

*This book is intended to provide a comprehensive introduction to the field of photophysics of aromatic molecules. It covers the basic principles of photochemistry and photophysics, and discusses the properties and applications of various aromatic molecules, including benzene, naphthalene, anthracene, and polycyclic aromatic hydrocarbons. The book also explores the relationship between the chemical structure of aromatic molecules and their photophysical behavior, and examines the role of aromatic molecules in various industrial and technological applications.*

**Photophysics  
of  
Aromatic Molecules**

## Contents

- 86 1.1 Electronic structure . . . . .  
86 1.2 Molecular structure . . . . .  
86 1.3 The PFO model . . . . .  
86 1.4 Selection rules . . . . .  
86 1.5 Other theoretical models . . . . .  
86 Tables 1.1–1.3 . . . . .  
86 1.6 References . . . . .

# Contents

- 86 2. Photophysical processes . . . . .  
86 2.1 Introduction . . . . .  
86 2.2 Unimolecular processes . . . . .  
86 2.3 Biphotonic processes . . . . .  
86 2.4 Bimolecular processes . . . . .  
86 2.5 Rate parameters . . . . .  
86 Tables 2.1–2.5 . . . . .  
86 2.6 References . . . . .

- 86 3. Absorption . . . . .  
86 3.1 Vibronic states . . . . .  
86 3.2 Hot bands . . . . .  
86 3.3 The extinction coefficient . . . . .  
86 3.4 The Born-Oppenheimer approximation . . . . .  
86 3.5 The Einstein coefficients . . . . .  
86 3.6 Transition moments . . . . .  
86 3.7 Oscillator strengths . . . . .  
86 3.8 The Franck-Condon principle . . . . .  
86 3.9 Absorption spectra . . . . .

3.10 Flash photolysis and $S_1 - S_0$ absorption . . . . .	58
3.11 Multiphotonic absorption . . . . .	62
Tables 3.1–3.7 . . . . .	70
3.12 References . . . . .	82
<b>4. Fluorescence</b>	
4.1 The fluorescence spectrum . . . . .	84
4.2 The mirror symmetry relation . . . . .	85
4.3 The radiative lifetime . . . . .	87
4.4 The fluorescence parameters . . . . .	88
4.5 Competing bimolecular processes . . . . .	90
4.6 Determination of fluorescence lifetimes . . . . .	94
4.7 Determination of fluorescence spectra and quantum yields . . . . .	97
4.8 Experimental tests of the radiative lifetime relations . . . . .	100
4.9 Fluorescence lifetimes and quantum efficiencies . . . . .	103
4.10 Fluorescence spectra . . . . .	106
4.11 Scintillator solutes . . . . .	108
4.12 Influence of environment on fluorescence and absorption spectra . . . . .	109
Tables 4.1–4.9 . . . . .	120
4.13 References . . . . .	139
<b>5. Radiationless transitions</b>	
5.1 Singlet-singlet internal conversion . . . . .	142
5.2 Intersystem crossing . . . . .	144
5.3 Triplet-triplet internal conversion . . . . .	145
5.4 Internal quenching of fluorescence . . . . .	145
5.5 $T_1 - S_0$ intersystem crossing . . . . .	147
5.6 The theory of radiationless transitions . . . . .	149
5.7 $T_1 - S_0$ intersystem crossing: Franck-Condon factors . . . . .	152
5.8 The isotope rule . . . . .	155
5.9 $T_1 - S_0$ intersystem crossing: comparison of theory with experiment . . . . .	156
5.10 Energy gaps . . . . .	159
5.11 $S_1 - S_0$ internal conversion . . . . .	160
5.12 $S_2 - S_1$ internal conversion . . . . .	161
5.13 Dual luminescences . . . . .	162
5.14 Internal conversion in benzene and its derivatives . . . . .	171
Tables 5.1–5.10 . . . . .	178
5.15 References . . . . .	191

**6. The triplet state**

6.1	Triplet and phosphorescence parameters	193
6.2	The determination of triplet quantum yields	195
6.3	Triplet quantum yields	200
6.4	Spectrophosphorimetry	201
6.5	The determination of phosphorescence quantum efficiencies	206
6.6	Phosphorescence lifetimes, quantum efficiencies and spectra	207
6.7	The heavy atom effect	208
6.8	Singlet-triplet absorption	211
6.9	Triplet-triplet absorption	218
6.10	Triplet energy levels	222
6.11	Assignment of the electronic states of the polyacenes	224
6.12	Spin-orbit interaction	226
6.13	Singlet-triplet intersystem crossing	229
6.14	Triplet-triplet internal conversion and fluorescence	235
6.15	Photo-ionization	237
6.16	Vapours of benzene and its derivatives	240
6.17	The triplet state of benzene	248
6.18	Tables 6.1–6.23	251
6.18	References	297

**7. Excimers**

7.1	Excimer fluorescence	301
7.2	Photostationary reaction kinetics	302
7.3	Transient reaction kinetics	304
7.4	Determination of rate parameters	305
7.5	High temperature behaviour	309
7.6	Frequency factors and activation energies	311
7.7	Diffusion-controlled processes	312
7.8	Excimer fluorescence in solution	316
7.9	Excimer fluorescence of crystals	317
7.10	Photodimer and excimer formation	319
7.11	Sandwich dimers	322
7.12	Intramolecular excimer fluorescence	323
7.13	The excimer potential energy diagram	325
7.14	Theory of excimer states	327
7.15	Determination of excimer interaction potential	331
7.16	Photophysical processes in excimers	335
7.17	Excimer formation processes	339
7.18	Excimer phosphorescence	343
7.18	Tables 7.1–7.11	349
7.18	References	370

## 8. Delayed luminescence

8.1	Types of delayed luminescence	372
8.2	E-type delayed fluorescence	373
8.3	Fluorescence of mixed molecular species	375
8.4	Triplet-triplet interaction in concentrated fluid solutions	378
8.5	Triplet-triplet interaction in dilute fluid solutions	384
8.6	P-type delayed fluorescence in fluid solutions	385
8.7	P-type delayed fluorescence in rigid solutions	389
8.8	Mechanism of triplet-triplet interaction	391
8.9	The determination of total triplet quantum yields	394
8.10	Recombination luminescence	397
	Table 8.1	400
8.11	References	401

## 9. Molecular complexes and exciplexes

9.1	Donor-acceptor complexes	403
9.2	Charge-transfer absorption	406
9.3	Kinetics of DA complexes	410
9.4	Contact CT absorption	412
9.5	Luminescence of DA complexes	415
9.6	Exciplexes	420
9.7	Mixed excimers	421
9.8	Fluorescence of exciplexes	425
9.9	Impurity quenching of fluorescence	433
9.10	Photochemical quenching of fluorescence	439
9.11	Kinetics of impurity quenching	441
9.12	Impurity quenching of triplet states	447
	Tables 9.1–9.27	452
9.13	References	489

## 10. Interactions with oxygen and nitric oxide

10.1	Oxygen and nitric oxide	492
10.2	Contact CT absorption	493
10.3	Enhanced $S_0 - T_1$ absorption	494
10.4	Quenching by oxygen	496
10.5	Photoperoxidation studies	502
10.6	Quenching by nitric oxide	504
10.7	Static quenching	506
10.8	Kinetics of fluorescence quenching by oxygen	508
10.9	Collisional and exchange quenching	510
	Tables 10.1–10.3	514
10.10	References	517

**11. Energy migration and transfer**

11.1	Migration and transfer processes . . . . .	518
11.2	Radiative migration and transfer . . . . .	521
11.3	Exciton states in crystals . . . . .	523
11.4	Singlet exciton migration and transfer in crystals . . . . .	528
11.5	Triplet-triplet energy transfer in solution . . . . .	537
11.6	Triplet exciton migration and transfer in mixed crystals . . . . .	544
11.7	Triplet-triplet interactions in mixed crystals . . . . .	550
11.8	Triplet excitons in pure crystals . . . . .	559
11.9	Singlet-singlet energy transfer in solution . . . . .	567
11.10	Influence of diffusion on energy transfer . . . . .	576
11.11	Excitation migration and transfer in aromatic liquid solutions . . . . .	580
11.12	Other intermolecular transfer processes . . . . .	590
11.13	Intramolecular energy transfer . . . . .	594
11.14	Photochemistry and photobiology . . . . .	599
	Tables 11.1-11.18 . . . . .	601
11.15	References . . . . .	619
