ADDISON-WESLEY PUBLISHING COMPANY
Reading, Massachusetts
Menlo Park, California · London · Don Mills, Ontario

CONTENTS

Chapter 1 Introduction

1.1 Optimization 1
1.2 Types of problems 2
1.3 Size of problems 5
1.4 Iterative algorithms and convergence 6

PART I **Linear Programming**

Chapter 2 Basic Properties of Linear Programs

2.1 Introduction 11
2.2 Examples of linear programming problems 14
2.3 Basic solutions 16
2.4 The fundamental theorem of linear programming 18
2.5 Relations to convexity 20
2.6 Exercises 25

Chapter 3 The Simplex Method

3.1 Pivots 27
3.2 Adjacent extreme points 33
3.3 Determining a minimum feasible solution 36
3.4 Computational procedure—simplex method 40
3.5 Artificial variables 43
*3.6 Variables with upper bounds 48
3.7 Matrix form of the simplex method 53
3.8 The revised simplex method 55
*3.9 The simplex method and **LU** decomposition 60
3.10 Summary 63
3.11 Exercises 63

Chapter 4 Duality

4.1 Dual linear programs 68
4.2 The duality theorem 71
4.3 Relations to the simplex procedure 73
4.4 Sensitivity and complementary slackness 76
*4.5 The dual simplex method 78
*4.6 The primal-dual algorithm 81
4.7 Exercises 86

Chapter 5 Reduction of Linear Inequalities

5.1 Introduction 90
5.2 Redundant equations 91
5.3 Null variables 91
5.4 Nonextremal variables 94
5.5 Reduced problems 96
5.6 Applications of reduction 104
5.7 Exercises 105

PART II **Unconstrained Problems**

Chapter 6 Basic Properties of Solutions and Algorithms

6.1 Necessary conditions for local minima 110
6.2 Sufficient conditions for a relative minimum 113
6.3 Convex and concave functions 114
6.4 Minimization and maximization of convex functions . . . 118
6.5 Global convergence of descent algorithms 120
6.6 Speed of convergence 127
6.7 Summary 131
6.8 Exercises 131

Chapter 7 Basic Descent Methods

7.1 Fibonacci and golden section search 134
7.2 Line search by curve fitting 137
7.3 Global convergence of curve fitting 143
7.4 Closedness of line search algorithms 146
7.5 Inaccurate line search 147
7.6 The method of steepest descent 148
7.7 Newton's method 155
7.8 Coordinate descent methods 158
7.9 Spacer steps 161
7.10 Summary 162
7.11 Exercises 163

Chapter 8 Conjugate Direction Methods

8.1 Conjugate directions 168
8.2 Descent properties of the conjugate direction method . . . 171
8.3 The conjugate gradient method 173
8.4 The conjugate gradient method as an optimal process . . . 176
8.5 The partial conjugate gradient method 178
8.6 Extension to nonquadratic problems 181
8.7 Parallel tangents 184
8.8 Exercises 186

Chapter 9 Quasi-Newton Methods

9.1 Modified Newton method 189
9.2 Construction of the inverse 192
9.3 Davidon–Fletcher–Powell method 194
9.4 Convergence properties 197
*9.5 Scaling 201
9.6 Combination of steepest descent and Newton's method . . 205
9.7 Updating procedures 210
9.8 Summary 211
9.9 Exercises 213

PART III Constrained Minimization

Chapter 10 Constrained Minimization Conditions

10.1 Constraints 219
10.2 Tangent plane. 221
10.3 Necessary and sufficient conditions (equality constraints) . . 224
10.4 Eigenvalues in tangent subspace 227
10.5 Sensitivity 230
10.6 Inequality constraints 232
10.7 Summary 236
10.8 Exercises 237

Chapter 11 Primal Methods

11.1 Advantage of primal methods 240
11.2 Feasible direction methods 241
11.3 Global convergence 243
11.4 The gradient projection method 247
11.5 Convergence rate of the gradient projection method . . . 254
11.6 The reduced gradient method 262
11.7 Convergence rate of the reduced gradient method 267
11.8 Variations 270
11.9 Summary 272
11.10 Exercises 273

Chapter 12 Penalty and Barrier Methods

12.1 Penalty methods 278
12.2 Barrier methods 281
12.3 Properties of penalty and barrier functions 283
*12.4 Extrapolation 289
12.5 Newton's method and penalty functions 290
12.6 Conjugate gradients and penalty methods 292
12.7 Normalization of penalty functions 294
12.8 Penalty functions and gradient projection 296
12.9 Penalty functions and the reduced gradient method 299
12.10 Summary 301
12.11 Exercises 302

Chapter 13 Cutting Plane and Dual Methods

13.1 Cutting plane methods 306
13.2 Kelley's convex cutting plane algorithm 308
13.3 Modifications 310
13.4 Local duality 312
13.5 Dual canonical convergence rate 317
13.6 Separable problems 318
13.7 Duality and penalty functions 320
13.8 Exercises 322

Appendix A Mathematical Review

A.1 Sets 324
A.2 Matrix notation 325
A.3 Spaces 326
A.4 Eigenvalues and quadratic forms 327
A.5 Topological concepts 328
A.6 Functions 329

Appendix B Convex Sets

B.1 Basic definitions 332
B.2 Hyperplanes and polytopes 334
B.3 Separating and supporting hyperplanes 337
B.4 Extreme points 338

Appendix C Gaussian Elimination
