1 Introduction	1
1.1 Overview	1
1.1.1 History	1
1.1.2 The Role of PIV in Fluid Mechanics	3
1.2 PIV Fundamentals	5
1.2.1 Basic Planar System	5
1.2.2 Illumination	6
1.2.3 Camera and Imaging	6
1.2.4 Particles	13
1.2.5 Image Digitization	16
1.2.6 Image Processing	17
1.2.7 Displacement Interrogation	18
1.2.8 Validating the Interrogation	28
1.2.9 Estimating the Eulerian Velocity Vector Field	29
1.2.10 Fluid Kinematics from Multipoint Data	31
1.2.11 Flow Statistics	33
1.3 Accuracy, Resolution, and Performance of PIV	34
1.4 Stereographic PIV	35
1.5 Three-Dimensional Velocity in Volumes	36
2 Particles	40
2.1 Particle Dynamics	40
2.2 Errors Due to Particle Slip	44
2.2.1 Settling Velocity	44
2.2.2 Frequency Response	45
2.2.3 Estimating the Slip Error for High-Fidelity Particles	48
2.2.4 Particle Concentration Effects	49

2.3	Light Scattering by Particles	50
2.3.1	Lorenz–Mie Scattering Theory	50
2.3.2	Heterogeneous Particles	56
2.3.3	Fluorescent Particles	57
2.4	Seeding Particles for PIV	59
2.4.1	Selection Criteria	59
2.4.2	Particles for Liquids	60
2.4.3	Particles for Microfluidic Flows of Liquids	61
2.4.4	Particles for Gases	61
2.4.5	Seeding Solids	66
2.5	Multiple-Particle Statistics	66
2.5.1	Random-Point Model	66
2.5.2	Poisson Statistics	67
2.5.3	Correlation of the Particle Patterns	68
2.5.4	Brownian Motion	70
2.5.5	Displacement Statistics with Negligible Brownian Motion	70
2.5.6	Velocity Gradients	71
3	Imaging	75
3.1	Geometric Imaging	75
3.1.1	Elementary Imaging	75
3.1.2	Aberrations	77
3.1.3	Compound Lenses and Imaging Systems	80
3.1.4	Geometric Imaging at Oblique Angles	83
3.1.5	Image Mapping	86
3.1.6	Calibration	93
3.2	Diffraction-Limited Imaging	95
3.2.1	Single-Point Imaging	95
3.2.2	Distributed Objects	97
3.2.3	Out-of-Focus Images of a Point	99
3.2.4	Exact Form of a Particle Image	100
3.2.5	Approximate Form of a Particle Image	100
3.3	Images of Multiple Particles	102
3.3.1	Incoherent Illumination	103
3.3.2	Coherent Illumination	105
3.4	Image Statistics	109
3.4.1	Particle Image Mode	109
3.4.2	Speckle Mode	113
3.4.3	Image Contrast	119
3.4.4	Image Intensity Distribution	123
3.5	Image Recording	128
3.5.1	Exposure	128
3.5.2	Photographic Media	131
3.5.3	Solid-State Image Detectors	134
3.5.4	Noise	139
3.6	Holographic Imaging	140
3.6.1	Recording	140
3.6.2	Reconstruction of the Object	143

4 Pixelization	146
4.1 Spatial Discretization	146
4.2 Minimum Sampling Rate	148
4.3 Quantization	151
4.4 Image Statistics of Discrete PIV Images	153
4.5 Image Representation and Compression	156
4.5.1 Pixels and Bit Planes	157
4.5.2 Image Transforms	158
4.5.3 Image Compression	160
5 Particle Image Velocimetry Systems	165
5.1 Illumination and Light Sheet Formation	165
5.1.1 Pulsed Laser Systems	167
5.1.2 Light Sheet Formation	171
5.2 Timing and Synchronization	176
5.3 Stereoscopic Systems	178
5.3.1 Optical Configuration	178
5.3.2 Reconstruction	184
5.3.3 Calibration for Stereo Systems	189
5.3.4 Typical Results	194
5.4 Multiplane Systems	195
5.5 Scanning-Plane Systems	200
5.6 Microscopic Systems	205
5.6.1 Epifluorescent Imaging	206
5.6.2 Total Internal Reflection Fluorescence Imaging	212
5.6.3 Confocal Imaging	213
5.6.4 Stereo Micro-PIV	214
5.6.5 Long-Distance Micro-PIV	217
5.7 Photogrammetric Systems	218
5.8 Tomographic Systems	222
5.9 Holographic Systems	230
5.10 Multiphase Systems	236
6 Digital Image Processing	241
6.1 Image Restoration and Image Enhancement	241
6.1.1 Image Background Removal	242
6.1.2 Contrast Enhancement	246
6.1.3 Filtering in the Spatial-Frequency Domain	254
6.1.4 Particle Image Restoration	256
6.2 Image Segmentation	258
6.3 Binary Image Processing	262
6.3.1 Logical Operations	263
6.3.2 Morphological Image Processing	263
7 Low Image Density	268
7.1 Recording Strategies	268
7.1.1 Particle Streak Velocimetry	268
7.1.2 Pulsed Light Velocimetry	271

7.2	Detection of Particle Images	272
7.2.1	Threshold Detection	272
7.2.2	Minimum Separation Distance	276
7.3	Estimation of the Particle Image Location	280
7.3.1	Centroid Estimation	280
7.3.2	Least Squares Estimation	285
7.3.3	Estimation Precision	289
7.4	Interrogation Strategies	294
7.5	Optimization and Performance	300
7.5.1	Detection Probability	300
7.5.2	Measurement Reliability	304
7.5.3	Displacement Bias	306
7.5.4	Qualified Search	307
7.5.5	Multiframe Tracking	309
7.5.6	Biased Search	311
7.5.7	Dynamic Ranges	313
8	High Image Density	317
8.1	Interrogation	317
8.2	Interrogation by Spatial Correlation Analysis	319
8.2.1	Single-Exposure Double-Frame Recording	319
8.2.2	Double-Exposure Single-Frame Recording	324
8.2.3	Multiple-Exposure Single-Frame Recording	329
8.2.4	Correlation Averaging	332
8.2.5	Young's Fringe Analysis	337
8.3	Correlation Peak Detection	342
8.3.1	Image Density	343
8.3.2	In-Plane Motion	344
8.3.3	Out-of-Plane Motion	344
8.3.4	Spatial Gradients	345
8.3.5	Peak Detectability	346
8.3.6	Design Rules	350
8.3.7	Measurement Volume	352
8.4	Correlation Peak Centroid	353
8.4.1	Uniform Displacements	353
8.4.2	Nonuniform Displacements	357
8.4.3	Correlation Depth	366
8.5	Discrete Correlation	369
8.5.1	Computation of the Discrete Correlation	370
8.5.2	Subpixel Interpolation	373
8.5.3	Other Methods	377
8.5.4	Performance and Optimization	377
8.5.5	Pixel-Locking Bias Error	378
8.5.6	Random Error	380
8.6	Interrogation Strategies	387
8.6.1	Adaptation of the Interrogation Windows	388
8.6.2	Adaptation of the Spatial Correlation	397
8.6.3	Masked Correlation	404

8.7	Advanced Interrogation Strategies	405
8.7.1	Multipass Interrogation	405
8.7.2	Multigrid Interrogation	406
8.7.3	Multiframe Interrogation	408
8.7.4	Super-Resolution PIV	410
9	Postprocessing	416
9.1	Data Validation	416
9.1.1	Measures Based on Single Interrogation Results	418
9.1.2	Measures Based on Multiple Interrogation Results	419
9.1.3	Median Test	422
9.1.4	Minimum Data Yield	425
9.2	Data Replacement	426
9.2.1	Replacement by Alternative Correlation Peaks	426
9.2.2	Replacement by Interpolation	427
9.2.3	Vector Location	429
9.3	Estimation of Velocity Derivatives	431
9.3.1	Estimation of Vorticity	432
9.3.2	Estimation of the Velocity Gradient Tensor	435
9.3.3	Reconstruction of Third Velocity Component	439
9.3.4	Estimation of Forces	440
9.4	Estimation of Turbulent Flow Statistics	441
9.4.1	Averages and Fluctuations	443
9.4.2	Sampling Error and Convergence	445
9.4.3	Averaging PIV Data along a Row	446
9.4.4	Estimation of Turbulence Intensity	449
9.4.5	Estimation of Spatial Correlation	450
9.4.6	Estimation of Reynolds Stresses	453
9.4.7	Estimation of Spectra	455
9.4.8	Estimation of the Dissipation	457
9.5	Analysis of Complex Vector Fields	458
9.5.1	Visualization of Vector Fields	458
9.5.2	Critical Point Analysis	460
9.5.3	Stochastic Estimation	467
9.5.4	Proper Orthogonal Decomposition	470
9.5.5	Wavelets	480
10	Practical Guidelines	483
10.1	Why Use PIV	483
10.2	Designing the PIV Experiment	485
10.2.1	Fluid Dynamic Considerations	485
10.2.2	Selecting the Optics	485
10.2.3	Reference PIV System	486
10.2.4	Selecting the Image Density	487
10.2.5	Selecting the Seeding	490
10.2.6	Selecting the Laser Energy by Scaling	491
10.2.7	Test Section Design	494

10.3 Laboratory Practice	497
10.3.1 Determining the Image Mapping Function	498
10.3.2 Optimizing the Images	500
10.3.3 Optimizing Δt and C	502
10.4 Image Preprocessing	508
10.5 Interrogation and Optimizing D_I	509
10.6 Validation and Postprocessing	511
10.6.1 Validation	511
10.6.2 Postprocessing	512
10.7 Accuracy of a PIV Measurement	513
APPENDIX 1: Geometric Imaging	519
A1.1 Scheimpflug Condition	519
A1.2 Stereoscopic Reconstruction	520
APPENDIX 2: The Discrete Fourier Transform	523
A2.1 Definition and General Properties	523
A2.1.1 Complex-to-Complex DFT	525
A2.1.2 Cross-Talk	525
A2.2 The FFT Algorithm	526
<i>Bibliography</i>	529
<i>Index</i>	547
