3</b>	<b>Insoluble monolayers</b>	<b>33</b>
3.1	Introduction	33
3.2	Historical background	33
3.2.1	The Langmuir trough and its origin	34
3.2.2	Use of the Langmuir trough	35
3.3	Phase changes and types of film	36
3.3.1	Gaseous films	37
3.3.2	The LE + G region	38
3.3.3	The liquid-expanded region	39
3.3.4	The transition region	40

3.3.5	The liquid-condensed region	41
3.3.6	The solid region	42
3.4	Ionised monolayers	42
3.4.1	Effect of polyvalent counterions	44
3.5	X-ray and neutron scattering	44
3.5.1	Horizontal scattering	45
3.5.2	Vertical scattering	46
3.5.3	Neutron scattering	49
3.6	Dynamic effects	51
3.6.1	Interfacial shear rheology	52
3.6.2	Interfacial dilatational rheology	53
3.6.3	Measurement of surface shear viscosity for insoluble monolayers	53
3.6.4	Measurement of surface dilatational rheological properties	54
3.7	Practical applications of insoluble monolayers	55
	References	57
<b>4</b>	<b>Langmuir–Blodgett multilayers</b>	<b>59</b>
4.1	Introduction	59
4.2	Historical background	59
4.3	Types of monolayer deposition	62
4.3.1	X-, Y- and Z-films	62
4.3.2	Incomplete deposition	64
4.3.3	Asymmetrical films	64
4.3.4	Polymeric systems	65
4.4	Structure of multilayers	66
4.4.1	Characterisation by simple techniques	67
4.4.2	Low-angle X-ray diffraction	68
4.4.3	Spectroscopic methods	70
4.4.4	Long-range order and homogeneity	70
4.5	Applications of LB films	71
4.5.1	Devices exploiting the insulating properties of the film	72
4.5.2	Applications combining ultra-thin property with useful chemistry	72
4.5.3	Multilayers requiring non-centrosymmetrical structures	73
4.5.4	Supermolecular assemblies and molecular electronics	74
4.5.5	Sensors	76
4.6	Self-assembly systems	77
4.6.1	Self-assembly monolayers	77
4.6.2	Self-assembly multilayers	78
	References	79
<b>5</b>	<b>Micelle formation</b>	<b>82</b>
