CONTENTS

PREFACE xv

1. QUANTITATIVE DESCRIPTION OF ORIENTATIONAL ORDER: RIGID MOLECULES 1

C. Zannoni

Looking for a complete description 1
A simple case: cylindrical molecules in a uniaxial phase 5
The effect of symmetry 12
Ordering matrix 15
Orientational order parameters for more complex phases 18
Connection with experiment 20
Non-uniaxial phases 22
Cartesian treatment 22
Summary 24
Appendix 25
References 31

2. AN INTERNAL ORDER PARAMETER FORMALISM FOR NON-RIGID MOLECULES 35

C. Zannoni

Introduction 35
The internal order parameter formalism 38
Observables for a molecule with one internal rotor 43
Limiting cases 45
Relation to Emsley-Luckhurst formalism 46
Multi-rotor molecules 46
Summary 50
References 50

3. MOLECULAR FIELD THEORIES OF NEMATICS: SYSTEMS COMPOSED OF UNIAXIAL, BIAXIAL OR FLEXIBLE MOLECULES 53

G.R. Luckhurst

Introduction 53
The Maier-Saupe theory 56
Biaxial molecules 62
Flexible molecules: orientational order parameters 65
Flexible molecules: the thermodynamic properties 75
References 82

4. THE LANDAU-DE GENNES THEORY OF LIQUID CRYSTALS 85

G.R. Luckhurst

Introduction 85
Landau theory of second order phase transitions 86
The Landau-de Gennes theory of nematics 89
Pretransitional behaviour 93
A molecular approach 95
References 97

5. NMR SPECTRA IN LIQUID CRYSTALS THE PARTIALLY AVERAGED SPIN HAMILTONIAN 99

C.A. Veracini

Introduction 99
Macroscopic alignment 100
Spin Hamiltonian 102
Spherical tensors 103
Magnetic interactions in cartesian formalism 106
Dipolar coupling 109
Nuclear quadrupolar interaction 112
Anisotropy of the shielding tensor 114
Indirect couplings 117
References 118

6. STUDIES OF SOLUTES WITH INTERNAL ROTORS 123

C.A. Veracini and M. Longeri

Introduction 123
Theory 124
Approximate methods 127
Applications 128
Molecules with a single locked conformer 129
Molecules with two planar equivalent conformers 130
Molecules with non planar equivalent conformers 132

Molecules with two or more conformers 136
Molecules with methyl rotation 139
Molecules with ring puckering motions 140
Conclusions and perspectives 140
Appendix 141
References 143

7. MOLECULAR STRUCTURE FROM DIPOLAR COUPLING 147

P. Diehl

The basic equations 147
The procedure of structure determination 148
Differences between spectra of isotropic and of oriented molecules 149
Relations between direct couplings and molecular structure 150
The computer programs for structure determination 156
Types of molecules studied so far 157
Basic theory for vibration corrections 157
The continuum of directions with $S_{aa} = 0$ in oriented molecules; the $S_{aa} = 0$ cone 162
The use of satellites for increased sensitivity 164
The use of satellites in underdetermined cases 165
Possible structure precision 165
Limitation of structure precision due to anisotropy of the indirect coupling constants 166
Limitation of structure precision due to correlation 169
Vibration-rotation coupling 170
Mean-field deformation 172
Limitation of structure precision due to complex formation: the two-site approximation 175
Summary 177
References 178

8. ON THE ORIENTATION OF SMALL MOLECULES IN ANISOTROPIC SOLVENTS 181

C.A. de Lange, J.G. Snijders and E.E. Burnell

Introduction 181
Theory 182
Dipolar couplings 186
Quadrupolar couplings 187
The hydrogen molecule 188
The methane molecule 191
External field gradients 199
Solute-solvent interaction mechanisms 201
References 204

9. DIFFUSIVE AND COLLECTIVE MOTIONS IN LIQUID CRYSTAL PHASES 207

Giorgio Moro, Ulderico Segre and Pier Luigi Nordio

Molecular motions in liquid crystals 207
Motional processes and spin relaxation 208
Correlation functions 209
Projection operator techniques 211
Choice of the projection operator 213
The formal derivation of the diffusion equation 214
Explicit form of the diffusion equation for cylindrical molecules 219
Solution of the diffusion equations in liquid crystalline phases 221
Side-chain dynamics 225
Collective motions 225
References 229

10. DENSITY MATRIX FORMALISM FOR NMR STUDIES OF LIQUID CRYSTALS 231

Robert L. Vold

Introduction 231
Basic theory 232
Free precession 238
RF pulses: flip angles and phase shifts 241
Multiple quantum coherence 245
References 250

11. NUCLEAR SPIN RELAXATION 253

Regitze R. Vold

Introduction 253
Theoretical framework 254
A case study: one spin I = 1 260
Relaxation calculations 260
Relaxation measurements 265
Instrumental requirements 271
Results for systems with a single deuteron 273
Sample rotation 274
Multispin systems 277
Deuterium 277
^{13}C-H relaxation 280
Other nuclei 281
Conclusions 281
References 282

12. MULTIPLE QUANTUM NMR IN LIQUID CRYSTALLINE PHASES 289

Gary Drobny

Introduction 289
The averaging of magnetic interaction tensors 290
Multiple quantum NMR 293
Time domain cross sections 293
Projections of two dimensional spectra 297
The complexity of the multiple quantum spectra of an oriented chain 300
Multiple quantum NMR experiments on oriented chain 304
Spectral simulations 306
Discussion 310
Conclusion 311
References 313

13. DYNAMICS OF MOLECULAR PROCESSES BY NMR IN LIQUID CRYSTALLINE SOLVENTS 315

Z. Luz

Introduction 315
Dynamic ^{1}H NMR in liquid crystals 316
Ring inversion in s-trioxane 316
Bond shift in cyclooctatetraene 320
Bond rearrangement in bullvalene 323
Dynamic deuterium NMR in liquid crystals 324
Ring inversion of cyclohexane 324
Ring inversion in p-dioxane 328
Bond rearrangement in bullvalene 331
Ring inversion of bridged perinaphthalenes 332
Dynamic lineshapes in liquid crystalline solutions 333
Dynamic lineshape for $I = \frac{1}{2}$ systems 335
Application of group theory 337
Dynamic lineshapes for $I = 1$ nuclei 338
Summary and conclusions 339
References 340

14. DISCOTIC LIQUID CRYSTALS AND THEIR CHARACTERIZATION BY DEUTERIUM NMR 343

Z. Luz, D. Goldfarb and H. Zimmermann

Introduction 343
Chemical structure and classification of discotic mesophases 343
Deuterium NMR in discotic mesophases 348

Uniaxial discotic mesophases 354
Alignment in a magnetic field 354
Molecular order parameter 356
Chain conformation in the mesogen 356
Biaxial discotic mesophases 359
The D_{rd} mesophase 359
The D_t mesophase 364
Discotic mesophases as solvents 366
Molecular translational diffusion in discotics 371
References 374

15. MEASUREMENT OF ORIENTATIONAL ORDERING BY NMR 379

J.W. Emsley

Rigid solute molecules 379
Choice of interaction 380
Dipolar coupling 380
Quadrupolar splittings 382
Comparison with theoretical models 385
Non-rigid molecules 389
Location of axes 391
Local ordering matrices 393
The ordering of alkyl chains 396
Comparison with theory 401
Non-rigid solutes 405
Carbon-13 studies of orientational order 406
Conclusion 410
References 411

16. DETERMINATION OF BIAXIAL STRUCTURES IN LYOTROPIC MATERIALS BY DEUTERIUM NMR 413

J. William Doane

Introduction 413
Analysis of the spectral patterns 415
Hexagonal phase 416
Ribbon phase 416
Ripple phase 417
Discussion 418
References 418

17. PHASE BIAXIALITY IN THE CHOLESTERIC AND BLUE PHASES 421

J. William Doane

Introduction 421
^{2}H NMR spectral patterns 422

Distortion and spatial modulated diffusion 426
Blue phases 428
Discussion 428
References 429

18. PHASE BIAXIALITY IN SOME OF THE SMECTIC PHASES 431

J. William Doane

Introduction 431
General theoretical considerations 431
S_G phase 432
S_C phase 435
Discussion 439
References 439

19. ORIENTATIONAL ORDER PARAMETERS AND MECHANISMS OF PHASE BIAXIALITY 441

J. William Doane

Introduction 441
Ordering in uniaxial phases 441
Ordering in biaxial phases 443
Biaxial mechanism of the cholesteric phase 444
Biaxiality from rotational freeze-out parameters 446
Discussion 447
References 447

20. AMPHIPHILIC MOLECULES IN LYOTROPIC LIQUID CRYSTALS AND MICELLAR PHASES 449

J. Charvolin and Y. Hendrikx

Introduction 449
Relevant aspects of NMR 453
Order parameter curves 455
Infinite lamellae in lamellar phases 455
Infinite cylinders in hexagonal phases 457
Spheroïds in micellar phases 457
Oblate spheroïds in nematic phases 459
Discussion 460
Comments about the thermodynamics 464
Conclusion 466
References 467
Appendix 469

21. STRUCTURE OF THE HYDROPHOBIC-HYDROPHILIC INTERFACE IN LYOTROPIC LIQUID CRYSTALS: COUNTERION BINDING STUDIES 473

N. Boden and S.A. Jones

Introduction 473
Theory of counterion quadrupolar splittings 474
Sodium-23 studies 477
Non-ionic surfactants 477
Charged surfactants 478
Potassium-39 studies 481
Effects of water content and temperature 482
Effects of solubilization of alcohols 485
Effects of hydrocarbons 488
Chemical equilibrium model of counterion binding 490
Comment 494
References 494

22. SOLUBILIZATE-BILAYER INTERACTIONS IN LAMELLAR MESOPHASES 497

N. Boden and S.A. Jones

Introduction 497
Solubilization of alcohols 498
X-ray diffraction measurements 498
^{2}H NMR measurements 500
Solubilization of hydrocarbons 511
X-ray diffraction measurements 511
NMR measurements 517
Comparison of bilayer thickness as calculated from X-ray diffraction and 2H NMR measurements 520
Distribution of hydrocarbon solubilizates in the bilayer 520
Response of the bilayer structure to solubilizate 524
Appendix 1 526
X-ray diffraction measurements 526
The partial molecular surface area 527
Appendix 2 529
The calculation of the effective length of a hydrocarbon chain from its order profile 529
References 531

23. NMR OF LIQUID CRYSTALLINE LIPIDS IN BIOLOGICAL MEMBRANES 533

Ian C.P. Smith

Some characteristics of biological membranes 533
Deuterium NMR spectra of membranes 534
Acholeplasma Laidlawii B: a simple biological membrane 539
^{31}P NMR of membranes 552
Synopsis 562
References 563

SUBJECT INDEX 567
