

**AIP Conference Proceedings**  
Series Editor: Hugh C. Wolfe  
Number 109

**Random Walks and Their  
Applications in the  
Physical and Biological Sciences**  
(NBS/La Jolla Institute-1982)

Edited by  
**Michael F. Shlesinger**  
La Jolla Institute and  
Institute for Physical Science and Technology  
University of Maryland

and

**Bruce J. West**  
La Jolla Institute  
Center for Studies of Nonlinear Dynamics

**American Institute of Physics**  
New York 1984

## TABLE OF CONTENTS

Dedication .....	v
Preface .....	ix
Program .....	xvi
On the Vienna School of Statistical Thought E.W. Montroll.....	1
The Pearson Random Walk J.E. Kiefer and G.H. Weiss .....	11
Polymer Statistics and Universality: Principles and Applications of Cluster Renormalization F. Family.....	33
Random-Walk Model of Chain Polymer Adsorption Behavior at Critical Energy and Relation to a Reflecting Boundary Condition Robert J. Rubin.....	73
Weierstrassian and Lévy Random Walks, and the Spherical Model of Ferromagnetism with Long-Range Interactions F.T. Hioe.....	85
Stochastic Model for Exiton Lineshapes at Finite Temperature B.J. West and K. Lindenberg.....	111
Hopping Conduction from Multiple Scattering Theory and Continuous Time Random Walk to the Coherent Medium Approximation M. Lax and T. Odagaki .....	133
Random Walk Theory of Geminate Recombination H. Scher and S. Rackovsky .....	155
Continuous Time Random Walk Aspects in Reaction and Transport J. Klafter and A. Blumen.....	173
Random Walks, Transport and Dispersion in Porous Media M. Sahimi .....	189
A Self-Consistent Mode-Coupling Theory for Anderson Localization S. Mukamel .....	205
Kinetic Aspects of Ion Transport Through Neural Membrane J.R. Clay and M.F. Shlesinger .....	225
