TABLE OF CONTENTS

Introductory Lecture R. Dillemans	1
1. Dynamic Behaviour and Oscillating Problems in Synchronous Generators with a Superconducting Field-Winding H. Bischof and H.W. Lorenzen	7
2. Some Methods for the Reduction of Electromagnetically Excited Vibrations and Noise in Induction Machines Due to the Slot Openings K.J. Binns	27
3. Torsional Vibration in the Rotor of a Superconducting Turbogenerator J.R. Bumby and J.M. Wilson	35
4. Torsional Vibrations of Superconducting Generators H. Bischof and H.W. Lorenzen	59
5. Electromagnetic Influence on the Radial Vibrations of Two-Pole Induction Motors R. Belmans, A. Vandenput and W. Geysen	81
6. Design of Foundations for Alternating Current Machines with Respect to the Dynamic Effects: Experimental and Mathematical Analyses G. Desanghere	99
7. The Active Magnetic Bearing Enables Optimum Control of Machine Vibrations H. Habermann and M. Brunet	113
8. Analysis of Effect Damper Circuit Modelling and the Fault Clearing Process Has on Amplitude and Decay of Torsional Vibrations in Turbine-Generator Shafts Following Severe Disturbances on the Grid Supply T.J. Hammons	137
9. Transients of Induction Machines in Driving Systems P. Hantel and Ch. Troeder	169

10. Measurement of Induction Motor Torque Pulsations Due to Inverter Supply T. Lipo and M. Kramer	191
11. Determination of the No-Load Currents and the Associated Winding and Iron-Core Forces of Saturable Induction Machines for Sinusoidal and Nonsinusoidal Terminal Voltages E.F. Fuchs and D.J. Roesler	213
12. General Torsional Fatigue of Turbogroup Shafts Due to Electrical Disturbances - Part I: Electromechanical System: Modelisation - Computation of Torsional Stress M. Crappe, M. Delhay, Mpanda Mabwe, M. Renglet, L. Soenen, J.C. Steffens and J. Goossens	251
13. General Torsional Fatigue of Turbogroup Shafts Due to Electrical Disturbances - Part II: Determination of Shaft Fatigue J. Goossens, K. Steigleder, J.C. Steffens and J. Stubbe	287
14. Estimation and Measurement of Torque Vibrations in Synchronous Machines E.D. Goodman and G. Joos	315
15. CAE-Techniques for Calculating Natural Frequencies of Machine Stators R. Belmans, A. Vandenput and W. Geysen	331
16. Development of Parasitic Torques Leading to Shaft Vibrations in Induction Motors R.D. Findlay, A.A. Jimoh and B. Szabados	347
17. Scale Aspects of Electromagnetic Noise Emission by Cage Induction Machines H.C.J. De Jong	363
18. Results of Computer Simulation of Subsynchronous Resonance of Synchronous Generators J. Chatelain and B. Kawkabani	369
19. Mechanical and Electromagnetic Vibrations in Salient Poles Hydrogenerators T. Capurso and D. Laloy	389
20. How to Avoid Torque Vibrations at Low Speed in Inverter Fed Machines E. Agis	411
21. Measurements of Vibrations for Electrical Machines W. Stühler and A. El-Kafrawy	425
22. A Test Rig for Measurement of Vibrations of Electrical Rotating Machines J. Borel	447

23. Effects of Voltage/Current Harmonics on Noise Emission from Induction Motors
S.J. Yang 457
24. About the Multiples of Netfrequency in the Noise of Small Asynchronous Machines
U. Winter 469
25. Effects of Rotor Cage Asymmetry on the Performance of Three-Phase Induction Motors
S. Williamson, M.A.S. Abdel-Magied and A.C. Smith 485
26. Vibration Behaviour of Stators of Electrical Machines
S.P. Verma 499
27. The Electro-Mechanical Torsional Vibration Behaviour of A.C. Machines and Drives
A. Vandenput, R. Belmans and W. Geysen 515
28. On-Line Diagnostics of Large Induction Motors
W.T. Thomson, J.R. Cameron and A.B. Dow 545
