Part I: Introduction to MATRIXx[®]

1 Review of Classical Control

1

- 1.1 Introduction 1
- 1.2 Transfer Functions 2
 - 1.2.1 Frequency Response 3
- 1.3 Convolution and the Impulse Response 5
- 1.4 Stability 7
 - 1.4.1 Stability of the Zero-input Response: Asymptotic Stability 7
 - 1.4.2 Stability of the Zero-state Response: BIBO Stability 8
- 1.5 First and Second Order Systems 9
 - 1.5.1 First Order Systems 9
 - 1.5.2 Second Order Systems 11
 - 1.5.3 Effects of Adding Poles and Zeros 17
- 1.6 Feedback Control 18
 - 1.6.1 Feedback Properties 18
 - 1.6.2 Closed Loop Stability 22
 - 1.6.3 Steady State Error 23
- 1.7 Root Locus 25
 - 1.7.1 Zero Degree Root Locus 28
- 1.8 Frequency Response Analysis 28
 - 1.8.1 Bode Plot 29
 - 1.8.2 Nyquist Plot and Stability Criterion 29

1.8.3	<i>Gain and Phase Margins</i>	30
1.8.4	<i>Relationship between Open and Closed Loop Behavior</i>	32
1.9	Computer-aided Control System Design	35
1.10	Problems	36
2	<i>Introduction to MATRIXx</i>	42
2.1	On-screen Help	42
2.2	File Management	45
2.3	Data Structures: Vectors and Matrices	47
2.4	Plotting and Graphics	51
2.5	Mathematical Operations	51
2.6	Examples	55
2.7	Problems	60
3	<i>Programming in MATRIXx</i>	64
3.1	MATRIXx Editor	64
3.2	Loops and Conditional Structures	66
3.3	Programming Structures	69
3.3.1	<i>Macros</i>	70
3.3.2	<i>Command Files (Exec Files)</i>	71
3.3.3	<i>User-defined Functions</i>	71
3.3.4	<i>User-defined Commands</i>	73
3.4	Debugging Facilities	74
3.5	Program Examples	75
3.6	Problems	78
4	<i>Classical Control Commands</i>	81
4.1	Time Domain	81
4.2	Frequency Domain	82
4.3	Root Locus	84
4.4	Examples	86
4.5	Problems	95
5	<i>Introduction to State Space Analysis</i>	104
5.1	Introduction	104
5.2	State Space Realizations	105

- 5.3 Asymptotic Stability 109
- 5.4 State Space Analysis Using MATRIXx 109
- 5.5 System Interconnections 111
 - 5.5.1 *Series (Cascade) Connection* 111
 - 5.5.2 *Parallel Connection* 114
 - 5.5.3 *Feedback Connection* 115
 - 5.5.4 *Afeedback Connection* 117
 - 5.5.5 *Append and Connect* 119
- 5.6 Feedback and Sensitivity Measures 123
- 5.7 Problems 125

6 Introduction to System Build/PC™

128

- 6.1 Hierarchical Super-Blocks 129
- 6.2 Basic Steps in Model Building 130
- 6.3 Menus, Mouse, and Basic Navigation 131
- 6.4 Examples 132
- 6.5 Appendix: System Build Programs 151
- 6.6 Problems 153

Part II: Control Systems Design

7 Classical Design

155

- 7.1 Introduction 155
- 7.2 Compensation 158
- 7.3 Proportional-integral-derivative Control 159
 - 7.3.1 *Ziegler-Nichols Method* 159
 - 7.3.2 *Analytical Method* 160
 - 7.3.3 *PD Control* 164
- 7.4 Lead Compensation 165
 - 7.4.1 *Root Locus Design* 166
 - 7.4.2 *Root Locus—Geometric Method* 167
 - 7.4.3 *Root Locus—Analytical Method* 169
 - 7.4.4 *Lead compensation—Bode Design* 172
 - 7.4.5 *Bode Design—Analytical Method* 175
- 7.5 Lag Compensation 177
 - 7.5.1 *Root Locus Design* 178

7.5.2	<i>Root Locus—Analytical Method</i>	179
7.5.3	<i>Lag Compensation—Bode Design</i>	182
7.5.4	<i>Bode Design—Analytical Method</i>	184
7.6	General Compensation	186
7.7	Appendix: Design Programs	191
7.8	Problems	193
8	<i>State Space Design of Regulator Systems</i>	197
8.1	Introduction	197
8.2	Pole Placement (State Feedback)	198
8.2	Observer Design	206
8.3	Reduced Order Observer Design	213
8.4	Comments Regarding State Space Design	221
8.5	Appendix: Design Programs	223
8.6	Problems	224
9	<i>Digital Control</i>	227
9.1	Introduction	227
9.2	Difference Equations	228
9.3	Spectrum of Sampled Signal	230
9.4	The z-Transform	234
9.5	Discrete State Space Model	236
9.6	Mapping the s-Plane to the z-Plane	236
9.7	System Type and Steady State Error	240
9.8	Simulation of Digital Control Systems	241
9.8.1	<i>Impulse Invariant Transformation</i>	242
9.8.2	<i>Zero Order Hold Equivalence</i>	242
9.8.3	<i>Numerical Integration Methods</i>	244
9.9	MATRIX _X Discrete Commands	246
9.10	The Warping Problem	254
9.10.1	<i>Prewarping</i>	255
9.10.2	<i>Critical Frequency Prewarping</i>	257
9.11	Digital Compensators	259
9.11.1	<i>Proportional-integral-derivative Control</i>	259
9.11.2	<i>PID—Analytical Technique</i>	261
9.11.3	<i>Lead-lag Compensation</i>	263
9.11.4	<i>The w-Transform</i>	266
9.12	Discrete State Space Design	270

9.13	Appendix	271	
	<i>A-1 Programs</i>	271	
	<i>A-2 Tables of z-Transform and ZOH Equivalents</i>	273	
9.14	Problems	274	
10	<i>Algebraic Design</i>		281
10.1	Introduction	281	
10.2	Design Constraints	283	
10.3	Implementable Transfer Functions	285	
10.4	Selection of Desired Closed Loop Transfer Function	285	
10.5	Optimal Transfer Functions: ITAE and Symmetric Root Locus	287	
10.6	Unity Feedback Configuration	289	
10.7	Two-Parameter Configuration (RST Compensator)	296	
10.8	Plant Input/Output Feedback Configuration	302	
10.9	Appendix: Design Programs	305	
10.10	Problems	308	
11	<i>Random Signals and Systems Analysis</i>		312
11.1	Introduction	312	
11.2	Stochastic (Random) Processes	312	
11.3	Vector Processes	315	
11.4	Response of Linear Systems to Random Inputs	316	
11.5	MATRIX Commands	317	
11.6	Appendix: Example program	326	
12	<i>Linear Quadratic Control</i>		327
12.1	The Linear Quadratic Regulator Problem	327	
	12.1.1 <i>LQR Solution Using the Minimum Principle</i>	328	
	12.1.2 <i>Generalizations of LQR</i>	330	
	12.1.3 <i>MATRIX Implementation</i>	331	
	12.1.4 <i>LQR Properties with Classical Interpretations</i>	332	
12.2	Optimal Observer Design—Kalman-Bucy Filter	341	
	12.2.1 <i>Problem Formulation and Solution</i>	341	
	12.2.2 <i>MATRIX Implementation</i>	343	
12.3	The Linear Quadratic Gaussian (LQG) Problem	346	
	12.3.1 <i>LQG Problem Formulation and Solution</i>	346	
12.5	Appendix: Programs	356	

<i>Bibliography</i>	359
<i>MATRIXx Command Syntax</i>	362
<i>Index</i>	374
