Contents

Part I Background	1
--------------------------------	---

1. Why Study Random Matrices?	3
1.1 Statistics of the Eigenvalues of Random Matrices	3
1.1.1 Nuclear Physics	3
1.1.2 Stability of Large Ecosystems	6
1.1.3 Disordered Harmonic Solids	8
1.2 Products of Random Matrices in Chaotic and Disordered Systems	9
1.2.1 Chaotic Systems	9
1.2.2 Disordered Systems	11
1.3 Some Remarks on the Calculation of the Lyapunov Exponent of PRM	13
2. Lyapunov Exponents for PRM	17
2.1 Asymptotic Limits: the Furstenberg and Oseledec Theorems	18
2.2 Generalized Lyapunov Exponents	22
2.3 Numerical Methods for the Computation of Lyapunov Exponents	26
2.4 Analytic Results	29
2.4.1 Weak Disorder Expansion	33
2.4.2 Replica Trick	34
2.4.3 Microcanonical Method	36

Part II Applications	41
-----------------------------------	----

3. Chaotic Dynamical Systems	43
3.1 Random Matrices and Deterministic Chaos	44
3.1.1 The Independent RM Approximation	46
3.1.2 Independent RM Approximation: Perturbative Approach	48
3.1.3 Beyond the Independent RM Approximation ...	50
3.2 CLE for High Dimensional Dynamical Systems	54

4. Disordered Systems	59
4.1 One-Dimensional Ising Model and Transfer Matrices ..	59
4.2 Random One-Dimensional Ising Models	61
4.2.1 Ising Chain with Random Field	62
4.2.2 Ising Chain with Random Coupling	67
4.3 Generalized Lyapunov Exponents and Free Energy Fluctuations	70
4.4 Correlation Functions and Random Matrices	75
4.5 Two- and Three-Dimensional Systems	82
5. Localization	87
5.1 Localization in One-Dimensional Systems	89
5.1.1 Exponential Growth and Localization: The Borland Conjecture	90
5.1.2 Density of States in One-Dimensional Systems ..	91
5.1.3 Conductivity and Lyapunov Exponents: The Landauer Formula	93
5.2 PRMs and One-Dimensional Localization: Some Applications	95
5.2.1 Weak Disorder Expansion	95
5.2.2 Replica Trick and Microcanonical Approximation	98
5.2.3 Generalized Localization Lengths	100
5.2.4 Random Potentials with Extended States	104
5.3 PRMs and Localization in Two and Three Dimensions	106
5.4 Maximum Entropy Approach to the Conductance Fluctuations	110
<hr/>	
Part III Miscellany	115
<hr/>	
6. Other Applications	117
6.1 Propagation of Light in Random Media	117
6.1.1 Media with Random Optical Index	119
6.1.2 Randomly Deformed Optical Waveguide	121
6.2 Random Magnetic Dynamos	123
6.3 Image Compression	128
6.3.1 Iterated Function System	128
6.3.2 Determination of the IFS Code for Image Compression	129
7. Appendices	135
7.1 Statistics of the Eigenvalues of Real Random Asymmetric Matrices	135

7.2	Program for the Computation of the Lyapunov Spectrum	138
7.3	Poincaré Section	142
7.4	Markov Chain and Shannon Entropy	144
7.5	Kolmogorov-Sinai and Topological Entropies	146
7.6	Generalized Fractal Dimensions and Multifractals	148
7.7	Localization in Correlated Random Potentials	152
