# Stochastic Dynamical Systems

Concepts, Numerical Methods,  
Data Analysis

*Josef Honerkamp*

TRANSLATED BY  
*Katja Lindenberg*

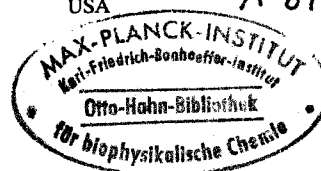

Josef Honerkamp  
Professor  
Albert-Ludwigs-Universität Freiburg  
Fakultät für Physik  
Herman-Herder-Str. 3  
D-7800 Freiburg/Br  
Germany

Translator:  
Katja Lindenberg  
Professor  
University of California, San Diego  
Department of Chemistry, 0340  
9500 Gilman Drive  
LaJolla, CA 92093

# Contents

<b>1 Stochastic Processes and Complex Systems</b>	<b>1</b>
<b>2 Random Variables</b>	<b>7</b>
2.1 Basic Concepts of Probability Theory	7
2.2 Characteristic Measures of a Distribution: Moments, Quantiles, Cumulants, Covariances And Correlations	18
2.3 Addition of Stochastic Variables, the Central Limit Theorem	24
2.4 The Generation of Random Numbers	28
<b>3 Analysis of Stationary Data</b>	<b>40</b>
3.1 Measurement of Moments	40
3.2 Comparison of Measures	54
3.3 The Principle of the Maximum Probability	68
3.4 Linear Regression Methods	74
3.5 Stochastic Approximation	87
<b>4 Deduction of Models from Data</b>	<b>90</b>
4.1 Nonparametric Regression: Smoothing Noisy Data with Spline Functions	90
4.2 Regularization Methods	95
4.3 Maximum Entropy Methods	100
4.4 Principal Component Analysis	113
4.5 Factor Analysis and Error-in-Variables Models	124

<b>5</b>	<b>Classification Methods</b>	<b>134</b>
5.1	Classifiers	135
5.2	Estimation of Parameters that Arise in Classifiers	140
5.3	Automatic Classification (Cluster Analysis)	141
5.4	Related Questions that Arise in the Context of a Classification	148
<b>6</b>	<b>Basic Equations for Stochastic Processes</b>	<b>159</b>
6.1	Markov Processes	159
6.2	The Master Equation	171
6.3	The Fokker-Planck Equation	172
6.4	Stochastic Differential Equations	179
<b>7</b>	<b>Master Equations</b>	<b>190</b>
7.1	Various Applications of the Master Equation	190
7.2	Boundaries and Boundary Conditions	193
7.3	Analytic Procedures for the Solution of the Master Equation	196
7.4	Calculation of a Stationary Distribution	204
7.5	The Mean First Passage Time	207
<b>8</b>	<b>Numerical Methods for the Solution of Master Equations</b>	<b>215</b>
8.1	Calculation of the Density: The Master Equation as a Differential Equation	216
8.2	Simulation of Trajectories	218
8.3	Simulation of Stationary Distributions and Expectation Values	232
8.4	Monte Carlo Methods in the Statistical Mechanics of Equilibrium States	236
<b>9</b>	<b>Stochastic Differential Equations: Analytical Procedures</b>	<b>243</b>
9.1	Examples of Stochastic Differential Equations from the Dynamics of Polymers	243
9.2	Boundaries of State Space and Boundary Conditions	252
9.3	Exact Solutions for a Diffusive Process with Linear Drift and Additive Noise	256
9.4	Stationary Solutions of the Fokker-Planck Equation	269
9.5	First Passage Times	279

<b>10 Numerical Methods For Stochastic Differential Equations</b>	<b>289</b>
10.1 Expansion in the Step Length $h$	289
10.2 Method for the Estimation of a Measurable Quantity	292
10.3 Stochastic Processes with Constraints	300
10.4 Numerical Evaluation of Stationary Moments	304
10.5 The Mean Square Convergence	304
10.6 Numerical Evaluation of the Mean Time to Reach a Threshold	309
<b>11 Functional Integrals in Stochastics</b>	<b>316</b>
11.1 Functional Integrals	316
11.2 Higher Moments and Their Generating Functional	320
11.3 The Response Function: The Linear Response of a System to External Forces	323
11.4 Gaussian Processes and the Gaussian Functional Integrals	329
<b>12 Perturbation Theory and Approximations that Go Further</b>	<b>336</b>
12.1 Perturbation Theory	336
12.2 Different Categories of Graphs	349
12.3 Nonperturbative Methods	358
<b>13 Time Series</b>	<b>371</b>
13.1 Examples of Time Series	372
13.2 Estimates of the Autocovariance and the Autocorrelation Function	382
13.3 Spectral Analysis	384
13.4 Tests	403
13.5 Operations on Time Series, Filters	408
<b>14 Linear Models for Stochastic Processes</b>	<b>412</b>
14.1 Conditional Estimators	412
14.2 Linear Stochastic Models	421
14.3 Quantities that can be Calculated in ARMA Models	435
14.4 The Kalman Filter	446
14.5 Estimation of the Parameters for ARMA Processes and Transfer Models	458
14.6 Parameter Identification in a State Space Model	482

<b>15 Point Processes</b>	<b>489</b>
15.1 Distribution and Cumulant Functions	489
15.2 The Generating Functional for Moments	493
15.3 Waiting Times	499
15.4 Gauss-Poisson Processes	502
15.5 Renewal Processes	504
<b>Appendix: Tables</b>	<b>509</b>
<b>References</b>	<b>518</b>
<b>Index</b>	<b>529</b>
