|                                       | <b>Transducer<br/>Code</b> | <b>Page<br/>No.</b> |
|---------------------------------------|----------------------------|---------------------|
| <b>Transducer types</b>               |                            | vii                 |
| <b>Preface</b>                        |                            | 1                   |
| <b>Acknowledgements</b>               |                            | 3                   |
| <b>A sensible approach to sensing</b> |                            | 5                   |
| <b>Acceleration, linear</b>           | AC                         | 17                  |
| <b>Acceleration, angular</b>          | AA                         | 29                  |
| <b>Angle (position)</b>               | AN                         | 33                  |
| <b>Flow, gases</b>                    | FG                         | 51                  |
| <b>Flow, liquids</b>                  | FL                         | 67                  |
| <b>Length</b>                         | LE                         | 79                  |
| <b>Displacement</b>                   | DL                         | 87                  |
| <b>Extension</b>                      | EX                         | 99                  |
| <b>Position and proximity</b>         | PO                         | 109                 |
| <b>Strain</b>                         | ST                         | 119                 |
| <b>Mass, weighing</b>                 | WE                         | 131                 |
| <b>Mass, force</b>                    | FO                         | 135                 |
| <b>Pressure, fluids</b>               | PR                         | 151                 |
| <b>Pressure, sound</b>                | PS                         | 167                 |
| <b>Relative humidity</b>              | RH                         | 175                 |
| <b>Temperature and heat</b>           | TE                         | 179                 |
| <b>Time interval</b>                  | TI                         | 189                 |
| <b>Torque</b>                         | TO                         | 193                 |
| <b>Velocity, angular</b>              | VA                         | 201                 |
| <b>Velocity, linear</b>               | VL                         | 207                 |
| <b>In-house design</b>                |                            | 211                 |
| <b>Bibliography</b>                   |                            | 217                 |
| <b>Appendix – List of suppliers</b>   |                            | 223                 |
