

Geometrical theory of diffraction

V. A. Borovikov
and B. Ye. Kinber

The Institution of Electrical Engineers

Contents

Editorial preface	viii
Preface	ix
1 Introduction	1
2 Fundamentals of the geometrical theory of diffraction	7
2.1 Laws of geometrical optics	7
2.2 Postulates of the geometrical theory of diffraction	9
2.3 Diffraction by slit: representation of edge waves in terms of diffraction coefficients	13
2.4 Diffraction by slit: explicit expressions for edge diffracted waves	17
2.5 Reconstruction of antenna radiation pattern by its near-field measurements	21
2.6 Compensation of diffraction effects in antenna synthesis	24
2.7 GTD applicability limits	28
3 Ray fields and reflections from smooth bodies	29
3.1 Ray expansions	29
3.2 Eikonal equation and transport equations	30
3.3 Applicability limits for ray expansions: crossing caustics	35
3.4 Ray expansions of simple fields	35
3.5 Asymptotic solutions of reflection problems	44
3.6 Transformation of ray fields by smoothly curved diffraction gratings	49
3.7 Ray fields in irregular flaring waveguides	54
3.8 Smooth junction between regular waveguides	59
4 Caustic and focal expansions	69
4.1 Uniform asymptotic expansions	69
4.2 Relationships between wavefronts and caustics	70
4.3 Systems of co-ordinates near caustics	73
4.4 Caustic expansions	75
4.5 Field near asymptote of a caustic	78

4.6	Focal expansions	80
4.7	Diffraction integral	83
5	Diffacted waves	92
5.1	Classification	92
5.2	Diffraction of plane wave by halfplane: penumbra fields	95
5.3	Cylindrical wave diffraction by halfplane; diffraction by wedge	101
5.4	Penumbra fields in slit diffraction	108
5.5	2-D diffraction of arbitrary wave by curved wedge	112
5.6	3-D edge diffraction	120
5.7	Diffraction of toroidal wave by bicone	123
5.8	Canonic wave expansions	129
5.9	Reflection of penumbra field from smooth surface	132
5.10	Diffraction of penumbra field by wedge	137
5.11	Radiation pattern of slotted-guide antenna	142
5.12	Wedge diffraction of field with caustic in inhomogeneous medium	148
6	GTD or physical optics methods?	155
6.1	Approximations of Kirchhoff and physical theory of diffraction	155
6.2	High-frequency asymptotics in Kirchhoff approximation and physical theory of diffraction	159
6.3	Radiation of reflector antenna	168
6.4	Diffraction by corner point of edge	177
6.5	Diffraction by arbitrary aperture	181
6.6	Side radiation of parabolic antenna with noncircular edge	199
6.7	Applicability limits of GTD formulations: Fresnel zones	207
6.8	Field-forming region and applicability criterion of geometrical optics	217
7	Diffraction by bodies of complex geometry	224
7.1	Phase structure of solutions	224
7.2	Successive diffraction method	230
7.3	Diffraction by strip: recursion expressions for edge diffracted waves	231
7.4	Method of self-consistent field	237
7.5	Accuracy of successive diffraction and self consistent field methods	245
8	Diffraction at open end of waveguide	264
8.1	Waveguide penumbra fields	264
8.2	Open-ended waveguide: nonuniform asymptotic	268
8.3	Waveguiding problems: slotted waveguide, reflector in waveguide bend	277
8.4	Open-ended waveguide: asymptotic uniform over observation angle	289
8.5	Open-ended waveguide: asymptotic uniform over angles of incidence and observation	298

8.6	Mode conversion in waveguide-horn junction	304
8.7	Asymptotic of excitation and reflection coefficients of horn modes in a waveguide-horn junction	314
9	Methods and results of asymptotic diffraction theory	325
9.1	Sommerfeld integral method	325
9.2	Method of canonical waves	331
9.3	Boundary layer method: edge diffraction by bicone	337
9.4	Nonstationary problems	349
9.5	Diffraction by cone	355
10	Appendix	364
10.1	Generalised Fresnel integral	364
10.2	Expressions for radiation pattern of reflector antenna	365
10.3	Calculation of sums of integrals	369
10.4	Field of system of equidistant sources	374
11	References	377
	Index	388
