<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Clustered observations	1
1.1.1	Subjects and variables	4
1.2	Matrices	4
1.2.1	Matrix operations and properties	5
1.2.2	Matrix differentiation	7
1.3	Normal distribution	8
1.3.1	Conditional distributions	9
1.4	Ordinary regression	10
1.4.1	Analysis of variance	11
1.5	Examples	12
1.5.1	Commuting times	12
1.5.2	Blood pressures	13
1.6	Fixed versus random	15
1.7	Shrinkage estimation of cluster means	16
1.8	Sources of variation	18
1.9	Maximum likelihood	19
1.9.1	Newton-Raphson method	20
1.10	The exponential family of distributions	22
1.11	Bibliographical notes	23
<b>2</b>	<b>Analysis of covariance with random effects</b>	<b>26</b>
2.1	Models	26
2.1.1	The log-likelihood	28
2.2	Examples	30
2.2.1	Financial ratios	30
2.2.2	Rat weights	32
2.2.3	Monitoring pregnancy	34
2.2.4	House prices	36
2.2.5	Validity of an educational test	38
2.3	Newton-Raphson and Fisher scoring algorithms	40
2.3.1	Some technical details	43
2.4	Generalized least squares	46
2.5	EM algorithm	47
2.5.1	The E-step	48
2.5.2	The M-step	49

2.6	Restricted maximum likelihood	49
2.7	Balanced design	52
2.8	The price of ignoring clustering	53
2.9	Cluster size and information	56
2.10	Residuals. Model checking	60
	2.10.1 Shrinkage estimators	61
2.11	Measures of quality of the model fit	62
2.12	Bibliographical notes	62
<b>3</b>	<b>Examples. Random-effects models</b>	<b>64</b>
3.1	Financial ratios	64
3.2	Rat weights	74
3.3	Monitoring pregnancy	78
3.4	House prices	83
3.5	GRE validity study	86
	3.5.1 Estimation based on the within-depart- ment means	91
<b>4</b>	<b>Random regression coefficients</b>	<b>94</b>
4.1	Models	94
4.2	Invariance and linear transformations	97
	4.2.1 Invariance in ordinary regression	97
	4.2.2 Random coefficients and invariance	98
4.3	Patterns of variation	100
	4.3.1 Categorical variables and variation	104
4.4	Maximum likelihood estimation	106
	4.4.1 Constrained maximization	110
	4.4.2 Confounding in the variation part	111
4.5	Longitudinal analysis	112
4.6	Multivariate regression	116
	4.6.1 Multivariate and longitudinal data	118
4.7	REML estimation	123
4.8	Model checking	124
4.9	General patterns of dependence	124
	4.9.1 General form of elementary-level vari- ance	126
4.10	Bibliographical notes	127
<b>5</b>	<b>Examples using random coefficient models</b>	<b>128</b>
5.1	Financial ratios	128
5.2	Rat weights	136
5.3	Pregnancy monitoring	137
5.4	House prices	141
5.5	GRE validity study	145

<b>6</b>	<b>Multiple levels of nesting</b>	156
6.1	Models	156
6.1.1	Level-wise equations	159
6.2	Estimation	160
6.2.1	Organizing computations	165
6.3	Model choice	167
6.4	Restricted maximum likelihood	169
6.5	Model diagnostics	170
6.6	Likelihood ratio testing	171
6.6.1	Independent data?	172
6.6.2	An irrelevant variable	173
6.7	More than three levels of nesting	173
6.8	Hearing loss data	175
6.9	Model based estimation in surveys	184
6.9.1	A model based alternative	187
6.10	Bibliographical notes	189
<b>7</b>	<b>Factor analysis and structural equations</b>	190
7.1	Introduction	190
7.2	Factor analysis	190
7.3	Maximum likelihood estimation	192
7.3.1	Exploratory mode	194
7.4	Two-level factor analysis	195
7.4.1	Maximum likelihood estimation	197
7.4.2	Constrained maximization	201
7.5	Restricted maximum likelihood	202
7.6	Saturated model (starting solution)	203
7.7	Inference about $\bar{y}$	204
7.8	Measurement error models	205
7.9	A two-level measurement error model	209
7.10	General covariance structures	212
7.11	Example. Second International Mathematics Study	212
7.12	Hearing loss data	215
7.13	Bibliographical notes	218
<b>8</b>	<b>GLM with random coefficients</b>	219
8.1	Introduction	219
8.2	Models for independent observations	219
8.2.1	Generalized least squares	223
8.3	Quasilielihood	223
8.3.1	Extended quasilielihood	224
8.4	Models for clustered observations	225
8.5	Maximum likelihood estimation	227

8.5.1	Direct maximization	228
8.5.2	Approximation of the integrand	230
8.5.3	Approximate Fisher scoring algorithm	231
8.6	Information about variation	235
8.7	Restricted maximum likelihood	236
8.8	Example. Interviewer variability	237
8.9	Death rates of Medicare patients	244
8.10	Bibliographical notes	248
<b>9</b>	<b>Appendix. Asymptotic theory</b>	<b>250</b>
9.1	Limited variance of the scoring function	253
9.2	Asymptotic normality of the scoring vector	254
9.3	Consistency of MLE	254
9.4	Asymptotic normality of MLE	255
