D. L. Mills

Nonlinear Optics

Basic Concepts

With 32 Figures

Springer-Verlag
Berlin Heidelberg New York
London Paris Tokyo
Hong Kong Barcelona
Budapest

Contents

1. Introductory Remarks 1
Problems 6

2. Linear Dielectric Response of Matter 7
2.1 Frequency Dependence of the Dielectric Tensor 11
2.2 Wave Vector Dependence of the Dielectric Tensor 27
2.3 Electromagnetic Waves in Anisotropic Dielectrics 30
Problems 33

3. Nonlinear Dielectric Response of Matter 37
3.1 Frequency Variation of the Nonlinear Susceptibilities 39
3.2 Wave Vector Dependence of the Nonlinear Susceptibilities 45
3.3 Remarks on the Order of Magnitude of the Nonlinear Susceptibilities 47
Problems 49

4. Basic Principles of Nonlinear Wave Interactions: Second Harmonic Generation and Four Wave Mixing 51
4.1 Perturbation Theoretic Analysis of Second Harmonic Generation 51
4.2 Methods of Achieving the Phase Matching Condition 57
4.3 Evolution of the Second Harmonic Wave under Phase Matched Conditions 59
4.4 Other Examples of Nonlinear Wave Interactions 63
4.4.1 Four Wave Mixing Spectroscopy 63
4.4.2 Optical Phase Conjugation 69
Problems 71

5. Inelastic Scattering of Light from Matter: Stimulated Raman and Brillouin Scattering 73
5.1 Quantum Theory of Raman Scattering 77
5.2 Stimulated Raman Effect 82
5.3 Contribution to Four Wave Mixing from the Raman Nonlinearity 84

5.4 Brillouin Scattering of Light 87
Problems 91

6. Interaction of Atoms with Nearly Resonant Fields: Self-Induced Transparency 93
6.1 Description of the Wave Function under Near Resonant Conditions 94
6.2 Bloch Equations: Power Broadening and Saturation Effects in Absorption Spectra 101
6.3 Self-Induced Transparency 107
6.4 Area Theorem 112
6.5 Sine-Gordon Equation 114
Problems 117

7. Self-Interaction Effects in One-Dimensional Wave Propagation: Solitons in Optical Fibers and in Periodic Structures 119
7.1 Normal Modes of Optical Fibers 121
7.2 Nonlinear Schrödinger Equation 128
7.3 Linear Theory of Pulse Propagation in a Dispersive Medium: Application to Optical Fibers 132
7.4 Solitons and the Nonlinear Schrödinger Equation 135
7.5 Gap Solitons in Nonlinear Periodic Structures 139
Problems 153

8. Chaos 155
8.1 Duffing Oscillator: Transition to Chaos 156
8.2 Routes to Chaos 161
8.3 Experimental Observations of Chaos in Optical Systems 162
Problems 165

Appendix A: Structure of the Wave Vector and Frequency Dependent Dielectric Tensor 167

Appendix B: Aspects of the Sine-Gordon Equation 175
