TABLE OF CONTENTS

Preface	V
Part 1. GENERAL PRINCIPLES OF PERCOLATION PROCESSES AND CHROMATOGRAPHIC APPLICATIONS	1
D. Tondeur Population migration and wave phenomena in percolation operations	3
A.E. Rodrigues Modeling of percolation processes	31
J. Villiermaux Theory of linear chromatography	83
P. Valentin Design and optimisation of preparative chromatographic separations	141
P. Le Goff and N. Midoux Energetics and cost optimization of preparative chroma- tography. An example: separation of two phenothiazines by liquid chromatography	197
A.J. de Rosset, R.W. Neuzil, D.B. Broughton Industrial applications of preparative chromatography	249

VIII

Part 2. MULTICOMPONENT PERCOLATION PROCESSES	283
H.K. Rhee Equilibrium theory of multicomponent chromatography	285
N.H. Sweed Nonisothermal and nonequilibrium fixed bed sorption	329
G. Klein Ion exchange and chemical reaction in fixed beds	363
Part 3. CYCLIC PERCOLATION OPERATIONS AND NOVEL APPLICATIONS	425
G. Klein Design and development of cyclic operations	427
P.C. Wankat Cyclic separation techniques	443
D. Tondeur Dual-step countercurrent processes	517
J. Villiermaux The chromatographic reactor	539
