

# Physics of Low-Dimensional Semiconductor Structures

Edited by

**Paul Butcher**

*University of Warwick  
Coventry, England*

**Norman H. March**

*University of Oxford  
Oxford, England*

and

**Mario P. Tosi**

*Scuola Normale Superiore  
Pisa, Italy*

Plenum Press • New York and London

# Contents

## 1. Electronic Properties in Semiconductor Heterostructures

*L. J. Sham*

1.1.	Introduction.....	1
1.2.	Basic Electronic Properties in Quantum Wells .....	3
1.2.1.	Typical Band Structure of Bulk Semiconductors .....	3
1.2.2.	Electron Confinement .....	4
1.2.3.	Hole Subbands .....	5
1.3.	Interface Effects on Electrons .....	8
1.3.1.	Effective Mass Theory for Heterostructures .....	9
1.3.2.	Band Offsets .....	11
1.4.	Types of Superlattices .....	14
1.4.1.	Classification According to Band Edge Alignment .....	14
1.4.2.	Two-Band Model .....	14
1.4.3.	Metal-Insulator Transition in Type II GaSb/InAs .....	18
1.4.4.	Type III HgTe/CdTe .....	19
1.5.	Electrons in Short-Period Superlattices .....	19
1.5.1.	The Kronig-Penney Model .....	20
1.5.2.	Symmetry Properties of Superlattices .....	22
1.5.3.	Computation Methods for Superlattice Electronic Structure .....	25
1.5.4.	Valley Mixing between $\Gamma$ and $X$ .....	26
1.5.5.	Valley Mixing between $X_x$ and $X_y$ .....	28
1.5.6.	Fractional Layer Numbers .....	30
1.6.	Effects of Magnetic Fields .....	30
1.6.1.	Conduction Electron in a Magnetic Field Normal to the Interface .....	31
1.6.2.	Valence Holes in a Magnetic Field Normal to the Interface .....	33
1.6.3.	Conduction Electron in a Magnetic Field Parallel to the Interface .....	34
1.7.	Electron Self-Energy Effects in a Doped Quantum Well .....	36
1.7.1.	The Interaction Hamiltonian .....	37
1.7.2.	Screening .....	38
1.7.3.	Electron and Hole Self-Energies .....	39
1.7.4.	Comparison with Experiment .....	41

1.8. Photoluminescence in Undoped and Doped Quantum Wells .....	41
1.8.1. Selection Rules .....	42
1.8.2. Polarization Spectrum in the Backscatter Configuration .....	43
1.8.3. Luminescence Polarization in the Waveguide Configuration ....	47
References .....	53

## 2. Phonons in Low-Dimensional Systems

*J. D. White and G. Fasol*

2.1. Introduction .....	57
2.2. Phonons in Bulk Semiconductors .....	60
2.2.1. Real and Reciprocal Space Unit Cells .....	60
2.2.2. Phonons in Crystals .....	61
2.2.3. Raman Scattering .....	64
2.3. Phonons in Layered Media .....	66
2.4. Raman Investigations of Superlattices .....	73
2.4.1. Phonon Dispersion in Superlattices .....	73
2.4.2. Acoustic Phonons .....	76
2.4.3. Confined Optical Phonons .....	81
2.4.4. Phonon Dispersion in Superlattices with Various Space Group Symmetries .....	83
2.4.5. Interface Phonons .....	85
2.5. Experimental Procedure .....	87
2.5.1. Introduction .....	87
2.5.2. Configuration of Raman Apparatus .....	88
2.6. Conclusions .....	90
References .....	91

## 3. Theory of Electron Transport in Low-Dimensional Semiconductor Structures

*P. N. Butcher*

3.1. Introduction .....	95
3.2. The Energy Band Structure of 2D and 1D Electron Gases .....	99
3.2.1. Two-Dimensional Electron Gas .....	99
3.2.2. One-Dimensional Electron Gas .....	102
3.3. Boltzmann Transport Theory .....	103
3.3.1. The Transport Coefficient .....	103
3.3.2. Boltzmann's Equation in the Quantum Limit .....	103
3.3.3. The Relaxation Time Ansatz in the Quantum Limit .....	104
3.3.4. Boltzmann Transport Theory for More Than One Subband ....	106
3.4. Quantum Size Effects in the Transport Coefficients .....	107
3.4.1. The Boltzmann Transport Approximation to the Electrical Conductivity of a 2DEG .....	107

- 3.4.2. The Effect of Level Broadening on the Electrical Conductivity of a 2DEG ..... 108
- 3.4.3. Quantum Size Effect in the Thermopower of a 2DEG ..... 112
- 3.4.4. Quantum Size Effect in a 1DEG ..... 115
- 3.4.5. Discussion ..... 117
- 3.5. Phonon Drag Thermopower of a 2DEG ..... 118
  - 3.5.1. Introduction ..... 118
  - 3.5.2. An Elementary Treatment of Phonon Drag Thermopower .... 118
  - 3.5.3. Calculation of the Phonon Drag Thermopower from Coupled Electron and Phonon Boltzmann Equations ..... 121
  - 3.5.4. Recovering the Elementary Formula for Phonon Drag ..... 125
  - 3.5.5. Comparison of Theory and Experiment ..... 126
- 3.6. Quantum Corrections to the Boltzmann Transport Formalism ..... 132
  - 3.6.1. Introduction ..... 132
  - 3.6.2. Kubo–Greenwood Formulas When  $\mathbf{B} = 0$  ..... 132
  - 3.6.3. Kubo Formulas When  $\mathbf{B} \neq 0$  ..... 136
  - 3.6.4. Onsager Symmetry ..... 138
  - 3.6.5. Weak Localization Corrections to the Conductivity ..... 139
  - 3.6.6. Universal Fluctuations ..... 144
- 3.7. Thermal and Electrical Transport Formalism for Electronic Microstructures with Many Terminals ..... 148
  - 3.7.1. Introduction ..... 148
  - 3.7.2. The Electron States in the Terminals ..... 150
  - 3.7.3. The Scattering Matrix ..... 151
  - 3.7.4. General Terminal Transport Relations for Microstructures .... 152
  - 3.7.5. Simplification of the Terminal Transport Relations for a Microstructure ..... 155
  - 3.7.6. Onsager Symmetry and Reciprocity ..... 156
  - 3.7.7. Conclusion ..... 158
- 3.8. The Aharonov–Bohm Effect, Quantum Point Contacts, and the Integer Quantum Hall Effect ..... 158
  - 3.8.1. Introduction ..... 158
  - 3.8.2. The Aharonov–Bohm Effect ..... 159
  - 3.8.3. Quantum Point Contacts ..... 162
  - 3.8.4. The Integer Quantum Hall Effect ..... 165
- 3.9. Conclusion ..... 170
- References ..... 172

## 4. Quantum Wires and Quantum Dots

*F. Stern*

- 4.1. Dimensionality ..... 177
- 4.2. Structures and Fabrication ..... 178
- 4.3. Electronic States ..... 180
- 4.4. Phonons ..... 187

4.5. Charges in Quantum Wires and Quantum Dots .....	188
4.6. Dielectric Response, Screening, and Plasmons .....	191
4.7. Transport Properties .....	192
4.8. Bound States .....	194
4.9. Optical Properties .....	194
4.10. Magnetic Field Effects .....	195
4.11. Prospects for Device Applications .....	197
References .....	198

## 5. Quantum Interference in Disordered Electron Systems

*G. Bergmann*

5.1. The Echo of the Scattered Conduction Electron .....	205
5.2. Time-of-Flight Experiment by a Magnetic Field .....	207
5.3. Spin-Orbit Coupling .....	209
5.4. Magnetic Scattering in Kondo Systems .....	212
5.4.1. Kondo Maximum .....	213
5.4.2. Low-Temperature Behavior of the Magnetic Scattering Rate ..	214
5.4.3. Quenching of Interacting Moments Far Below the Kondo Temperature .....	214
5.5. Electrons Confined in Tunneling Junctions .....	216
5.6. The Range of the Dynamical Coulomb Interaction .....	222
References .....	225

## 6. Theory of the Quantum Hall Effect

*N. d'Ambrumenil*

6.1. Introduction .....	227
6.2. The Quantum Hall Effect .....	228
6.2.1. The Measurement .....	228
6.2.2. Interpretation of the Measurement .....	229
6.2.3. Laughlin's Gedanken Experiment .....	230
6.2.4. Aspects of a Microscopic Theory of the Quantum Hall Effect ..	231
6.2.5. Edge States .....	237
6.3. The Fractional Quantum Hall Effect .....	239
6.3.1. Interpretation of the Measurement: Many-Body Gap and Fractional Charge .....	240
6.3.2. Zeros and Flux Quanta .....	241
6.3.3. Laughlin's Wave Function .....	243
6.3.4. Haldane's Argument .....	245
6.3.5. Other Filling Fractions: The Hierarchy .....	247
6.3.6. Microscopic Trial Wave Functions for the Hierarchy .....	249
6.3.7. Spin Polarization .....	250

6.3.8. Higher Landau Levels .....	250
6.3.9. Ring Exchange .....	252
6.3.10. Summary .....	252
Appendix: (More or Less) Standard Results .....	253
6.A.1. Hamiltonian and Energy Spectrum .....	253
6.A.2. Gauge Choice .....	255
6.A.3. Conserved Momenta, Magnetic Translations, and Rotations ....	256
6.A.4. The Single-Particle Green's Function .....	259
6.A.5. Exactness of Laughlin's Wave Function .....	261
6.A.6. The Hierarchy .....	262
References .....	264

## 7. Tunneling in Semiconductor Resonant Structures

*G. García-Calderón*

7.1. Introduction .....	267
7.2. Concept of Tunneling .....	268
7.3. Brief History of Tunneling .....	269
7.4. Resonant Structures .....	274
7.5. Physics of Resonant Tunneling .....	282
7.5.1. Resonant States .....	284
7.5.2. Coherent Tunneling Current .....	289
7.5.3. Inelastic Effects .....	291
7.6. Conclusion .....	294
References .....	294

## 8. Keldysh Formalism and the Landauer Approach

*S. Datta*

8.1. Introduction .....	299
8.2. A Few Concepts .....	305
8.3. Equilibrium Solution .....	309
8.4. Transport Equation .....	311
8.5. Terminal Current .....	314
8.6. Linear Response .....	316
8.7. Reciprocity .....	317
8.8. Heat Exchange .....	319
8.9. Concluding Remarks .....	320
Appendix: Mathematical Details .....	321
References .....	329

## 9. Magneto-Optical Properties of Semiconductor Heterostructures

*J. C. Maan*

9.1. Introduction	333
9.2. Energy Levels of Heterostructures in a Magnetic Field and a Confining Potential	334
9.2.1. Perpendicular Field	334
9.2.2. Tilted Field	335
9.2.3. Parallel Field	337
9.2.4. Superlattices in a Parallel Field	339
9.3. Selection Rules and Transition Matrix Elements	340
9.4. Cyclotron Resonance	344
9.4.1. Parabolic Bands	344
9.4.2. Nonparabolicity	345
9.4.3. Tilted Field Intraband Experiments	348
9.5. Interband Transitions	350
9.5.1. Simple Bands	350
9.5.2. Excitons in a Magnetic Field	351
9.5.3. Valence Band Structure	355
9.5.4. Doped Samples	358
9.6. Applications of Magneto-Optics	363
9.6.1. High-Excitation Luminescence in Quantum Wells	363
9.6.2. Spin Relaxation in Quantum Wells	366
9.7. Summary	370
References	371

## 10. Electrons in Superlattices

*G. H. Döhler*

10.1. Introduction	375
10.2. Electronic Band Structure of Superlattices	375
10.2.1. Compositional Superlattices	377
10.2.2. Doping Superlattices ( <i>n-i-p-i</i> Structures)	379
10.3. Dynamics of Electrons in Superlattices	383
10.3.1. Bloch Oscillations and the Wannier–Stark Ladder	383
10.3.2. Transitions on the Wannier–Stark Ladder and Transport Properties	386
10.3.3. Intersubband Transitions	389
10.4. Interband Transitions in Superlattices	390
10.4.1. Dipole Matrix Elements in Type-I and Type-II Compositional and <i>n-i-p-i</i> Doping Superlattices	390
10.4.2. The Internal Franz–Keldysh Effect in <i>n-i-p-i</i> Superlattices	394
10.4.3. The Quantum Confined Stark Effect: “MQW-Hetero- <i>n-i-p-i</i> ’s”	395

10.5. Magnetic Wave Function Tuning in Doping Superlattices .....	397
10.6. Impurity States and Impurity Bands in $\delta$ -Doped <i>n-i-p-i</i> Superlattices ..	400
References .....	404

## 11. Metallic Superlattices

*D. Kerkmann and D. Pescia*

11.1. Growth Modes and Structural Analysis of Metallic Superlattices ....	407
11.1.1. Growth of Metallic Epitaxial Layers .....	407
11.1.2. Growth Detection .....	413
11.2. Magnetic Ground State of Epitaxial Layer .....	418
11.2.1. "Enhanced" Magnetic Moments .....	418
11.2.2. The Many-Spin Ground State and Low-Lying Excited States	422
11.3. Magnetism of Epitaxial Films at Finite Temperatures .....	426
11.3.1. Long-Range Order at Finite Temperatures .....	426
11.3.2. Magnetic Anisotropy and Long-Range Order .....	430
11.3.3. Existence of a Phase Transition at Temperatures $T \sim \Gamma$ .....	432
References .....	439

## 12. Phonon Emission, Absorption, and Reflection from a Two-Dimensional Electron Gas

*L. J. Challis*

12.1. Introduction .....	441
12.2. Phonon Emission .....	442
12.2.1. Zero Magnetic Fields .....	443
12.2.2. Quantizing Magnetic Fields .....	449
12.3. Phonon Scattering .....	453
12.4. Conclusion .....	459
References .....	460

## 13. Quantum Adiabatic Electron Transport in Ballistic Conductors

*L. P. Kouwenhoven*

13.1. Introduction .....	463
13.2. Fabrication and Working Principles of a Split-Gate Device .....	465
13.3. Quantized Conductance of a Point Contact .....	469
13.4. Depopulation of 1D Magnetolectric Subbands .....	474
13.5. Electron Motion in a Magnetic Field .....	476
13.5.1. Electron Focusing .....	476
13.5.2. Edge Channels .....	478
13.5.3. Quantized Longitudinal Conductance .....	480

13.6. Anomalous Integer Quantum Hall Effect .....	482
13.7. Transition from Ohmic to Adiabatic Transport .....	485
13.7.1. Transport Through Two QPCs in Series .....	485
13.7.2. Electron-Beam Collimation and Electron Focusing in a Dot ..	490
13.8. Summary and Conclusions .....	494
References .....	495

## 14. Experiments on Two-Dimensional Wigner Crystals

*E. Y. Andrei, F. J. B. Williams, D. C. Glattli, and G. Deville*

14.1. Introduction .....	499
14.2. The Phase Diagram .....	500
14.2.1. Coulomb System of Classical Particles .....	500
14.2.2. Coulomb System of Quantum Particles $T = 0, B = 0$ .....	501
14.2.3. Coulomb System of Quantum Particles $T = 0, B \neq 0$ .....	502
14.2.4. Coulomb System of Quantum Particles $T \neq 0, B \neq 0$ .....	503
14.3. How to Recognize the Solid? .....	505
14.4. Experimental Realizations of a 2D Plasma .....	508
14.5. Experiments on the Quantum Wigner Crystal .....	509
14.5.1. Shear Modulus Measurements .....	509
14.5.2. Conductivity Measurements .....	513
14.5.3. Discussion .....	523
14.6. Experiments on the Classical Wigner Crystal .....	531
14.6.1. Shear Modulus Experiments .....	531
14.6.2. Specific Heat Experiments .....	532
14.7. Summary .....	535
References .....	535

## 15. Artificial Semiconductor Structures: Electronic Properties and Device Applications

*F. Beltram and F. Capasso*

15.1. Introduction .....	539
15.2. Quantum Electron Devices .....	540
15.2.1. Resonant Tunneling Bipolar Transistors with Double Barrier in the Base .....	541
15.2.2. Devices with Multiple Peak $I$ - $V$ Characteristics and Multiple-State RTBTs .....	546
15.2.3. Gated Quantum-Well and Superlattice Base Transistor .....	555
15.3. Transport in Superlattices .....	562
15.3.1. Transport and Negative Differential Conductance in Superlattices with Wide Minibands .....	563
15.3.2. Localization and Transport in Superlattices .....	565

15.3.3. Bloch Oscillations .....	566
15.3.4. Observation of Negative Differential Conductance in a Superlattice .....	567
15.3.5. Scattering-Controlled Resonances .....	571
References .....	573
<b>Index</b> .....	<b>577</b>
