CONTENTS

Preface **xiii**

Acknowledgements **xv**

1 **Network Concepts** **1**

- 1.1 Wide Area Networks 1
 - Computer-communications evolution 1
 - Remote batch transmission 2
 - IBM 3270 Information Display System 3
 - Communications controller 4
 - Control units 4
 - Network construction 5
 - Network characteristics 7
- 1.2 Local Area Networks 8
 - Comparison to WANs 9
 - Geographic area 9
 - Data transmission and error rates 10
 - Ownership 10
 - Regulation 11
 - Data routing and topology 11
 - Type of information carried 11
 - Utilization benefits 12
- 1.3 Standards Organizations and the OSI Reference Model 13
 - IEEE 14
 - International standards organizations 15
 - CCITT 15
 - ISO 15
 - The ISO Reference Model 16
 - Layered architecture 17
 - OSI layers 17
 - Layer 1—the physical layer 19
 - Layer 2—the data link layer 19
 - Layer 3—the network layer 19
 - Layer 4—the transport layer 20
 - Layer 5—the session layer 20
 - Layer 6—the presentation layer 20
 - Layer 7—the application layer 20
 - Data flow 21

2	Local Area Networks	23
2.1	Technological Characteristics	23
	Topology	23
	Loop	24
	Bus	25
	Ring	25
	Star	26
	Tree	26
	Mixed topologies	26
	Comparison of topologies	26
	Signaling methods	28
	Broadband versus baseband	28
	Broadband signaling	29
	Baseband signaling	30
	Transmission medium	31
	Twisted-pair wire	32
	Coaxial cable	33
	Hardware interface	34
	Broadband coaxial cable	35
	Fiber optic cable	36
	Access method	37
	Listeners and talkers	37
	Carrier-Sense Multiple Access with Collision Detection (CSMA/CD)	38
	Carrier-Sense Multiple Access with Collision Avoidance (CSMA/CA)	40
	Token passing	40
2.2	Popular Types of LANs	42
	Ethernet	43
	Ethernet frame	43
	Types of Ethernets	46
	Coaxial versus twisted-pair	48
	Token passing	
	Bus operation	49
	Ring operation	50
	Data flow	51
	Network access, token and frame formats	51
	Starting/ending delimiters	52
	Access control	53
	Frame control	53
	Destination address	54
	Source address	55
	Routing information	55
	Information field	55
	Frame check sequence	55
	Frame status	56
	Data flow example	56
	Early token release	57
	FDDI	57
	Advantages	58
	Hardware components	59
	Dual Attached Station	59
	Single Attached Station	60
	Frame format and network operation	60

2.3	IEEE 802 Standards	62
	802 Committees	62
	Data link subdivision	63
	Logical link control frame format	64
	Flow control	65
	Types and classes of service	65
3	Local Area Networking	69
3.1	Hardware Components	69
	Repeaters	70
	Types	70
	Utilization	71
	Bridges	72
	Operation	73
	Filtering and forwarding	74
	Types	75
	Transparent bridge	75
	Translating bridge	75
	Features	77
	Filtering and forwarding	77
	Selective forwarding	77
	Multiple port support	78
	Local and wide area interface support	79
	Transparent operation	79
	Frame translation	80
	Frame encapsulation	80
	Fabrication	82
	Routing method	82
	Routers	82
	Network address utilization	83
	Table operation	84
	Advantages of use	84
	Multiple path transmission and routing control	84
	Flow control	85
	Frame fragmentation	86
	Brouters	86
	Operation	86
	Utilization	87
	Gateway	88
	Definition	88
	Operation	89
	File server	90
	Connectivity functions	91
	Location considerations	91
	Wire hubs	92
	Advantages	92
	Intelligent hubs	92
3.2	Software Requirements	93
	DOS	94

Network operating system	96
Services	96
Looking at NetWare	97
Architecture	97
Versions	99
Application software	99
4 Representative Local Area Networks	101
4.1 AT&T's StarLAN 10	101
Wire hub	102
Interconnecting hubs	102
Network access units	103
Attachment Unit Interface	104
Fiber hub	105
Fiber adapter	105
Distance limits	106
Coax adapter	107
SmartHUB	108
Bridges	108
4.2 IBM Token-Ring Network	110
Multistation access unit	111
IBM Cabling System	112
Cable types	113
Type 1	113
Type 2	113
Type 3	114
Type 5	114
Type 6	114
Type 8	114
Type 9	114
Connectors	115
Cable distance	115
Network adapters	116
Device and wiring constraints	117
Ring size	117
Adjusted ring length	118
Token-ring repeaters	119
Bridge	121
Network processor	121
Connectivity overview	122
Gateways	124
SDLC adapter connectivity	124
3278/9 adapter connectivity	125
5 Wide Area Networks and Network Facilities	127
5.1 Circuit Switched Networks	127
Types of facilities	128

	Analog	129
	Modem utilization	129
	Digital	131
	DSU utilization	131
5.2	Leased Line Networks	132
	Frequency division multiplexing	133
	CCITT FDM recommendations	133
	Analog leased lines	135
	Modem utilization	135
	Time division multiplexing	136
	T-carrier evolution	136
	Channel banks	137
	Digital transmission facilities	138
5.3	Packet Switching Networks	139
	Multiplexing versus packet switching	140
	Packet network construction	141
	CCITT packet network recommendations	141
	The PDN and value-added networks	142
	Packet network architecture	143
	Datagram packet networks	143
	Virtual circuit packet networks	144
	Packet formation	145
	X.25	146
	Packet format and content	147
	Call establishment	147
	Flow control	148
	Advantages of packet networks	149
	Internetwork utilization	150
	Technological advances	150
	Packet network delay problems	151
	Fast packet switching	153
	Frame relay	153
	Applications	155
	Cell relay	156

6 Bridge Routing Methods, Network Utilization and Performance Issues 157

6.1	Routing Methods	157
	Transparent bridging	158
	Address/routing table construction	158
	Advantages	159
	Disadvantages	159
	Spanning tree protocol	160
	Protocol dependency	161
	Source routing	162
	Operation	163
	Advantages	165
	Disadvantages	165

	Source routing transport bridges	166
	Operation	166
	Advantages	167
6.2	Network Utilization	167
	Serial and sequential bridging	167
	Parallel bridging	168
6.3	Performance Issues	170
	Traffic flow	170
	Network types	171
	Type of bridge	171
	Estimating network traffic	171
	Internet traffic	172
	Network types	173
	Bridge type	174
	Bridge operational considerations	174
	Ethernet traffic	175
	Token-Ring traffic	176
7	Routers	183
7.1	Router Operation	183
	Networking capability	183
7.2	Communications and Routing Protocols	185
	Communications protocols	185
	Protocol dependent routers	185
	NetWare IPX example	186
	Addressing differences	187
	Other problems	188
	Protocol independent router	189
	Advantages	189
	Supporting SNA traffic	190
	Methods to consider	190
	Routing protocols	191
	Vector distance protocol	191
	Examples	193
	Routing Information Protocol	193
	Routing Table Maintenance Protocol	194
	Routing process	194
	Link state protocol	195
	SPF algorithms	196
	Operation example	197
7.3	Performance Considerations	198
8	Gateway Functions, Methods and Applications	201
8.1	Network Architecture	202
	SNA concepts	202
	The SSCP	203
	The PU	204
	The LU	204

SNA network structure	204
Types of PUs	206
Multiple domains	206
SNA layers	208
SNA developments	210
SNA sessions	211
LU-to-LU sessions	211
Addressing	212
8.2 The 3270 Information Display System	213
Data flow	213
3270 Protocols	214
Types of control units	215
Terminal displays	217
3270 keyboard functions	218
Emulation considerations	219
8.3 Gateway Options	220
Ethernet connectivity	220
Alternative gateway methods	222
SDLC connectivity	222
X.25 connectivity	224
The TIC connection	226
3278/9 coaxial connection	227
9 Performance Issues	229
9.1 Interactive Sessions	229
Text display	230
Considering multiple transfer requests	231
Graphics display	232
9.2 File Transfers	233
Transfer time	234
Issues	234
Index	237
