Contents

Preface	vii
1. Introduction to Magnetism	1
1.1. Magnetic Properties of Materials	1
1.1.1. Diamagnetism	2
1.1.2. Paramagnetism	3
1.1.3. Ferromagnetism	3
1.1.4. Ferrimagnetism and Antiferromagnetism	4
1.2. Spinning Top	5
1.3. Magnetism	7
1.3.1. Equation of Motion	7
1.3.2. Gyromagnetic Ratio	9
1.4. Magnetic Moments of Atoms and Ions	12
1.4.1. Angular Momentum in Quantum Mechanics	12
1.4.2. Construction of Ground States of Atoms and Ions	12
1.5. Elements Important to Magnetism	16
Problems	17
Bibliography	18
2. Magnetic Susceptibilities	20
2.1. Diamagnetism	20
2.2. Paramagnetism	22
2.3. Weiss Theory of Ferromagnetism	25
2.4. Néel Theory of Ferrimagnetism	30
2.5. Exchange Interaction	35
2.5.1. Uniform Magnetization	37
2.5.2. Nonuniform Magnetization	37
2.6. Magnetocrystalline Anisotropy	38
2.6.1. Uniaxial Anisotropy	39
2.6.2. Cubic Anisotropy	41
2.6.3. Coordinate Transformations	42
2.7. Polder Susceptibility Tensor	45
2.7.1. Equation of Motion for the Magnetization	45
2.7.2. Susceptibility Without Exchange or Anisotropy	46
2.7.3. Susceptibility with Exchange and Anisotropy	47
2.8. Magnetic Damping	49
Problems	57
Bibliography	59

3. Electromagnetic Waves in Anisotropic Dispersive Media	60
3.1. Maxwell's Equations	60
3.2. Constitutive Relations	61
3.3. Instantaneous Poynting Theorem	63
3.4. Complex Poynting Theorem	65
3.5. Energy Densities in Lossless Dispersive Media	67
3.6. Wave Equations	69
3.7. Polarization of the Electromagnetic Fields	72
3.8. Group and Energy Velocities	74
3.9. Plane Waves in a Magnetized Ferrite	77
3.9.1. Propagation Parallel to the Applied Field	78
3.9.2. Propagation Perpendicular to the Applied Field	80
3.10. The Magnetostatic Approximation	83
Problems	84
Bibliography	87
4. Magnetostatic Modes	89
4.1. Walker's Equation	89
4.2. Spin Waves	91
4.3. Uniform Precession Modes	93
4.3.1. Normally Magnetized Ferrite Film	93
4.3.2. Tangentially Magnetized Ferrite Film	94
4.3.3. Ferrite Sphere	95
4.4. Normally Magnetized Film: Forward Volume Waves	101
4.5. Tangentially Magnetized Film: Backward Volume Waves	107
4.6. Tangentially Magnetized Film: Surface Waves	112
Problems	116
Bibliography	117
5. Propagation Characteristics and Excitation of Magnetostatic Waves	119
5.1. Energy Velocities for Magnetostatic Waves	119
5.2. Propagation Loss	121
5.2.1. Relaxation Time for Propagating Modes	121
5.2.2. Surface Waves	123
5.2.3. Volume Waves	125
5.2.4. Summary of the Phenomenological Loss Theory	127
5.3. Mode Orthogonality and Normalization	128
5.3.1. Forward Volume Waves	128
5.3.2. Backward Volume Waves	131
5.3.3. Surface Waves	133
5.4. Excitation of Magnetostatic Waves	134
5.4.1. Common Excitation Structures	134
5.4.2. Forward Volume Waves	139
5.4.3. Backward Volume Waves	144
5.4.4. Surface Waves	147
5.4.5. Discussion of Excitation Calculations	149

Problems.....	150
Bibliography	152
6. Variational Formulation for Magnetostatic Modes.....	154
6.1. General Problem Statement.....	154
6.2. Calculus of Variations.....	155
6.2.1. Formulation for One Independent Variable	155
6.2.2. Extensions to Three Independent Variables.....	157
6.3. Small-Signal Functional for Ferrites.....	159
6.4. Interpretation of the Functional.....	161
6.5. Stationary Formulas	163
6.6. Stationary Formula Examples with Forward Volume Waves	166
6.6.1. Large k Limit	166
6.6.2. Improved Approximation	167
6.6.3. Effect of Medium Inhomogeneity	169
Problems.....	170
Bibliography	172
7. Optical-Magnetostatic Wave Interactions	174
7.1. Symmetric Dielectric Waveguides	174
7.1.1. TE Modes	175
7.1.2. TM Modes	178
7.1.3. Optical Mode Orthogonality and Normalization	180
7.2. Magneto-Optical Interactions	181
7.2.1. Can You Tell the Difference Between $\bar{\mu}$ and $\bar{\epsilon}$?.....	182
7.2.2. Definition of Magnetization at High Frequencies.....	184
7.2.3. Symmetry Requirements on the Permittivity.....	185
7.3. Coupled-Mode Theory	187
7.3.1. Coupled-Mode Equations	187
7.3.2. Energy Conservation	188
7.3.3. Solutions to the Coupled-Mode Equations.....	189
7.4. Scattering of Optical Guided Modes by Magnetostatic Waves	191
7.4.1. Coupled-Mode Equations	192
7.4.2. Coupling Coefficients	195
7.4.3. Tightly Bound Optical Mode Approximation	199
7.5. Anisotropic Bragg Diffraction.....	200
Problems.....	203
Bibliography	208
Appendix: Properties of Yttrium Iron Garnet	210
Subject Index	212
