

# Microanalysis of Solids

Edited by

**B.G. Yacobi**

*EMTECH  
Toronto, Ontario, Canada*

**D.B. Holt**

*Imperial College  
London, England*

and

**L.L. Kazmerski**

*National Renewable Energy Laboratory  
Golden, Colorado*

Plenum Press • New York and London

# Contents

## PART I. INTRODUCTION

### 1. An Introduction to Microanalysis of Solids

*B. G. Yacobi and D. B. Holt*

1.1.	Introduction .....	3
1.2.	Electron Beam Techniques .....	6
1.3.	Ion Beam Techniques .....	9
1.4.	Photon Beam Techniques .....	10
1.5.	Acoustic Wave Excitation .....	14
1.6.	Tunneling of Electrons and Scanning Probe Microscopies .....	14
1.7.	Emerging Techniques .....	16
	References .....	21

## PART II. ELECTRON BEAM TECHNIQUES

### 2. Scanning Electron Microscopy

*B. G. Yacobi and D. B. Holt*

2.1.	Introduction to Basic Principles .....	25
2.2.	Interaction of Electrons with Solids .....	29
2.3.	The Emissive Mode .....	36
2.4.	Transmitted Electrons .....	42
2.5.	The X-ray Mode .....	44
2.6.	Cathodoluminescence Mode .....	45
2.7.	The Charge-Collection Mode .....	51
2.8.	The Electron Acoustic Mode .....	57
2.9.	Scanning Deep-Level Transient Spectroscopy .....	57
2.10.	Conclusions .....	60
	Bibliography .....	60
	References .....	61

**3. Transmission Electron Microscopy***A. J. Garratt-Reed*

3.1.	Introduction .....	65
3.2.	Fundamentals .....	66
3.3.	Interaction of Electrons with Matter, and Contrast .....	67
3.4.	Construction Details .....	75
3.5.	Microanalysis .....	87
3.6.	Examples .....	92
3.7.	Final Comments and Future Trends .....	95
3.8.	Further Reading .....	97

**4. Auger Electron Spectroscopy***L. L. Kazmerski*

4.1.	Introduction and Background .....	99
4.2.	Fundamental Principles .....	100
4.3.	Experimental Methods and Instrumentation .....	111
4.4.	Scanning Auger Electron Spectroscopy .....	120
4.5.	Chemical Analysis .....	126
4.6.	Sputtering and Depth Profiles .....	129
4.7.	Quantitative Analysis .....	135
4.8.	Summary .....	141
	References .....	142

**PART III. ION BEAM TECHNIQUES****5. Secondary Ion Mass Spectrometry***S. E. Asher*

5.1.	Introduction .....	149
5.2.	Technique .....	150
5.3.	Quantitative Analysis .....	159
5.4.	Sensitivity and Resolution .....	162
5.5.	Experimental Examples .....	166
5.6.	Related Techniques .....	169
5.7.	Future Trends .....	173
	References .....	175

**6. Applications of Megaelectron-Volt Ion Beams in Materials Analysis***P. Revesz and J. Li*

6.1.	Introduction to Rutherford Backscattering .....	179
6.2.	Physical Principles of Backscattering .....	181
6.3.	Forward Recoil Elastic Scattering .....	197
6.4.	Channeling .....	199
6.5.	Elastic Resonances .....	203
6.6.	Particle-Induced X-ray Emission .....	211
6.7.	Conclusions .....	213
	References .....	215

**PART IV. PHOTON BEAM TECHNIQUES****7. Confocal Microscopy***T. Wilson*

7.1.	Introduction .....	219
7.2.	The Confocal Optical System .....	220
7.3.	Alternative Forms of Detector .....	226
7.4.	Conclusions .....	230
	References .....	231

**8. X-ray Microscopy***A. G. Michette and A. W. Potts*

8.1.	Introduction .....	233
8.2.	X-ray Sources .....	235
8.3.	X-ray Optics .....	236
8.4.	X-ray Microscopes .....	237
8.5.	Applications .....	240
8.6.	The Future .....	244
	References .....	245

**9. X-ray Photoemission Spectroscopy***A. J. Nelson*

9.1.	Introduction and Background .....	247
9.2.	Fundamental Principles .....	248

9.3.	Experimental Considerations	253
9.4.	Quantitative XPS	264
9.5.	Summary	266
	References	266
<b>10.</b>	<b>Laser Ionization Mass Spectrometry</b>	
	<i>R. W. Odom and F. Radicati di Brozolo</i>	
10.1.	Introduction	269
10.2.	Instrumentation	270
10.3.	Applications	273
10.4.	Bulk Analysis	274
10.5.	Surface Analysis	275
10.6.	Laser Postionization	277
10.7.	Polymer Analysis	280
	References	283
<b>11.</b>	<b>Microellipsometry</b>	
	<i>R. F. Cohn</i>	
11.1.	Introduction	285
11.2.	Principles of Ellipsometry	286
11.3.	Microellipsometry	299
11.4.	Applications of Microellipsometry	308
11.5.	Conclusions	319
	References	320
<b>PART V. ACOUSTIC WAVE EXCITATION</b>		
<b>12.</b>	<b>Scanning Acoustic Microscopy</b>	
	<i>P. Muti and G. A. D. Briggs</i>	
12.1.	Introduction	327
12.2.	The Scanning Acoustic Microscope	328
12.3.	Contrast Theory	333
12.4.	Surface Acoustic Waves in Solids	337
12.5.	Quantitative Acoustic Microscopy	338

12.6.	Acoustic Images of Materials .....	341
12.7.	Conclusions .....	350
	References .....	353

## PART VI. TUNNELING OF ELECTRONS AND SCANNING PROBE MICROSCOPIES

### 13. Field Emission, Field Ion Microscopy, and the Atom Probe

*J. J. Hren and J. Liu*

13.1.	Introduction .....	359
13.2.	Field Electron Emission .....	360
13.3.	Field Ion Microscopy .....	371
	References .....	386

### 14. Scanning Probe Microscopy

*D. A. Grigg and P. E. Russell*

14.1.	Introduction to Scanning Probe Microscopy .....	389
14.2.	The Ultramicrometer .....	390
14.3.	The Topografiner .....	394
14.4.	The Scanning Tunneling Microscope .....	399
14.5.	Instrumentation .....	406
14.6.	STM Theory .....	428
14.7.	Scanning Force Microscope .....	430
14.8.	Magnetic Force Microscope .....	438
14.9.	Scanning Capacitance Microscope .....	439
14.10.	Near-Field Scanning Optical Microscope .....	440
14.11.	Future Trends .....	444
	References .....	444

<b>Index</b> .....	449
