Contents

<i>Contributors</i>	xi
<i>Preface</i>	xiii

Overview of Polymers for Electronic and Photonic Applications

Jane M. Shaw

I. Introduction	1
II. Radiation-Sensitive Resists	5
III. Polymers for Packaging Applications	41
IV. Active Polymers	46 53
V. Conclusions	58
References	59

The Chemistry of Polymers for Microlithographic Applications

E. Reichmanis

I. Introduction	67
II. Resist Design Requirements	71
III. Negative Resist Chemistry	75
IV. Positive Resist Chemistry	88
V. Multilevel Resist Chemistry	101
VI. Gas-Phase Functionalization	109
VII. Conclusion	110
References	111

Interconnect Dielectrics

David J. Monk and David S. Soane

I. Introduction	120
II. Chemistry of Candidate Interconnect Dielectrics	122
III. Polymer Processing	133

IV. Electrical Properties	146
V. Mechanical Properties	149
VI. Chemical Properties	155
VII. Conclusions	158
Acknowledgments	159
References	160

Recent Advances in IC Passivation and Encapsulation: Process Techniques and Materials

C. P. Wong

I. Introduction	167
II. Purpose of Encapsulation	169
III. Pre-encapsulation Cleaning	172
IV. Encapsulation Process Techniques	174
V. Device Encapsulates	186
VI. Recent Advances in Hermetically Equivalent IC Packaging	209
VII. Conclusions	213
References	214

Polyimides for Electronic Applications

Hidetaka Satou and Daisuke Makino

I. Introduction	221
II. Classification of Electronic Applications	222
III. Advantages of Polyimide for Electronic Applications	222
IV. Varieties of Polyimide	222
V. Required Properties of Polyimide for Electronics Applications	226
VI. Conclusion	246
References	246

Polyimidesiloxanes: Chemistries and Applications

Chung J. Lee

I. Introduction	249
II. Chemistry and Synthetic Schemes	251
III. Structure-Property Relationships-An Overview	273
IV. Products and Applications	274
V. New Developments and Remarks	280
Acknowledgments	282
References	283

Application of Epoxy Resins in Electronics

Ronald S. Bauer

I. Introduction	287
II. Epoxy Resins	288
III. Curing Agents	292
IV. Summary	329
References	330

Advances in Thermoplastics for Electronic Applications

Rolf E. Funer and David B. James

I. Introduction	333
II. A Brief History of Plastics in Electronics	334
III. Emerging Trends in Electronics and Their Impact on Plastics	335
IV. Application Criteria for Plastics in Electronics	337
V. New Thermoplastics and Their Properties	339
VI. Emerging Electronic Applications of Thermoplastics	363
VII. Future Trends and Needs	380
References	384

Polymers for Increased Circuit Density in Interconnection Technology

F. R. Wight and Jose A. Ors

I. Introduction	387
II. Multilayer Dielectrics	388
III. Material Design Strategy	393
IV. Structure Evaluation	425
V. Strategy Summary	427
References	432

Piezoelectric and Pyroelectric Polymers

G. Thomas Davis

I. Introduction	435
II. Polarization in Polymers	437
III. Pyroelectric Coefficients	446
IV. Piezoelectric Coefficients	450
V. Specific Polymers	454

VI. Conclusion	460
References	461

Polymers for Nonlinear Optics

Gary T. Boyd

I. Introduction	467
II. Applications Requirements	473
III. Polymers for χ^2 Applications	483
IV. Organic Materials for Third-Order Nonlinear Applications	494
V. Conclusions	499
References	501

Polymers as Third-Order Nonlinear-Optical Materials

Mark. G. Kuzyk

I. Introduction	507
II. Nonlinear Optics—Theory	511
III. Measuring Microscopic Elasticities with Second Harmonic Generation	525
IV. Molecular Susceptibilities	527
V. Experimental Techniques	536
VI. Electronic Response of a Disperse Red Azo Dye	540
VII. Survey of Molecular Susceptibilities	542
VIII. Future of Doped Polymers as Third-Order Materials	545
Acknowledgments	546
Appendix A	547
References	547

Polymers for Integrated Optical Waveguides

Bruce L. Booth

I. Introduction	549
II. Polymer Integrated Optics for Optical Interconnects	550
III. Waveguide Fabrication Technique Review	551
IV. Polymers for Optical Interconnects	594
Acknowledgments	595
References	597

Langmuir–Blodgett Manipulation of Electrically Responsive Polymers

Michael F. Rubner

I. Introduction	601
II. Langmuir–Blodgett Multilayers: Fabrication and Characterization	602
III. Design, Fabrication, and Properties of Electrically Conductive LB Films	616
IV. Complex Molecular Assemblies of Electroactive Polymers	622
Acknowledgments	627
References	627

Basic Concepts of Polymer Mechanical Behavior

Courtland N. Robinson

I. Introduction	633
II. Concepts of Elasticity	634
III. The Concepts of Viscoelasticity	636
IV. Measurement of Viscoelastic Behavior	637
V. The Effect of Temperature and Time–Temperature Superposition	639
VI. Large Deformation Behavior	647
References	650
<i>Index</i>	651
