

Amir Zjajo

Brain-Machine Interface

Circuits and Systems

 Springer

Contents

1 Introduction	1
1.1 Brain-Machine Interface: Circuits and Systems	2
1.2 Remarks on Current Design Practice	6
1.3 Motivation	12
1.4 Organization of the Book	13
References	14
2 Neural Signal Conditioning Circuits	17
2.1 Introduction	17
2.2 Power-Efficient Neural Signal Conditioning Circuit	18
2.3 Operational Amplifiers	21
2.4 Experimental Results	27
2.5 Conclusions	30
References	31
3 Neural Signal Quantization Circuits	33
3.1 Introduction	33
3.2 Low-Power A/D Converter Architectures	34
3.3 A/D Converter Building Blocks	39
3.3.1 Sample and Hold Circuit	39
3.3.2 Bootstrap Switch Circuit	43
3.3.3 Operational Amplifier Circuit	45
3.3.4 Latched Comparator Circuit	46
3.4 Voltage-Domain SAR A/D Conversion	52
3.5 Current-Domain SAR A/D Conversion	58
3.6 Time-Domain Two-Step A/D Conversion	60
3.7 Experimental Results	65
3.8 Conclusions	69
References	70

4	Neural Signal Classification Circuits	77
4.1	Introduction	77
4.2	Spike Detector	79
4.3	Spike Classifier	81
4.4	Experimental Results	86
4.5	Conclusions	91
	References	91
5	Brain–Machine Interface: System Optimization	95
5.1	Introduction	95
5.2	Circuit Parameters Formulation	97
5.2.1	Random Process Variability	97
5.2.2	Noise in Neural Recording Interface	101
5.3	Stochastic MNA for Process Variability Analysis	102
5.4	Stochastic MNA for Noise Analysis	106
5.5	PPA Optimization of Multichannel Neural Recording Interface . . .	110
5.5.1	Power Optimization	110
5.5.2	Power Per Area Optimization	112
5.6	Experimental Results	113
5.7	Conclusions	119
	References	120
6	Conclusions	125
6.1	Summary of the Results	125
6.2	Recommendations and Future Research	128
	Appendix	131
	Index	161
