Preface	ix
PART I MATHEMATICAL MODELS OF NETWORKS	1
CHAPTER 1 Introduction to Network Modelling and Solution	3
1.1 Introduction	3
1.2 Basic notions	4
1.3 Network laws	6
1.4 Solving a network	7
1.5 Modelling a network	8
CHAPTER 2 An Algebraic Model of the Network Topology	10
2.1 Introduction	10
2.2 Algebraic models of branch, node, cut-set and loop-set	10
2.3 Network topology modelled by cut-set and loop-set incidence matrices	15
2.4 Network topology modelled by tree and cotree incidence matrices	18
2.5 The topological matrix of the network	21
CHAPTER 3 A Mathematical Model of the Current and Voltage States of a Network	22
3.1 The current state vector	22
3.2 A linear space model of the current state	23
3.3 A matrix model of the current state of a network	26
3.4 The voltage state vector	29
3.5 A linear space model of the voltage state	30
3.6 A matrix model of the voltage state	33
3.7 The current–voltage state of a network	36
3.8 The current–voltage equations and the state space	42
3.9 Non-linear current–voltage equations	49
CHAPTER 4 Classical Network Theory	51
4.1 Introduction	51
4.2 Alternative development of mesh currents and nodal voltages	52
4.3 Loop-set (mesh) and cut-set (node) analysis	54
4.4 Thevenin’s theorem	55

4.5 Norton's theorem	58
4.6 The superposition principle	61
4.7 Tellegen's theorem	62
PART II SOLVING SPECIFIC NETWORK PROBLEMS	63
CHAPTER 5 The Solution Model of a Network	65
5.1 Introduction	65
5.2 Incorporating the input data to complete the solution model of a network	66
5.3 The solution model of a network	70
5.4 Methodology of the network solution process	72
CHAPTER 6 Solving a Network with Known Topology and Branch Parameter Data	74
6.1 Introduction	74
6.2 Forming the algebraic network model	75
6.3 Analysis and solution theory of the algebraic network model	83
6.4 Examples of network solution	89
CHAPTER 7 The Network Solution in the Case of Fully Known Topology	97
7.1 Introduction	97
7.2 The formulation of a network problem	98
7.3 The algebraic model of a network	99
7.4 The classification of solutions of the model	102
7.5 Solving a model which is known to be consistent	103
7.6 An example of the solution of a consistent model	109
7.7 Solving a model which may not be consistent	113
7.8 Example of the solution of an inconsistent model	121
7.9 Least squares solution example	125
CHAPTER 8 Solving Networks with Partial and/or Incon- sistent Data of All Types	129
8.1 Introduction	129
8.2 On knowing the network topology	129
8.3 Forming the algebraic network model	130
8.4 Solvability classification	132
8.5 Solving a consistent model with integer variables	134
8.6 Simple examples of solving a consistent model with integer variables	136

8.7 Identifying and solving an inconsistent model with integer variables	141
PART III SPECIAL METHODS	143
CHAPTER 9 Equivalent Networks	145
9.1 Introduction	145
9.2 Special cases of equivalent networks	146
9.3 Network equations related to the division of a network	152
9.4 Equivalent networks	156
9.5 Deriving an equivalent network	159
9.6 Simple examples of the construction of an equivalent network	161
9.7 The choice of tree/cotree structure	164
CHAPTER 10 Decomposition of Networks	166
10.1 Introduction	166
10.2 A diacoptical method of tearing a network	167
10.3 An example of diacoptical tearing of a network	171
10.4 The second method of network decomposition	172
10.5 Examples of the second method applied to a network	179
APPENDIX	188
Part A Generalized inverse matrices	188
Part B Matrix computation algorithms and theory	189
Part C Network theory and computation algorithms	195
Part D Derivation of the model of an equivalent network	209
Part E Rank and generalized inverse of network matrices	211
Part F Solution of the matrix equation $YV = I$ in cases when matrix Y is expressed as a product of matrices	216
